

Contents

1. The Cell

Historical, Cell Theory, What is Cell ? Modern Concept of Cell—the Membranes, the Microtubules or Fibres, the Granules, Shape and Size, Cell Structure—Cell Wall, Cytosome, Categories of Cell Components, Kinds of Cellular Organization, Prokaryotic Cells, Difference between Prokaryotic and Eukaryotic cells. 1—24

2. Protoplasm

Physical Nature—Protoplasm as a colloidal system, Protoplasm as a structureless mass, Other properties, Chemical Nature, Organic Constituents—Proteins, Carbohydrates, Lipids, Enzymes, Regulatory substances, Nucleic acids and Inorganic Constituents. 25—60

3. Cell Metabolism

Cell Metabolism, Energy cycle, Energy reservoir, Aspects of Cell Metabolism—Entrance of Substances across membrane, Anabolic Processes—Biosynthesis of Carbohydrates, Biosynthesis of Proteins, Biosynthesis of Lipids, Biosynthesis of Nucleic acids, Catabolic Process—Catabolism of Carbohydrates, Catabolism of Lipids and Catabolism of Proteins. 61—104

4. Cell Membrane

Plant Cell Wall—Chemical Nature of Cell Wall, Plasma Membrane—Morphology of Plasma Membrane, Ultra Structure of Plasma Membrane, Theories of Membrane models, Chemical Composition of Plasma Membrane,

Modification of Plasma Membrane, Physiology of Plasma Membrane. 105-129

5. Nucleus

Position, Shape, Size and Number, Ultra Structure of Nucleus, Chemical Composition of Nucleus. 130-141

6. Chromosomes

Number of Chromosomes, Shape and Size, Structure of Chromosome—Pellicle and Matrix, Chromatids, Chromomeres, Centromere, Secondary Constriction, Satellite Bodies, Heteropycnosis, Ultra Structure of Chromosome, Folded Fibre, Model of Chromosome, Synaptonemal Complex (SC), Chemical Composition of Chromosomes, Giant Chromosomes—Lampbrush Chromosomes, Polytene Chromosomes. 142-157

7. Mitochondrion

Historical, Morphology of Mitochondria—Position, Number, Shape and Size, Ultra-Structure, Kinds of Cristae, Chemical Composition of Mitochondria, Functions of Mitochondria—Oxidation of Carbohydrates, Synthesis of ATP from a Molecule of Glucose, Main Lines of Electron Transfer, Origin of Mitochondria. 158-176

8. Golgi Complex

Historical, Terminology of Golgi Material, Morphology of Golgi Complex, Chemical Nature of Golgi Complex, Functions of Golgi Complex. 177-183

9. Endoplasmic Reticulum

Endoplasmic Reticulum—Structure of Endoplasmic Reticulum, Ultra Structure of Endoplasmic Reticulum, Kinds of Endoplasmic Reticulum, Functions of Endoplasmic Reticulum, Ribosomes—Types of Ribosomes, Structure of Ribosomes, Ultra Structure of Ribosomes, Chemical Composition. 184-197

10. Lysosomes

Shape and Size, Structure of Lysosomes, Kinds of Lysosomes, Chemical Nature of Lysosomes, Origin of Lysosomes, and Functions of Lysosomes. 198—203

11. Centrosomes

Centrioles, Centrosphere, Chemical Composition, Functions of Centrosome. 204—206

12. Plastids

Kinds of Plastids, Shape and Size of Plastids, Ultrastructure of Plastids, Origin and Development of Plastids, Chemical Composition of Plastids, Functions of Plastids, 207—214

13. Cilia, Flagella and Basal Bodies

Cilia and Flagella—Ultrastructure, Basal Bodies, Structure, Zone of Transition Rootlets, Chemical Composition of Cilia and Flagella, Movement of Cilia and Flagella. 215—221

14. Cell Division : Mitosis

Types of Cell Division, Mitosis—Preparative stage, Distributive stage—Prophase, Metaphase, Anaphase, Telophase, Theories of Cytokinesis, Abnormalities in Mitosis, Cytoplasmic events, Spindle Fibres, Centrioles. 222—236

15. Cell Division : Meiosis

Heterotypic Division—First Prophase, First Metaphase, First Anaphase, First Telophase, Interkinesis, Homeotypic Division, Second Prophase, Second Metaphase, Second Anaphase, Second Telophase, Differences between Meiosis and Mitosis. 237—249

16. Gametogenesis

Spermatogenesis—Formation of Spermatids, Spermiogenesis, Structure of Mature Spermatozoon, Oogenesis. 250—259

17. Fertilization and Reproduction

Fertilization—Activation of ovum, Insemination, Sperm-egg association, Amphimixis, Polarity of Ovum, Kinds of Eggs. Reproduction—Somatogenic Reproduction, Cytogenic or Balastogenic Reproduction, Significance of Sexual Reproduction. 260—270

18. Parthenogenesis

Artificial Parthenogenesis, Natural Parthenogenesis—Arrhenotoky (Haploid Parthenogenesis), Thelytoky (Diploid Parthenogenesis), Meiotic Thelytoky, Ameiotic Thelytoky, Peculiar types of Thelytoky, Significance of Parthenogenesis. 271—279

Important Questions 280—282

Books Recommended for Further Reading. 283
