1 Why be interested in death? 1

NICOLA J. McCARTHY

1. Introduction	1
2. Historically speaking	1
2.1 Morphological aspects	2
3. Where does apoptosis occur?	4
3.1 Primitive death	5
4. The importance of regulated cell death	6
4.1 The decision phase	8
4.2 The commitment phase	12
4.3 The execution phase	13
4.4 Summary	14
5. Models of apoptosis	14
6. Future work	16
References	16

2 Programmed cell death in *C. elegans*: the genetic framework 23

DING XUE, YI-CHUN WU, and MANISHA S. SHAH

1. Introduction	23
1.1 Advantages of using <i>C. elegans</i> for the study of programmed cell death	23
1.2 Origin and identity of dying cells in <i>C. elegans</i>	25
1.3 Roles of programmed cell death in <i>C. elegans</i>	25
1.4 Morphology and kinetics of programmed cell death in <i>C. elegans</i>	26
2. Genetic and molecular analysis of programmed cell death in <i>C. elegans</i>	27
2.1 The genetic pathway of programmed cell death in <i>C. elegans</i>	27
2.2 Genes involved in the killing process of programmed cell death	29

2.3 Genes involved in the specification of the cell death fate in specific cell types	38
2.4 Genes involved in the engulfment of cell corpses	42
2.5 Genes involved in the degradation of cell corpses	47
3. Conclusion and future perspectives	47
Acknowledgements	48
References	48
3 Genetic and molecular analysis of programmed cell death in <i>Drosophila</i>	56
ANDREAS BERGMANN and HERMANN STELLER	
1. Introduction	56
2. Description of programmed cell death during <i>Drosophila</i> development	57
3. The <i>H99</i> cell death genes: <i>reaper</i> , <i>hid</i> , and <i>grim</i>	61
4. Transcriptional regulation of the <i>reaper</i> gene	63
5. The <i>Drosophila</i> gene <i>hid</i> links RAS-dependent cell survival and apoptosis	65
6. <i>Drosophila</i> inhibitors of apoptosis (DIAP)	68
7. <i>Drosophila</i> caspases	71
8. How do the cell death regulators <i>rpr</i> , <i>hid</i> , and <i>grim</i> induce cell death in <i>Drosophila</i> ?	74
9. Where are the mammalian <i>rpr/hid/grim</i> homologues?	76
10. Alternative cell death paradigms in <i>Drosophila</i>	77
11. Phagocytosis—the final fate	79
12. Inhibition of pathological cell death	81
13. Final considerations	82
Acknowledgements	83
References	83
4 The caspases: consequential cleavage	93
NATALIE ROY and MICHAEL H. CARDONE	
1. Introduction	93
2. Caspase involvement in apoptosis	93
3. Class and structure	95
3.1 Three-dimensional structure	95
3.2 Substrate specificity	98
3.3 Prodomain structure	98

4. Caspase activation	100
4.1 Transactivation	101
4.2 Aggregation leading to autoprocessing	102
4.3 Caspase activation at the mitochondria	103
4.4 Conformational changes leading to activation	104
5. Caspase inhibition	105
6. Caspase substrates	108
6.1 Substrate discovery	108
6.2 Proteolysis regulating function	109
7. Functional diversity	116
8. Caspases in disease	119
9. Conclusion	121
References	122

5 Regulation of apoptosis by the Bcl-2 family of proteins 136

YOSHIHIDE TSUJIMOTO

1. Introduction	136
2. Discovery of <i>bcl-2</i> gene and its anti-apoptotic activity	136
3. Bcl-2 family proteins and regulation of apoptosis	137
4. Biochemical functions	139
4.1 Role in the mitochondria	140
4.2 Ion channels formed by the Bcl-2 family proteins	143
4.3 Sequestration of caspases by Bcl-2 and Bcl-x _L	144
4.4 Role of Bcl-2 localized on the endoplasmic reticulum and nuclear envelope	145
5. Regulation of Bcl-2 family proteins	145
5.1 Regulation of pro-apoptotic members of the Bcl-2 family through post-translational modification	145
5.2 Bcl-2 binding proteins	147
5.3 Bcl-2 family proteins as a convergence point for various life-death signals	148
6. Conclusion	148
Acknowledgements	148
References	149
Addendum: recent discoveries on Bcl-2 family proteins	
1. Mechanisms for breaking outer mitochondrial membrane permeability	156

2. Protein conducting pores for release of mitochondrial apoptogenic factors	156
3. BH3-only proteins serve as sensors for various death signals	157
4. Convergence point for life-or-death signals	157
References	158
6 Mitochondria in apoptosis: Pandora's Box	161
NAOUFAL ZAMZAMI, SANTOS A. SUSIN, and GUIDO KROEMER	
1. Introduction	161
2. Mitochondrial contributions to cell death	161
3. Cytochrome <i>c</i>	163
4. Mitochondrial caspases	165
5. Heat shock proteins	167
6. Apoptosis-inducing factor (AIF)	167
7. Additional factors and metabolic changes due to mitochondrial membrane permeabilization	170
8. Open questions	170
References	171
7 Apoptosis: lessons from cell-free systems	176
PAUL R. CLARKE	
1. Introduction	176
2. Studying the biochemistry of apoptosis	177
3. Development of cell-free systems for apoptosis	179
4. Extracts of apoptotic cells	180
4.1 Investigation of nuclear apoptosis	180
4.2 Identification of apoptotic DNA fragmentation and chromatin condensation factors	181
4.3 Oncogene-regulated apoptosis	184
5. Triggering apoptosis in non-apoptotic extracts	184
6. <i>Xenopus</i> egg extracts	186
6.1 Development of the <i>Xenopus</i> egg extract system	186
6.2 Control of apoptosis in <i>Xenopus</i> egg extracts	188
6.3 Analysis of specific processes in <i>Xenopus</i> egg extracts	193
7. Conclusions	193
Acknowledgements	194
References	194

8 Death signalling by the CD95/TNFR family of death domain containing receptors 200

NICOLA J. McCARTHY and MARTIN R. BENNETT

1. The death receptor superfamily	200
1.1 Introduction	200
1.2 TNF receptor superfamily	201
2. Ligands of the TNF receptor superfamily	209
2.1 Introduction	209
2.2 Summary	211
3. Adaptor proteins	212
3.1 FADD, TRADD, and RIP and RIP2	212
3.2 Daxx	214
3.3 Other CD95/TNF-R1 receptor interacting proteins	215
3.4 TRAFs: TNF receptor-associated factors	216
4. Regulation of death receptor-induced killing	217
4.1 The death-inducing signalling complex (DISC)	217
4.2 TNFR signalling pathways	219
4.3 Summary	220
5. Disease states with which death receptor signalling pathways are associated	220
5.1 Introduction	220
5.2 CD95 and AIDS	222
5.3 Cancer	223
6. Conclusion	224
References	224

9 Survival signalling by phosphorylation: PI3K/Akt sets the stage 235

THOMAS F. FRANKE

1. Introduction	235
2. Structure of Akt and Akt-related kinases	235
3. Rediscovery of a proto-oncogene	236
4. Akt as a direct downstream target of PI3K	239
5. PDK1-independent mechanisms of Akt activation	242
6. Negative regulators of PI3K/Akt signalling	242
7. Apoptosis suppression by Akt	243
8. Protein substrates of Akt	244
9. Substrate regulation by Akt-dependent phosphorylation	246

10. A BAD kinase makes good	247
11. Other substrates of Akt in apoptosis regulation	248
12. Conclusions	249
Acknowledgements	251
References	251
10 Viruses and apoptosis	262
DAVID L. VAUX	
1. Introduction	262
2. Origins of apoptosis	262
3. Detection of viruses	264
4. Viral pro-apoptotic genes?	264
5. Apoptosis as a defensive response to viral infection	265
6. Viral inhibition of apoptosis	265
6.1 CrmA	266
6.2 p35 and IAP	267
6.3 FLIPs	268
6.4 Anti-p53	269
6.5 Bcl-2 homologues	269
7. Inhibition of signal transduction pathways involved in defence	270
8. Cytotoxic T cells	271
8.1 Viral defence against CTL and other immune system defences	272
9. Conclusions	272
References	273
11 Cell death in the nervous system	278
MICHAEL D. JACOBSON and LOUISE BERGERON	
1. Cell death in the nervous system	278
2. Neurotrophins: extracellular survival and death signals to neurons	278
3. Signal transduction	279
3.1 Survival signalling	279
3.2 Death signals	283
3.3 Summary: convergence of survival and death signals	287
4. Bcl-2 family and mitochondria	288
5. Caspases	290
6. Neurodegenerative diseases and stroke	290
6.1 Ischaemic stroke	291
6.2 Polyglutamine repeat diseases	294

6.3 Alzheimer's disease	296
6.4 Amyotrophic lateral sclerosis (ALS)	299
6.5 Spinal muscular atrophy (SMA)	300
7. Conclusions	301
References	302
Index	317
