PART 1 Basic Mechanisms of Genome Rearrangement in Bacteria

- 1 Mechanisms of homologous recombination in bacteria 3
Marie-Agnès Petit
- 2 Introduction to site-specific recombination 33
Makkuni Jayaram and Ian Grainge
- 3 Site-specific recombination by the serine recombinases 83
Sally J. Rowland and W. Marshall Stark
- 4 Mobile introns and retroelements in bacteria 121
Steven Zimmerly

PART 2 Horizontal Gene Transfer and Genome Plasticity

- 5 The F-plasmid, a paradigm for bacterial conjugation 151
Michael J. Gubbins, William R. Will, and Laura S. Frost
- 6 The conjugative transposons: Integrative gene transfer elements 207
Adam P. Roberts and Peter Mullany
- 7 Competence for genetic transformation 235
Irena Draskovic and David Dubnau

PART 3 Biological Consequences of the Mobile Genome

8 Phase variation and antigenic variation	277
<i>Richard Villemur and Eric Déziel</i>	
9 Pathogenicity islands	323
<i>Bianca Hochhut and Jörg Hacker</i>	
10 Biological consequences for bacteria of homologous recombination	351
<i>Diarmaid Hughes and Tobias Norström</i>	
11 Horizontal gene transfer and bacterial genomic legacies	385
<i>James R. Brown</i>	
<i>Index</i>	415
