1 Why am I reading this book?

Book and chapter aims 1
1.1 My lecturer is a sadist! 1
1.2 Doing science: the big picture 3
1.2.1 Descriptive questions 3
1.2.2 Questions answered using a research hypothesis 4
Stage 1: developing research hypotheses 4
Stage 2: generating predictions 5
Stage 3: testing predictions 6
1.3 The process in practice 7
1.4 Essential skills for doing science 8
Analysing data 8
Developing hypotheses and predictions 8
Experimental design 9
Taking measurements 9
Critical evaluation 9
Health, safety, and ethical assessment 10
1.5 Types of data analysis 10
Summary 11
Self-help questions 12

2 Getting to grips with the basics

Chapter aims 13
2.1 Populations and samples 13
2.1.1 The sampling process 14
Sample size 15

Replication and pseudoreplication 15
Random sampling and bias 15
2.1.2 Sample error 16
2.2 Variation and variables 18
2.2.1 Identifying variables 19
2.2.2 Dependent and independent variables 20
2.3 Understanding data 21
2.3.1 Related and unrelated data 21
Related data: repeated and matched 22
Unrelated data 23
Distinguishing related and unrelated data 25
2.3.2 Levels of measurement 25
Nominal (categories) 25
Ordinal (ranks) 25
Scale (counts and measures) 26
2.4 Demystifying formulae 27
2.4.1 Squiggles, lines, and letters 27
2.4.2 Doing things in order 29
Summary 29
Self-help questions 30

3 Describing a single sample

Chapter aims 33
3.1 The single sample 33
3.2 Descriptive statistics 34
3.2.1 Central tendency 34
Mean 34
Median 35
Mode 36
3.2.2 Variability 36
Range 36
Interquartile range 37
Variance 37
Standard deviation 40
3.3 Frequency distributions 41
3.3.1 For nominal, ordinal, and discrete scale data 41
3.3.2 For continuous scale data 42
3.3.3 The normal distribution 45
3.3.4 Discrete data and the normal distribution 46
3.4 Pies, boxes, and errors 46
3.4.1 Pie charts as alternatives to frequency-distribution charts 47

3.4.2 Understanding boxplots 47
3.4.3 Introducing error bars 48
3.5 Example data: ranger patrol tusk records 49
3.6 Worked example: using SPSS 51
3.6.1 Descriptive statistics and frequency distributions 51
For nominal, ordinal, and discrete scale data 53
For continuous scale data 54
3.6.2 Pie charts 58
3.6.3 Boxplots 60
Summary 62
Self-help questions 63

4 Inferring and estimating

Chapter aims 65
4.1 Overview of inferential statistics 65
4.1.1 Why we need inferential statistics–a reminder 65
4.1.2 Uncertainty and probability 66
4.2 Inferring through estimation 67
4.2.1 Standard error (of the mean) 68
4.2.2 Confidence intervals (of the mean) 69
4.2.3 Error bars revisited 71
4.2.4 Comparing samples 72
4.3 Example data: ground squirrels 73
4.4 Worked example: using SPSS 74
4.4.1 Standard error and confidence intervals 74
4.4.2 Errorplots 77
Summary 78
Self-help questions 79

5 Overview of hypothesis testing

Chapter aims 81
5.1 Four steps of (statistical) hypothesis testing 81
5.1.1 Construct a (statistical) null hypothesis 82
5.1.2 Decide on a critical significance level 83
5.1.3 Calculate your statistic 84
5.1.4 Reject or accept the null hypothesis 84
Step 4: using critical-value tables 85
Step 4: using P values on computer output 85

5.2 Error and power 86
5.3 Parametric and nonparametric 87
5.3.1 Comparison of parametric and nonparametric 87
5.3.2 Checking for parametric criteria 88
5.3.3 Transformation 89
5.4 One- and two-tailed tests 89
Summary 91
Self-help questions 92

6 Tests on frequencies

Chapter aims 95
6.1 Introduction to chi-square tests 95
6.1.1 Only use frequency data 96
6.1.2 Types of chi-square test 96
6.1.3 When to use chi-square with caution 98
6.1.4 Alternatives to chi-square tests 98
6.1.5 Names and symbols for the chi-square statistic 99
6.2 Example data 99
6.2.1 One-way classification: Mendel's peas 99
6.2.2 Two-way classification: Mikumi's elephants 101
6.3 One-way classification chi-square test 103
6.3.1 When to use 104
6.3.2 Four steps 104
Using critical-value tables 105
Using P values on computer output 106
6.3.3 Worked examples: by hand 106
With expected according to a 1:1:1:1 Mendelian ratio (test of homogeneity) 106
With expected according to a 9:3:3:1 Mendelian ratio 107
6.3.4 Worked example: using SPSS 109
With expected according to a 1:1:1:1 Mendelian ratio (test of homogeneity) 110
With expected according to a 9:3:3:1 Mendelian ratio 112
6.3.5 Literature link: *weary* lettuces 114
6.4 Two-way classification chi-square test 115
6.4.1 When to use 116
6.4.2 Four steps 116
Using critical-value tables 117
Using P values on computer output 118
6.4.3 Worked example: by hand 118
6.4.4 Worked example: using SPSS 120
6.4.5 Literature link: treatment alliance 124

Summary 126
Self-help questions 127

7 Tests of difference: two unrelated samples

Chapter aims 129
7.1 Introduction to the *t*- and Mann–Whitney U tests 129
7.1.1 Variables and levels of measurement needed 129
7.1.2 Comparison of *t*- and Mann–Whitney U tests 130
7.1.3 The *t*-test and the parametric criteria 131
7.1.4 Alternatives to *t*- and Mann–Whitney U tests 131
7.2 Example data: dem bones 131
7.3 *t*-Test 133
7.3.1 When to use 134
7.3.2 Four steps of a *t*-test 134
Using critical-value tables 135
Using *P* values on computer output 135
7.3.3 Worked example: by hand 135
7.3.4 Worked example: using SPSS 138
7.3.5 Literature link: silicon and sorghum 141
7.4 Mann–Whitney U test 142
7.4.1 When to use 142
7.4.2 Four steps of Mann–Whitney U test 142
Using critical-value tables 143
Using *P* values on computer output 144
7.4.3 Worked example: by hand 144
7.4.4 Worked example: using SPSS 147
7.4.5 Literature link: Alzheimer's disease 149
Summary 150
Self-help questions 151

8 Tests of difference: two related samples

Chapter aims 153
8.1 Introduction to paired *t*- and Wilcoxon signed-rank tests 153
8.1.1 Variables and levels of measurement needed 154
8.1.2 Comparison of paired *t*- and Wilcoxon signed-rank tests 154
8.1.3 The paired *t*-test and the parametric criteria 155
8.1.4 Alternatives to and extensions of the paired *t*- and Wilcoxon signed-rank tests 155
8.2 Example data: bighorn ewes 156

8.3 Paired t-test 158
8.3.1 When to use 159
8.3.2 Four steps of a paired t-test 159
Using critical value tables 160
Using P values on computer output 160
8.3.3 Worked example: by hand 160
8.3.4 Worked example: using SPSS 163
8.3.5 Literature link: slug slime 165
8.4 Wilcoxon signed-rank test 167
8.4.1 When to use 167
8.4.2 Four steps of a Wilcoxon signed-rank test 167
Using critical-value tables 169
Using P values on computer output 169
8.4.3 Worked example: by hand 169
8.4.4 Worked example: using SPSS 171
8.4.5 Literature link: head injuries 173
Summary 174
Self-help questions 174

9 Tests of difference: more than two samples

Chapter aims 177
9.1 Introduction to one-way and Kruskal–Wallis Anova tests 177
9.1.1 Variables and levels of measurement needed 178
9.1.2 Comparison of one-way and Kruskal–Wallis Anovas 179
9.1.3 One-way Anova and the parametric criteria 179
9.1.4 Extensions of one-way and Kruskal–Wallis Anovas 179
9.1.5 The language of Anova 180
9.1.6 Multiple comparisons 181
9.2 Example data: nitrogen levels in reeds 181
9.3 One-way Anova test 184
9.3.1 When to use 184
9.3.2 Four steps of a one-way Anova 184
Using critical-value tables 186
Using P values on computer output 186
9.3.3 Worked example: using SPSS 187
9.3.4 Literature link: running rats 189
9.4 Kruskal–Wallis test 190
9.4.1 When to use 190
9.4.2 Four steps of a Kruskal–Wallis test 190
Using critical-value tables 192
Using P values on computer output 192
9.4.3 Worked example: using SPSS 193

9.4.4 Literature link: cooperating long-tailed tits 194
9.5 Model I and model II Anova 195
Summary 196
Self-help questions 196

10 Tests of relationship: regression

Chapter aims 199
10.1 Introduction to bivariate linear regression 199
10.1.1 Variables and levels of measurement needed 200
10.1.2 Linear model: scary–not! 201
10.1.3 The three regression questions 202
10.1.4 Added extras: how much is explained, and prediction 202
10.1.5 Regression and the parametric criteria 204
10.1.6 Extensions of bivariate linear regression and Anova 204
10.2 Example data: species richness 205
10.3 Regression test 207
10.3.1 When to use 207
10.3.2 Four steps of a regression test 207
Using critical-value tables 208
Using P values on computer output 209
10.3.3 Worked example: using SPSS for a regression test 210
10.3.4 Worked example: using SPSS to get the added extras 211
10.3.5 Literature link: nodules 214
10.4 Model I and model II regression 215
Summary 216
Self-help questions 217

11 Tests of relationship: correlation

Chapter aims 219
11.1 Introduction to the Pearson and Spearman correlation tests 219
11.1.1 Variables and levels of measurement needed 222
11.1.2 Comparison of Pearson's and Spearman's tests 222
11.1.3 Pearson and the parametric criteria 222
11.1.4 The correlation coefficient 223
11.1.5 Partial, multiple, and multivariate correlation 224
11.2 Example data: eyeballs 224
11.3 Pearson correlation test 225
11.3.1 When to use 227
11.3.2 Four steps of a Pearson correlation test 227

Using critical-value tables 228
Using P values on computer output 229
11.3.3 Worked example: using SPSS 229
11.3.4 Literature link: male sacrifice 232
11.4 Spearman correlation test 233
11.4.1 When to use 233
11.4.2 Four steps of a Spearman correlation test 233
Using critical-value tables 234
Using P values on computer output 235
11.4.3 Worked example: using SPSS 235
11.4.4 Literature link: defoliating ryegrass 237
11.5 Comparison of correlation and regression 238
Summary 239
Self-help questions 240

12 Choosing the right test and graph

Chapter aims 243
12.1 Introduction to choosing 243
12.2 Which test? 244
12.3 Which graph? 246
12.4 Worked examples: graphs using SPSS 247
12.4.1 Pie charts 248
12.4.2 Boxplots 251
Unrelated samples 251
Related samples 251
12.4.3 Errorplots 253
Unrelated samples 253
Related samples 254
12.4.4 Scatterplots 255
Summary 258
Self-help questions 259

Answers to self-help questions

Chapter 1 261
Chapter 2 261
Chapter 3 261
Chapter 4 261
Chapter 5 262

Chapter 6 262
Chapter 7 262
Chapter 8 262
Chapter 9 263
Chapter 10 263
Chapter 11 263
Chapter 12 263

Appendix I How to enter data into SPSS

Name 265
Type, width, and decimals 265
Label 265
Values 265
Missing 265
Columns 266
Align 266
Measure 266

Appendix II Statistical tables of critical values

χ^2 267
t 268
U 269
T 270
F 271
H 272
r 273
r_s 274
