

CONTENTS

<i>Boxed Material</i>	x
<i>Preface</i>	xi
<i>Symbols</i>	xiii
<i>Conversion Factors, Equations, and Units of Energy</i>	xv
<i>Definitions</i>	xvii
Chapter 1. Structure and Function	1
1.1 Phylogeny	3
1.2 Cell Structure	6
1.3 Summary	44
Study Questions	45
Chapter 2. Growth and Cell Division	53
2.1 Measurement of Growth	53
2.2 Growth Physiology	55
2.3 Cell Division	64
2.4 Growth Yields	70
2.5 Growth Kinetics	71
2.6 Steady State Growth and Continuous Growth	73
2.7 Summary	74
Study Questions	75
Chapter 3. Membrane Bioenergetics: The Proton Potential	83
3.1 The Chemiosmotic Theory	83
3.2 Electrochemical Energy	84
3.3 The Contributions of the $\Delta\Psi$ and the ΔpH to the Overall Δp in Neutrophiles, Acidophiles, and Alkaliphiles	90
3.4 Ionophores	91
3.5 Measurement of the Δp	93
3.6 Use of the Δp to Do Work	94
3.7 Exergonic Reactions that Generate a Δp	98
3.8 Other Mechanisms for Creating a $\Delta\Psi$ or a Δp	102
3.9 Halorhodopsin, a Light-Driven Chloride Pump	112
3.10 The Δp and ATP Synthesis in Alkaliphiles	112
3.11 Summary	112
Study Questions	114

Chapter 4. Electron Transport	120
4.1 Aerobic and Anaerobic Respiration	121
4.2 The Electron Carriers	121
4.3 Organization of the Electron Carriers in Mitochondria	125
4.4 Organization of the Electron Carriers in Bacteria	128
4.5 Coupling Sites	130
4.6 How a Proton Potential Might Be Created at the Coupling Sites: Q Loops, Q Cycles, and Proton Pumps	132
4.7 Patterns of Electron Flow in Individual Bacterial Species	137
4.8 Summary	144
Study Questions	145
Chapter 5. Photosynthesis	149
5.1 The Phototrophic Prokaryotes	149
5.2 The Purple Photosynthetic Bacteria	152
5.3 The Green Sulfur Bacteria (Chlorobiaceae)	157
5.4 Cyanobacteria and Chloroplasts	159
5.5 Efficiency of Photosynthesis	161
5.6 Photosynthetic Pigments	162
5.7 The Transfer of Energy from the Light-Harvesting Pigments to the Reaction Center	168
5.8 The Structure of Photosynthetic Membranes in Bacteria	169
5.9 Summary	169
Study Questions	170
Chapter 6. The Regulation of Metabolic Pathways	173
6.1 Patterns of Regulation of Metabolic Pathways	173
6.2 Kinetics of Regulatory and Nonregulatory Enzymes	175
6.3 Conformational Changes in Regulatory Enzymes	178
6.4 Regulation by Covalent Modification	178
6.5 Summary	179
Study Questions	179
Chapter 7. Bioenergetics in the Cytosol	181
7.1 High-Energy Molecules and Group Transfer Potential	181
7.2 The Central Role of Group Transfer Reactions in Biosynthesis	186
7.3 ATP Synthesis by Substrate Level Phosphorylation	188
7.4 Summary	194
Study Questions	195
Chapter 8. Central Metabolic Pathways	196
8.1 Glycolysis	198
8.2 The Fate of NADH	204
8.3 Why Write NAD ⁺ Instead of NAD, and NADH Instead of NADH ₂ ?	204
8.4 A Modified EMP Pathway in the Hyperthermophilic Archaeon <i>Pyrococcus furiosus</i>	204
8.5 The Pentose Phosphate Pathway	205
8.6 The Entner–Doudoroff Pathway	210
8.7 The Oxidation of Pyruvate to Acetyl–CoA: The Pyruvate Dehydrogenase Reaction	213
8.8 The Citric Acid Cycle	214
8.9 Carboxylations that Replenish Oxaloacetate: The Pyruvate and Phosphoenolpyruvate Carboxylases	219
8.10 Modification of the Citric Acid Cycle into a Reductive (Incomplete) Cycle During Fermentative Growth	220

8.11	Chemistry of Some of the Reactions in the Citric Acid Cycle	221
8.12	The Glyoxylate Cycle	223
8.13	Formation of Phosphoenolpyruvate	224
8.14	Formation of Pyruvate from Malate	225
8.15	Summary of the Relationships Between the Pathways	226
8.16	Summary	226
	Study Questions	228
Chapter 9.	Metabolism of Lipids, Nucleotides, Amino Acids, and Hydrocarbons	230
9.1	Lipids	230
9.2	Nucleotides	238
9.3	Amino Acids	243
9.4	Aliphatic Hydrocarbons	248
9.5	Summary	251
	Study Questions	253
Chapter 10.	Macromolecular Synthesis	255
10.1	DNA Replication, Chromosome Separation, and Chromosome Partitioning	255
10.2	RNA Synthesis	280
10.3	Protein Synthesis	293
10.4	Summary	306
	Study Questions	308
Chapter 11.	Cell Wall and Capsule Biosynthesis	318
11.1	Peptidoglycan	318
11.2	Lipopolysaccharide	323
11.3	Extracellular Polysaccharide Synthesis and Export in Gram-Negative Bacteria	328
11.4	Levan and Dextran Synthesis	333
11.5	Glycogen Synthesis	333
11.6	Summary	333
	Study Questions	334
Chapter 12.	Inorganic Metabolism	336
12.1	Assimilation of Nitrate and Sulfate	336
12.2	Dissimilation of Nitrate and Sulfate	338
12.3	Nitrogen Fixation	341
12.4	Lithotrophy	345
12.5	Summary	355
	Study Questions	356
Chapter 13.	C₁ Metabolism	359
13.1	Carbon Dioxide Fixation Systems	359
13.2	Growth on C ₁ Compounds Other than CO ₂ : The Methylotrophs	375
13.3	Summary	378
	Study Questions	380
Chapter 14.	Fermentations	383
14.1	Oxygen Toxicity	383
14.2	Energy Conservation by Anaerobic Bacteria	384
14.3	Electron Sinks	386
14.4	The Anaerobic Food Chain	386
14.5	How to Balance a Fermentation	387
14.6	Propionate Fermentation via the Acrylate Pathway	388
14.7	Propionate Fermentation via the Succinate–Propionate Pathway	389

14.8	Acetate Fermentation (Acetogenesis)	391
14.9	Lactate Fermentation	392
14.10	Mixed-Acid and Butanediol Fermentation	394
14.11	Butyrate Fermentation	397
14.12	<i>Ruminococcus albus</i>	400
14.13	Summary	401
	Study Questions	402
Chapter 15.	Homeostasis	404
15.1	Maintaining a ΔpH	404
15.2	Osmotic Pressure and Osmotic Potential	407
15.3	Summary	413
	Study Questions	414
Chapter 16.	Solute Transport	417
16.1	The Use of Proteoliposomes to Study Solute Transport	417
16.2	Kinetics of Solute Uptake	418
16.3	Energy-Dependent Transport	419
16.4	How to Determine the Source of Energy for Transport	429
16.5	Drug-Export Systems	430
16.6	Bacterial Transport Systems in Summary	431
16.7	Summary	431
	Study Questions	434
Chapter 17.	Protein Transport	438
17.1	The Sec System	439
17.2	The Translocation of Membrane-Bound Proteins	443
17.3	The <i>E. coli</i> SRP	445
17.4	Protein Translocation of Folded Proteins; the Tat System	445
17.5	Extracellular Protein Secretion	447
17.6	Folding of Periplasmic Proteins	457
17.7	Summary	459
	Study Questions	460
Chapter 18.	Microbial Development and Physiological Adaptation: Varied Responses to Environmental Cues and Intercellular Signals	467
18.1	Introduction to Two-Component Signaling Systems	469
18.2	Responses by Facultative Anaerobes to Anaerobiosis	474
18.3	Response to Nitrate and Nitrite: The Nar Regulatory System	480
18.4	Response to Nitrogen Supply: The Ntr Regulon	484
18.5	Response to Inorganic Phosphate Supply: The Pho Regulon	489
18.6	Effect of Oxygen and Light on the Expression of Photosynthetic Genes in the Purple Photosynthetic Bacterium <i>Rhodospirillum rubrum</i>	491
18.7	Response to Osmotic Pressure and Temperature: Regulation of Porin Synthesis	492
18.8	Response to Potassium Ion and External Osmolarity: Stimulation of Transcription of the <i>kdpABC</i> Operon by a Two-Component Regulatory System	494
18.9	Acetyl-Phosphate Is a Possible Global Signal in Certain Two-Component Systems	494
18.10	Response to Carbon Sources: Catabolite Repression, Inducer Expulsion, Permease Synthesis	496
18.11	Virulence Factors: Synthesis in Response to Temperature, pH, Nutrient, Osmolarity, and Quorum Sensors	502
18.12	Chemotaxis	509
18.13	Photoresponses	519

18.14 Aerotaxis	522
18.15 Introduction to Bacterial Development and to Quorum Sensing	522
18.16 Myxobacteria	523
18.17 <i>Caulobacter</i> Development: Control of DNA Replication and Cell Cycle Genes	534
18.18 Sporulation in <i>Bacillus subtilis</i>	539
18.19 Competence in <i>Bacillus subtilis</i>	550
18.20 Bioluminescence	552
18.21 Systems Similar to LuxR/LuxI in Nonluminescent Bacteria	561
18.22 Biofilms	564
18.23 Summary	570
Study Questions	572
 Chapter 19. How Bacteria Respond to Environmental Stress	599
19.1 Heat-Shock Response	599
19.2 Repairing Damaged DNA	603
19.3 The SOS Response	608
19.4 Oxidative Stress	611
19.5 Summary	613
Study Questions	614
 Index	617
