Preface ix

1 Biopsychology as a Neuroscience	1		
1.1 What Is Biopsychology?	4		
1.2 What Is the Relation Between Biopsychology and the Other Disciplines of Neuroscience?	5		
1.3 What Types of Research Characterize the Biopsychological Approach	7		
Human and Nonhuman Subjects	7		
Experiments and Nonexperiments	8		
Pure and Applied Research	11		
1.4 What Are the Five Divisions of Biopsychology?	12		
Psychopharmacology	13		
Neuropsychology	13		
Psychophysiology	14		
Comparative Psychology	15		
1.5 Converging Operations: How Do Biopsychologists Work Together?	16		
1.6 Scientific Inference: How Do Biopsychologists Study the Unobservable?	17		
1.7 What Is Bad Science and How Do You Spot It?	19		
Conclusion	23	Food for Thought	23
Key Terms	24	Additional Reading	25
2 Evolution, Genetics, and Development: Learning to Ask the Right Questions about the Biology of Behavior	26		
2.1 Thinking about the Biology of Behavior: From Dichotomies to Relations and Interaction	27		
Is It Physiological or Is It Psychological?	27		
Is It Inherited or Is It Learned?	28		
Problems with Thinking about the Biology of Behavior in Terms of Dichotomies	29		
2.2 Human Evolution	34		
Evolution and Behavior	35		
Human Evolution	37		
Evolution of the Human Brain	43		
2.3 Behavioral Genetics	46		
Mendelian Genetics	46		
Chromosomes	48		
Mechanisms of Gene Action	50		
The Simple-Systems Approach	54		
		The Genetics of Human Behavior:	
		The Minnesota Study of Twins	
		Reared Apart	54
2.4 Behavioral Development: The Interaction of Genetic Factors and Experience	57		
Selective Breeding of "Maze-Bright" and "Maze-Dull" Rats	57		
Phenylketonuria: A Single-Gene Metabolic Disorder	59		
Development of Birdsong	60		
Conclusion	63	Food for Thought	64
Key Terms	64	Additional Reading	65
3 The Anatomy of the Nervous System	66		
3.1 General Layout of the Nervous System	67		
The Major Divisions of the Nervous System	67		
The Meninges, the Ventricles, and the Cerebrospinal Fluid	68		
3.2 Neurons and Glia: The Building Blocks of the Nervous System	70		
The Structure of Neurons	72		
Glial Cells and Satellite Cells	75		
3.3 Neuroanatomical Directions and Planes	76		
3.4 The Spinal Cord	78		
3.5 The Five Major Divisions of the Brain	79		
3.6 The Major Structures of the Brain	80		
Myelencephalon	80		
Metencephalon	81		
Mesencephalon	81		
Diencephalon	82		
Telencephalon	84		
Review of the Gross Anatomy of the Brain	89		
3.7 Neuroanatomical Tracing: Finding out What is Connected to What	90		
Anterograde Tracing	91		
Retrograde Tracing	91		
Conclusion	91	Food for Thought	92
Key Terms	93	Additional Reading	96
4 Neural Conduction and Synaptic Transmission	97		
4.1 The Neuron's Resting Membrane Potential	98		
Recording the Membrane Potential	98		
The Resting Membrane Potential	99		
The Ionic Basis of the Resting Potential	99		

4.2	The Generation and Conduction of Postsynaptic Potentials	104	5.3	Invasive Physiological and Pharmacological Research Methods	139
4.3	The Integration of Postsynaptic Potentials and the Generation of Action Potentials	104		Stereotaxic Surgery 140	
4.4	The Conduction of Action Potentials	108		Lesion Method 140	
	Ionic Basis of Action Potentials 108			Electrical Stimulation 142	
	Refractory Period 109			Invasive Recording Methods 142	
	Conduction of Action Potentials 109			Psychopharmacological Methods 144	
	Conduction in Myelinated Axons 110			PART II: The Behavioral Research Methods of Biopsychology	146
	The Velocity of Axonal Conduction 111		5.4	Neuropsychological Testing	148
4.5	Synaptic Transmission: The Chemical Transmission of Signals from One Neuron to Another	111		Tests of General Intelligence 148	
	Structure of the Synapse 111			Tests of Language Lateralization 148	
	Mechanisms of Synaptic Transmission 112			Tests of Memory 149	
4.6	The Neurotransmitters	114		Tests of Language 150	
	The Amino Acid Neurotransmitters 114			Tests of Perceptual-Motor Function 150	
	The Monoamine Neurotransmitters 114		5.5	Biopsychological Paradigms of Animal Behavior	152
	Neuropeptides 116			Assessment of Species-Common Behaviors 152	
4.7	How Drugs Affect Synaptic Transmission	117		Traditional Conditioning Paradigms 154	
	Mechanisms of Agonistic Drug Effects 118			Seminal Animal Learning Paradigms 155	
	Mechanisms of Antagonistic Drug Effects 118			Conclusion 158	Food for Thought 158
	Agonists and Antagonists: Some Examples 119			Key Terms 159	Additional Reading 160
4.8	The Diversity of Neural Conduction and Synaptic Transmission	121	6 Human Brain Damage and Animal Models		161
	Not All Neurons Have Axons and Transmit Action Potentials! 121		6.1	Causes of Brain Damage	163
	Not All Synapses Between Neurons are Axodendritic or Axosomatic! 122			Brain Tumors 163	
	Many Neurons Release More than One Neurotransmitter! 122			Cerebrovascular Disorders 164	
	Not All Synapses Are Directed 122			Closed-Head Injuries 165	
	There Is More Than One Kind Of Receptor for Each Neurotransmitter! 123			Infections of the Brain 167	
	Not All Synapses Are Chemical! 124			Neurotoxins 167	
	Not All Neurons Remain at Rest Until Excited! 124			Genetic Factors 168	
	Conclusion 124	Food for Thought 125	6.2	Neuropsychological Diseases	169
	Key Terms 126	Additional Reading 127		Epilepsy 170	
5 What Biopsychologists Do: The Research Methods of Biopsychology		128		Parkinson's Disease 173	
	PART I: Methods of Studying the Nervous System	129		Huntington's Disease 174	
5.1	Methods of Visualizing Human Brain Damage	129		Multiple Sclerosis 176	
	Contrast X-rays 129			Alzheimer's Disease 177	
	Computerized Axial Tomography 130		6.3	Animal Models of Human Neuropsychological Diseases	178
	Magnetic Resonance Imaging 130			The Kindling Model of Epilepsy 179	
	Positron Emission Tomography 132			Amphetamine Model of Schizophrenia 181	
5.2	Recording Psychological Activity from the Surface of the Human Body	132		Conclusion 183	Food for Thought 184
	Scalp Electroencephalography 133			Key Terms 184	Additional Reading 185
	Event-Related Potentials and Signal Averaging 134		7 The Visual System: From Eye to Cortex		186
	Electromyography 135		7.1	Light Enters the Eye and Reaches the Retina	187
	Eye Movement 137		7.2	The Retina and the Translation of Light into Neural Signals	191
	Electrodermal Activity 137			Rod and Cone Vision 193	
	Cardiovascular Activity 138			Eye Movement 197	
				Visual Transduction: The Translation of Light to Neural Signals 198	
			7.3	From Retina to the Primary Visual Cortex	201

7.4	Seeing Edges	203			
	Lateral Inhibition and Contrast Enhancement	203			
	Receptive Fields of Visual Neurons	205			
	Spatial-Frequency Theory	211			
7.5	Seeing Color	215			
	Conclusion	220		<i>Food for Thought</i>	221
	Key Terms	221		<i>Additional Reading</i>	222
8	Mechanisms of Perception	223			
8.1	Introductory Concepts	224			
	Sensation and Perception	224			
	The Traditional Model of Sensory System Organization	225			
	The Hierarchical Organization of Sensory Systems	225			
8.2	Cortical Mechanisms of Vision	226			
	Blindsight: Seeing Without Seeing	227			
	Completion of Scotomas	228			
	Secondary and Association Cortex of the Visual System	229			
	Prosopagnosia	231			
	Perception of Subjective Contours	223			
8.3	Audition	234			
	Sound	234			
	The Ear	235			
	From the Ear to the Primary Auditory Cortex	237			
	Tonotopic Organization of the Primary Auditory Cortex	237			
	Sound Localization	240			
	Effects of Damage to Auditory Cortex	241			
8.4	Somatosensation: Touch and Pain	242			
	Cutaneous Receptors and Peripheral Pathways	242			
	The Two Major Ascending Somatosensory Pathways	245			
	Cortical Localization of Somatosensation	246			
	Effects of Somatosensory Cortex Damage in Humans	249			
	Somatosensory Agnosias	249			
	The Paradoxes of Pain	250			
	Mechanisms of Descending Pain Control	251			
	Phantom Limbs	253			
8.5	The Chemical Senses: Smell and Taste	253			
	The Olfactory System	255			
	The Gustatory System	256			
	Brain Damage and the Chemical Senses	258			
8.6	Selective Attention	260			
8.7	Conclusion: General Principles of Sensory System Organization	260			
	<i>Food for Thought</i>	262		<i>Key Terms</i>	262
	<i>Additional Reading</i>	264			
9	The Sensorimotor System	265			
9.1	Three Principles of Sensorimotor Function	268			
	The Sensorimotor System Is Hierarchically Organized	268			
	Motor Output Is Guided by Sensory Input	268			
	Learning Changes the Nature and Locus of Sensorimotor Control	269			
9.2	Posterior Parietal Association Cortex	269			
	Apraxia	270			
	Contralateral Neglect	271			
9.3	Secondary Motor Cortex	272			
	Supplementary Motor Area	273			
	Premotor Cortex	274			
9.4	Primary Motor Cortex	275			
	The Motor Homunculus	276			
	The Cortical Blood Flow Studies	277			
9.5	Cerebellum and Basal Ganglia	279			
	Cerebellum	279			
	Basal Ganglia	279			
9.6	Descending Motor Pathways	281			
	The Dorsolateral Corticospinal Tract and the Dorsolateral Corticorubrospinal Tract	281			
	The Ventromedial Corticospinal Tract and the Ventromedial Cortico-Brainstem Spinal Tract	282			
	The Two Dorsolateral Motor Pathways and the Two Ventromedial Pathways Compared	284			
9.7	Sensorimotor Spinal Circuits	285			
	Muscles	285			
	The Receptor Organs of Muscles	287			
	The Stretch Reflex	290			
	The Withdrawal Reflex	290			
	Reciprocal Innervation	291			
	Recurrent Collateral Inhibition	293			
	Walking and Running: A Complex Sensorimotor Reflex	293			
9.8	Central Sensorimotor Programs	294			
	<i>Epilogue</i>	297		<i>Food for Thought</i>	297
	<i>Key Terms</i>	297		<i>Additional Reading</i>	299
10	The Biopsychology of Eating and Drinking	299			
10.1	Digestion	300			
10.2	Early Studies of Eating: The Homeostatic Set-Point Model	302			
	The Glucostatic Theory	304			
	The Lipostatic Theory	305			
	The Hypothalamic Feeding Center	306			
	The Dual-Center Set-Point Model	308			
10.3	Reconsidering the Early Assumptions about the Biopsychology of Eating	310			
10.4	Current Research on the Biopsychology of Eating	311			
	The Influence of Palatability on Eating	311			
	The Effects of Variety on Palatability: Sensory-Specific Satiety	312			
	Re-examination of the Glucostatic Theory	312			
	Regulation of Body Fat: Regulatory Effect of Energy Expenditure	315			
	Role of the Gastrointestinal Tract in Satiety	316			
	The Regulation of Eating by Peptides	317			
	Hypothalamic Regulation of Eating: A Re-evaluation	318			
	Learning and Eating	320			

10.5	Current Biopsychological Theories of Eating: Incentives and Settling Points	322			
	Incentives and Eating	322			
	Settling Points and Eating	322			
10.6	Drinking and the Regulations of Body Fluids	327			
	The Dry-Mouth Theory of Thirst	327			
	Intracellular and Extracellular Fluid Compartments	327			
	The Kidneys: Regulation of Water and Sodium Levels	329			
10.7	Deprivation-Induced Drinking: Cellular Dehydration and Hypovolemia	332			
	Cellular Dehydration and Thirst	332			
	Hypovolemia and Thirst	334			
	Drinking Produced by Naturally Occurring Water Deficits	338			
10.8	Spontaneous Drinking: Drinking in the Absence of Water Deficits	339			
	Flavor	339			
	Food	339			
	Learning	339			
10.9	Drinking and Satiety	340			
	Drinking and Sensory-Specific Satiety	341			
10.10	Conclusion: A Biopsychological Perspective of Anorexia Nervosa	343			
	Anorexia Nervosa	343			
	<i>Food for Thought</i>	344			
	<i>Key Terms</i>	345			
	<i>Additional Reading</i>	346			
11	Hormones and Sex	347			
	The Men-Are-Men-and Women-Are-Women Attitude	348			
11.1	The Neuroendocrine System	348			
	Glands and Hormones	348			
	The Gonads	349			
	The Gonadal Hormones	350			
	Sex Hormones of the Adrenal Cortex	350			
	The Hormones of the Pituitary	351			
	Female Gonadal Hormone Levels Are Cyclic; Male Gonadal Hormone Levels Are Steady	352			
	Neural Control of the Pituitary	352			
	Control of the Anterior and Posterior Pituitary by the Hypothalamus	352			
	The Isolation and Synthesis of Hypothalamic Hormones	354			
	Gonadotropin-Releasing Hormone	355			
	Feedback in the Neuroendocrine System	355			
	Pulsatile Hormone Release	356			
	A Summary Model of Gonadal Endocrine Regulation	357			
11.2	Hormones and Sexual Development	357			
	Fetal Hormones and the Development of the Reproductive Organs	358			
	Perinatal Hormones and the Differentiation of the Brain	361			
	Perinatal Hormones and Behavioral Development	363			
	Puberty: Hormones and the Development of Secondary Sex Characteristics	364			
	Three Cases of Exceptional Human Sexual Development	367			
11.3	The Effects of Gonadal Hormones on Adults	371			
	Male Reproduction-Related Behavior and Testosterone	371			
	Gonadal Hormones and Female Reproduction-Related Behavior	373			
	Anabolic Steroids and Athletes	375			
11.4	The Hypothalamus and Sexual Behavior	376			
	Structural Differences Between the Male Hypothalamus and the Female Hypothalamus	376			
	The Hypothalamus and Male Sexual Behavior	378			
	The Hypothalamus and Female Sexual Behavior	378			
	Hormones, The Hypothalamus, and Sexual Preference	379			
	A Difference in the Brain of Homosexuals and Heterosexuals?	380			
	<i>Conclusion</i>	381			
	<i>Key Terms</i>	382			
	<i>Food for Thought</i>	382			
	<i>Additional Reading</i>	384			
12	Sleep, Dreaming, and Circadian Rhythms	385			
12.1	The Physiological and Behavioral Correlates of Sleep	387			
	The Three Standard Psychophysiological Measures of Sleep	387			
	The Five Stages of Sleep EEG	388			
12.2	REM Sleep and Dreaming	390			
	Testing Common Beliefs about Dreaming	391			
	The Interpretation of Dreams	392			
	Lucid Dreams	392			
12.3	Why Do We Sleep?	393			
	Recuperative and Circadian Theories	393			
12.4	Circadian Sleep Cycles	395			
	Free-Running Circadian Sleep-Wake Cycles	395			
	Jet Lag and Shift Work	397			
12.5	Effects of Sleep Deprivation	398			
	Selective Sleep Deprivation	401			
12.6	Recuperation and Circadian Models Combined	403			
12.7	The Physiological and Neurochemical Bases of Sleep	405			
	The Reticular-Activating-System Theory of Sleep	405			
	Three Important Discoveries about the Neural Basis of Sleep	407			
	The Structures of the Brain that Have Been Implicated in Sleep and Dreaming	408			
12.8	Hypnotic and Antihypnotic Drugs	414			
	Hypnotics	414			
	Antihypnotics	415			
	Endogenous Sleep Factors	415			
12.9	Sleep Disorders	416			
	Insomnia	416			
	Hypersomnia	417			

12.10 Conclusion: The Effects of Sleep Reduction	418		
<i>Food for Thought</i>	420	<i>Key Terms</i>	421
<i>Additional Reading</i>	422		
13 Drug Abuse and Reward Circuits in the Brain	423		
13.1 The Basic Principles of Drug Action	424		
Drug Administration and Absorption	424		
Penetration of the Central Nervous System by Drugs	425		
Mechanisms of Drug Action	425		
Drug Metabolism and Elimination	425		
Drug Tolerance	426		
Drug Withdrawal and Physical Dependence	430		
Addiction, Physical Dependence, and Psychological Dependence	430		
13.2 Five Commonly Abused Drugs	431		
Tobacco	431		
Alcohol	432		
Marijuana	434		
Cocaine	437		
The Opiates: Heroin and Morphine	438		
Comparison of the Hazards of Tobacco, Alcohol, Marijuana, Cocaine, and Heroin	441		
The Drug Dilemmas: Striking the Right Balance	442		
13.3 Biopsychological Theories of Addiction and Reward Circuits in the Brain	444		
Physical-Dependence Theories of Addiction	444		
Positive-Incentive Theories of Addiction	445		
The Intracranial-Self-Stimulation Phenomenon	446		
The Medial Forebrain Bundle and Intracranial Self-Stimulation	448		
The Mesotelencephalic Dopamine System	448		
The Mesotelencephalic Dopamine System and Intracranial Self-Stimulation	450		
The Mesotelencephalic Dopamine System and the Rewarding Effects of Addictive Drugs	451		
<i>Conclusion</i>	453	<i>Food for Thought</i>	455
<i>Key Terms</i>	455	<i>Additional Reading</i>	456
14 Memory and Amnesia	457		
14.1 The Amnesic Effects of Bilateral Medial-Temporal Lobectomy and the Unfortunate Case of H.M.	458		
Early Theories of Memory Storage	458		
Bilateral Medial-Temporal Lobectomy	460		
H.M.'s Postsurgical Memory Deficits	461		
The Formal Assessment of H.M.'s Anterograde Amnesia	462		
Other Cases of Bilateral Medial-Temporal Lobectomy	465		
The Influence of H.M.'s Case on the Search for the Neural Basis of Memory	466		
The Case of R.B.: The Hippocampus and Medial-Temporal-Lobe Amnesia	467		
14.2 The Amnesia of Korsakoff's Syndrome	468		
Does Medial Diencephalic Damage Cause the Amnesia Observed in Korsakoff Patients?	469		
		The Cases of N.A. and B.J.	469
		The Contribution of Prefrontal Damage to Korsakoff Amnesia	470
14.3 The Amnesia of Alzheimer's Disease	471		
14.4 The Amnesia after Closed-Head Injury	472		
Electroconvulsive Shock and Gradients of Retrograde Amnesia	473		
14.5 Animal Models of Brain-Damage-Produced Amnesia	477		
Medial-Temporal-Lobe Amnesia: Testing Neuroanatomical Hypotheses in Monkeys and Rats	479		
Medial-Temporal-Lobe Lesions and Retrograde Amnesia in Monkeys	482		
Diencephalic Amnesia in Monkeys and Rats	482		
Memory Deficits in Monkeys with Prefrontal Cortex Damage	484		
14.6 Current Theoretical Issues in the Study of Memory and Amnesia	486		
Where Are Memories Stored?	486		
Are There Different Systems for Explicit and Implicit Memory?	486		
Does Amnesia Reflect a Deficit in Encoding, Storage or Retrieval?	488		
Are the Amnesias Associated with Medial-Temporal-Lobe Damage and Medial Diencephalic Damage Distinct from One Another?	489		
What Does the Hippocampus Do?	489		
14.7 Conclusion: The Irony Case of R.M.	492		
<i>Food for Thought</i>	492	<i>Key Terms</i>	493
<i>Additional Reading</i>	494		
15 Neuroplasticity: Development, Learning, and Recovery from Brain Damage	495		
15.1 Neural Development	496		
Induction of the Neural Plate	497		
Neural Proliferation	498		
Migration and Aggregation	498		
Axon Growth and the Formation of Synapses	500		
Neuron Death and Synapse Rearrangement	505		
15.2 The Neural Bases of Learning in Simple Systems	509		
Nonassociative and Associative Learning in the Gill-Withdrawal Reflex Circuit of Aplysia	510		
Long-Term Potentiation in the Mammalian Hippocampus	515		
15.3 Neural Degeneration, Regeneration, and Reorganization	521		
Neural Degeneration	521		
Neural Regeneration	523		
15.4 Neurotransplantation in the Central Nervous System	527		
The Modern Era of Research on CNS Neurotransplantation	528		
Promotion of Regeneration with CNS Transplants	530		

The Transplantation of Neural Replacement
Parts in the Brain 531

Conclusion 533 *Food for Thought* 534
Key Terms 534 *Additional Readings* 535

16 Lateralization, Language, and the Split Brain 536

16.1 Laterilization of Function 538

Aphasia and Unilateral Brain Damage 538
Speech Laterality and Handedness 539
The Sodium Amytal Test 539
The Dichotic Listening Test 540
Other Tests of Language Laterality
in Healthy Subjects 540
Sex Differences in Lateralization of Function 542

16.2 Studying Lateralization of Function in Split-Brain Patients 542

The Groundbreaking Experiment of Myers
and Sperry 543
Commissurotomy in Human Epileptics 545
Evidence That the Hemispheres of Split-Brain
Patients Function Independently 547
Cross-Cuing 548
Learning Two Things at Once 548
Comparing the Abilities of the Left and Right
Hemispheres of Split-Brain Subjects 550
Two Theories of Cerebral Asymmetry 552
Lateralization of Function and Split-Brains:
Fact or Fiction? 554

16.3 The Cortical Localization of Language 554

Historic Antecedents of the Wernicke-Geschwind
Model 555
The Wernicke-Geschwind Model 557
Evaluation of the Wernicke-Geschwind Model 558
The Effects of Brain Damage on Language-Related
Abilities 559
Cortical Stimulation and the Localization
of Language 562
Language Laterality and Neuroanatomical
Asymmetry 564
Cognitive Neuroscience: Reading Aloud
with the Right Hemisphere 565
PET Scans During Language-Related Activities 567

Conclusion 570 *Food for Thought* 570
Key Terms 571 *Additional Reading* 572

17 The Biopsychology of Emotions and Mental Illness 573

17.1 Biopsychology of Emotions: Early Progress 574

The Expression of Emotions in Humans
and Other Animals 574
The James-Lange Theory of Emotions 575

The Cannon-Bard Theory of Emotions 576
Sham Rage 577
The Limbic System 578
The Kluver-Bucy Syndrome 578

17.2 Emotions and the Autonomic Nervous System 579

Psychophysiological Methods of Lie Detection 581

17.3 Emotions and Facial Expression 582

Facial Expression and Deception 583
Feedback of Facial Expression 584
Unobservable Facial Expression and Emotion 584

17.4 Lateralization and Localization of Human Emotions 585

The Effects of Brain Damage on the Experience
and Expression of Human Emotion 586
The Effects of Brain Damage on the Recognition
of Human Emotion 587

17.5 Stress and Health 589

Stress and Psychosomatic Disorders:
Gastric Ulcers 590
Psychoneuroimmunology: Stress
and the Immune System 591

17.6 Aggression, Defense, and Anxiety 594

Types of Aggressive and Defensive Behavior 595
The Concept of Target Sites 597
Mechanisms of Aggression and Defense 598
Human Aggression, the Amygdala,
and Psychosurgery 600
Testosterone and Aggression 601
Ethoexperimental Models of Anxiety 602

17.7 Biopsychology of Schizophrenia and Affective Disorders 604

Schizophrenia 604
The Genetics of Schizophrenia 605
The Discovery of the First Two
Antischizophrenic Drugs 605
The Dopamine Theory of Schizophrenia 606
Dopamine Receptors and Antischizophrenic
Drugs 607
Current Research on the Dopamine Theory
of Schizophrenia 608
Affective Disorders 610
The Genetics of Affective Disorders 611
The Discovery of Antidepressant Drugs:
The Monoamine Oxidase Inhibitors 611
The Tricyclic Antidepressants 611
The Monoamine Hypothesis Depression 612
Challenges to the Monoamine Theory
of Depression 612
Lithium: The Wonder Metal 613

Conclusion 613 *Food for Thought* 614
Key Terms 614 *Additional Reading* 616
