LIST OF TABLES	XI
LIST OF FIGURES	XIII
CONTRIBUTORS	XX
PREFACE	XXVII
ACKNOWLEDGMENTS	XXX
PERMISSIONS	XXXI

PART 1 INTRODUCTION

1 Ecology in Australia	2
The development of ecology	4
Biogeography and Australia's flora and fauna	8
2 The Evolution of Australia's Living Biota	13
The physical environment	13
Cretaceous (144–66 MYBP)	14
Cainozoic (66 MYBP to present)	18
Quaternary	27
Human arrival and extinction of the megafauna	30
Conclusion	32

PART 2 CLIMATE, SOILS, AND ENERGY

3 Climate	36
Large-scale climatic patterns in Australia	37
Long-distance transport of heat	37
Radiation	44
Latent and sensible heat flux	48
Heat balance of organisms	49
Summary	51
4 Soils	54
Description and classification	54
Physical and chemical components	55
Nutrient cycling	61
Availability of nutrients	67
5 Carbon Flow, Energy Transformations, and Productivity	73
Photosynthesis, respiration, and primary productivity	73
Secondary productivity: Eltonian pyramids and thermodynamics	79
Photosynthetic efficiency and the limits to net primary production	81
The dissipation of incident solar energy by plant communities	84

The measurement of primary production	85
Plants, carbon dioxide, and oxygen	88

PART 3 POPULATIONS AND COMMUNITIES

6 Population Characteristics and Dynamics	94
Population characteristics and parameters	94
Population density	95
Demography of populations	99
Population growth	104
7 Population Control, Regulation, and Extinction	112
Intraspecific competition	112
Population fluctuations and cycles	119
The concept of the metapopulation	120
Population viability and extinctions	121
8 Life-History Strategies	126
What are life-history strategies?	126
Size, growth, and development	127
Reproduction	128
Sex as a strategy	132
Parental care	135
Models of life-histories	136
9 Species Interactions: Direct Effects	140
Direct interactions	140
Competition	140
Mutualism	146
Contramensalism	148
Commensalism	152
Amensalism	155
10 Species Interactions: Indirect Effects	158
Indirect interactions	158
Interaction chains	160
Interaction modifications	167
Interaction webs	168
11 Ecological Diversity	171
Levels of diversity	172
Diversity and community ecology	179
Species composition and environmental health	180
Australia's biotic diversity	181
12 The Niche	184
Historical background and meaning	184
Community structure	188
Community assembly	191
Niches for plants	193

13 Succession, Disturbance, and Fire	195
The concept of disturbance	195
Changing views of succession	196
The ecology of disturbance	199
Fire	200

PART 4 AUSTRALIAN COMMUNITIES

14 Classification of Plant Communities	212
Classification of vegetation	213
Classification of vegetation in Australia today	219
Future directions	228
15 The Ecology of Australian Deserts	230
Characterising the deserts	230
How plants and animals persist and flourish	235
Influence of people	242
The future	245
16 Grasslands	247
A brief history of grassland	248
Grasslands in Australia	248
Why are grasslands treeless?	253
Fire and grazing in grassland	254
Fauna habitat	256
Conservation issues	257
17 Heaths and Low Open-forests	263
Distribution and some floristic characteristics	265
Environmental factors	268
Conservation status	276
18 Evolutionary Convergence and Sclerophylly in Mediterranean Regions	280
Soils	281
Vegetation	281
Evolutionary convergence	283
Sclerophylly—fuelling a controversy	284
Seasonality	286
Fire in Mediterranean regions	293
Weeds and other conservation issues	293
19 Woodlands and Open-forests of Eastern Australia	295
Structure of woodlands	296
Environment	297
Floristics	298
Ecological adaptations	305
Faunal communities	306

Dynamics	309
Utilisation	310
Conservation	312
20 Monsoonal Tropical Australia	315
Climate	315
Broad-scale vegetation patterns	316
Determinants of vegetation distribution and structure	318
Savanna behaviour	320
An overview of animal ecology	322
21 Forests	331
Distribution and composition of forest communities	331
Regeneration	338
Responses to fire	342
Forest wildlife	345
Relationships between wildlife and vegetation	347
Threats to forests	349
22 Alpine Landscapes	352
The physical environment	354
The Australian alpine biota	357
Alpine ecosystems, land use, and global change	366
Conclusion	367
23 Lakes and Rivers	370
Some taxonomy of lakes	371
Permanent freshwater lakes (and reservoirs) in temperate regions	374
Permanent rivers and streams in temperate regions	377
Permanent standing fresh water in semi-arid and arid regions	378
Temporary standing fresh water in semi-arid and arid regions	379
Permanent rivers in semi-arid regions	380
Temporary streams in semi-arid regions	380
Saline lakes	380
Meromictic lakes	382
The Australian contribution to global limnology and conservation	384
24 The Intertidal Zone	387
Living between the tides	387
The range of intertidal habitats	388
Distribution of intertidal habitats around Australia	391
Rocky shores	392
Sandy beaches	393
Mangroves	394
Saltmarshes	395
Seagrass beds	395
Intertidal zonation: a reality or myth?	396
Human interactions with intertidal habitats	400

PART 5 CONSERVATION AND MANAGEMENT

25 Indigenous Land Use	406
The first Australians	406
Aboriginal ecological impacts	409
Ecological changes since 1788	412
Traditional ecological knowledge	413
Indigenous rights to land and resources	413
Contemporary Aboriginal land use	417
Conservation of biodiversity	418
26 Biodiversity, Extinction, and Threats	421
What is biodiversity?	421
Why conserve biodiversity?	422
Australia's biological diversity	422
Causes of extinctions	427
Extinctions in recent times	428
Causes of decline and extinction in Australia	429
Assessment of conservation status	433
Managing threats to biodiversity and recovery	434
Conservation biology	436
27 Habitat Fragmentation	440
Changes to landscape pattern	440
Impacts of land use and land management	444
Species in fragmented landscapes	446
Consequences of fragmentation	448
Conservation in fragmented landscapes	454
28 Pest Plants and Animals	457
Defining and assessing pest status	457
The origins of Australian pest species	459
Mechanisms of establishment and spread	462
Environmental impacts	466
Economic impacts	469
Control of pest species	470
29 Salinity	474
The causes of salinity	475
Salinity as an environmental and agricultural issue	476
Managing natural resources in the Murray–Darling Basin	481
The responses to salinity	481
The knowledge base	485
30 Global Climate Change	489
The greenhouse effect and greenhouse gases	489
Some implications for ecosystems	495
The Framework Convention on Climate Change, and the Kyoto Protocol	499

31 El Niño	505
ENSO and decadal–multidecadal climatic variability	505
Ecological impacts	511
Summary	520
32 Ozone Depletion in Australia and the Antarctic	524
Ozone distribution and trends	524
UV levels and trends	528
Causes of ozone depletion	529
Ozone-depleting substances	530
Australia's role	533
Benefits of ozone protection measures	535
33 Conservation Policy in Australia	540
Historical and constitutional position	540
The development of Australian conservation policy	541
Australian federal agencies and bodies	549
Conclusion	550

PART 6 ECOLOGY AND RESEARCH

34 Sampling and Experimental Design	554
Biological systems, hypotheses, and sampling	554
Crucial steps in experiment design	555
GLOSSARY	564
BIBLIOGRAPHY	589
INDEX	634
