List of boxes

xv

1 Where do I begin?

1.1	Data	1
1.2	Types of investigations	1
1.3	Aims, objectives, hypotheses	5
1.4	Items and observations	7
1.5	Populations	8
1.6	Sample	9
1.7	Populations, parameters, statistics, and samples	11
1.8	Treatments	12
1.9	Variation and variables	13

2 Experimental design

2.1	Evaluating published research	16
2.2	Have a go!	20
2.3	Questionnaires, focus groups, and interviews	36
2.4	Research and the law	46
2.5	Managing research	46

3 What to do with raw data

3.1	Types of data	51
3.2	Distributions of data	54
3.3	Summary statistics	60
3.4	Estimates of the central tendency	61
3.5	Estimates of variation	69

3.6	Coefficient of variation	74
3.7	Confidence limits	75
3.8	Parametric and non-parametric data	76
3.9	Transforming data	80

4 An introduction to hypothesis testing

4.1	What are the hypotheses to be tested?	83
4.2	Working out the calculated value of the test statistic	93
4.3	Finding the critical value of the test statistic	95
4.4	The rule	106
4.5	What does this mean in real terms?	107

5 Hypothesis testing: Do my data fit an expected ratio?

5.1	Chi-squared goodness of fit test	111
5.2	Heterogeneity in a goodness of fit test	119
5.3	Chi-squared test for association	123
5.4	Chi-squared test with one degree of freedom	127
5.5	G tests	133
5.6	The problem with small numbers	137
5.7	Experimental design, and chi-squared and G tests	139

6 Hypothesis testing: Associations and relationships

6.1	Correlations	147
6.2	Spearman's rank correlation	149
6.3	Pearson's product moment correlation	155
6.4	Regressions	158
6.5	Model I: Simple linear regression	160
6.6	Model II: Principal axis regression	166
6.7	Model II: Ranged principal axis regression	172
6.8	About regression lines	177
6.9	Experimental design, correlation, and regression	178

7 Hypothesis testing: Do my samples come from the same population? Parametric data

7.1	z test with unmatched data	182
7.2	t test (Student's <i>t</i> test) for unmatched samples	187
7.3	z and <i>t</i> tests for matched data	190
7.4	Introduction to parametric analysis of variance (ANOVA)	194
7.5	Parametric one-way ANOVA with equal numbers of replicates	197
7.6	Tukey's test following a parametric one-way ANOVA	201
7.7	Parametric two-way ANOVA with equal numbers of replicates	205
7.8	Tukey's test following a parametric two-way ANOVA	210
7.9	Two-way nested parametric ANOVA with equal replicates	212
7.10	Factorial three-way parametric ANOVA	218
7.11	Factorial three-way parametric ANOVA with replicates	225
7.12	Experimental design and parametric statistics	226

8 Hypothesis testing: Do my samples come from the same population? Non-parametric data

8.1	Mann–Whitney U test	235
8.2	Wilcoxon's matched pairs test	238
8.3	One-way non-parametric ANOVA (Kruskal–Wallis test): General hypotheses	241
8.4	One-way non-parametric ANOVA: Specific hypotheses	248
8.5	Two-way non-parametric ANOVA: General hypotheses	248
8.6	Two-way non-parametric ANOVA: Specific hypotheses	256
8.7	Scheirer–Ray–Hare test	258
8.8	Experimental design and non-parametric tests of hypotheses	260

9 Research, the law, and you

9.1	About the law	265
9.2	Health and safety	267
9.3	Access and sampling	278
9.4	Animal welfare	288

9.5	Working with humans	291
9.6	Discussion topics	298

10 Reporting your research

10.1	General format	302
10.2	Title	303
10.3	Abstract	303
10.4	Keywords	304
10.5	Acknowledgements	305
10.6	Introduction	305
10.7	Method	308
10.8	Results	312
10.9	Discussion	326
10.10	References	328
10.11	Appendix	334
10.12	Your approach to writing a report	334
	<i>Appendix a. How to choose a research project</i>	337
	<i>Appendix b. Which statistical test should I choose?</i>	341
	<i>Appendix c. Maths and statistics</i>	348
	<i>Appendix d. Tables of critical values for statistical tests</i>	359
	<i>Glossary</i>	373
	<i>References</i>	378
	<i>Index</i>	379
