

Contents

Preface.....	xi
--------------	----

Bio-networks

1. Dynamics of Scale-Free Semi-Synchronous Boolean Networks	1
<i>M. Giacobini, M. Tomassini, P. De Los Rios, & E. Pestelacci</i>	
2. How Scale-free Type-based Networks Emerge from Instance-based Dynamics	8
<i>Tom Lenaerts, Hugues Bersini, & Francisco C. Santos</i>	
3. Evolving Biological Clocks using Genetic Regulatory Networks	15
<i>Johannes F. Knabe, Chrystopher L. Nehaniv, Maria J. Schilstra, & Tom Quick</i>	
4. Evolution of Repressilators Using a Biologically-motivated Model of Gene Expression.....	22
<i>Barry Drennan & Randall D. Beer</i>	
5. A Nonlinear Continuous Stochastic Model for Genetic Regulatory Networks: Caveats for Microarray Data Analysis	28
<i>Simon Rosenfeld</i>	
6. The Role of Redundancy in the Robustness of Random Boolean Networks.....	35
<i>Carlos Gershenson, Stuart A. Kauffman, & Ilya Shmuelevich</i>	

Development

7. An Endosymbiotic Model for Modular Acquisition in Stochastic Developmental Systems	42
<i>John Rieffel & Jordan Pollack</i>	
8. Modeling of Pattern Formation in Cell Cultures	49
<i>Scott Christley, Stuart A. Newman, & Mark S. Alber</i>	
9. Investigating Ontogenetic Space with Developmental Cell Lineages.....	56
<i>Nicholas Geard & Janet Wiles</i>	
10. Heterochrony and Evolvability in Neural Network Development	63
<i>Artur Matos, Reiji Suzuki, & Takaya Arita</i>	
11. Towards Shape and Structure Optimization with Evolutionary Development....	70
<i>Till Steiner, Markus Olhofer, & Bernhard Sendhoff</i>	
12. Wriggraph: A Kinetic Graph Model That Uniformly Describes Ontogeny and Motility of Artificial Creatures.....	77
<i>Koji Sano & Hiroki Sayama</i>	
13. A Morphogenesis Model for Multiagent Embryogeny	84
<i>Gregory Beurier, Fabien Michel, & Jacques Ferber</i>	

Evolution

14. **Connecting Genotype with Phenotype using the Genome Template Model: Pleiotropy, Polygenic Traits, and Life-History Strategies** 91
R. E. DeSimone, A. Boondirek, & T. J. Newman
15. **Modeling Recombination's Role in the Evolution of HIV Drug Resistance** 98
Richard K. Belew & Max W. Chang
16. **An Evolutionary Model of Genotype Editing** 105
Luis M. Rocha, Ana Maguitman, Chien-feng Huang, Jasleen Kaur, & Sheetal Narayanan
17. **A Structure of the Foothills of the Fitness Landscape in Protein Sequence Space** 112
Yuuki Hayashi, Takuyo Aita, Hitoshi Toyota, Yuzuru Husimi, Itaru Urabe, & Tetsuya Yomo
18. **The Role of Space in the Success of Coevolutionary Learning** 118
Melanie Mitchell, Michael D. Thomure, & Nathan L. Williams
19. **Phat Phenotypes for Agents in Niche Construction** 125
George Kampis & Laszlo Gulyas
20. **Three Characteristics of Developmental, Self-repairable Cellular Systems to Improve Their Evolvability** 132
Mathieu S. Capcarrere & Can Öztürkeri
21. **Experimental Studies on Interaction among Correlated Traits** 139
Haitao Zhang & Michael Travisano

Prebiotic Evolution and Artificial Chemistries

22. **Quasi-Species and Aggregate Dynamics** 145
Anders Eriksson, Olof Görnerup, Martin Nilsson Jacobi, & Steen Rasmussen
23. **Simulation Model of Prebiotic Evolution of Genetic Coding** 152
Sidney Markowitz, Alexei Drummond, Kay Nieselt, & Peter R. Wills
24. **The Role of Programmed Death in the Persistence of Life** 158
Gordon C. Osbourn, Christina E. Warrender, & Ann M. Bouchard
25. **Complexity Scaling of a Minimal Functional Chemistry** 165
Chris Salzberg
26. **An Approach to Constructing Qualitative Models in Computational Cell Biology Using an Artificial Chemistry Based on Pattern Matching and Recombination** 172
Kazuto Tominaga, Keiji Kobayashi, Tooru Watanabe, Kazumasa Koizumi, & Koji Kishi

Embodiment and Behavior

27. **Self-Organization of Communication in Evolving Robots** 178
Davide Marocco & Stefano Nolfi

28. Measuring Spatiotemporal Coordination in a Modular Robotic System	185
<i>Mikhail Prokopenko, Vadim Gerasimov, & Ivan Tanev</i>	
29. Let it Roll—Emerging Sensorimotor Coordination in a Spherical Robot	192
<i>Ralf Der, Georg Martius, & Frank Hesse</i>	
30. Synchronization within Homogeneous Neural Modules Controlling a Simulated Hexapod Robot.....	199
<i>Mariagiovanna Mazzapioda & Stefano Nolfi</i>	
31. Incorporating Energy Expenditure into Evolutionary Robotics Fitness Measure.....	206
<i>Gary McHale & Phil Husbands</i>	
32. TOPOS: Generalized Braitenberg Vehicles that Recognize Complex Real Sounds as Landmarks.....	213
<i>Pablo González-Nalda & Blanca Cases</i>	
33. Automated Synthesis of Body Schema using Multiple Sensor Modalities.....	220
<i>Josh Bongard, Victor Zykov, & Hod Lipson</i>	
34. Spontaneous Emergence of Self-Replicating Structures in Molecube Automata	227
<i>Gregory Studer & Hod Lipson</i>	
35. Developing a Reaching Behaviour in an Simulated Anthropomorphic Robotic Arm Through an Evolutionary Technique	234
<i>Gianluca Massera, Angelo Cangelosi, & Stefano Nolfi</i>	
36. Towards Evolvable Hovering Flight on a Physical Ornithopter.....	241
<i>Will Regan, Floris van Breugel, & Hod Lipson</i>	
37. Evolving an Integrated Phototaxis and Hole-avoidance Behavior for a Swarm-bot	248
<i>Anders Lyhne Christensen & Marco Dorigo</i>	
38. An Improved System for Artificial Creatures Evolution.....	255
<i>Thomas Miconi & Alastair Channon</i>	
39. Evolution of Virtual Catapults	262
<i>Nicolas Chaumont, Richard Egli, & Christoph Adami</i>	
40. The Evolution of Structural Organization in Digital Organisms	268
<i>Matthew Rupp, Eric Torng, & Charles Ofria</i>	

Biologically-inspired Computing and Technology

41. Role of Inhibitions in Neural Networks for the Orientation Behaviour of Sand Scorpions.....	275
<i>DaeEun Kim</i>	
42. Passive Sensing and Active Sensing of a Biomimetic Whisker	282
<i>DaeEun Kim & Ralf Möller</i>	
43. A Cytoskeletal-Based Robotic Controller	289
<i>Jeffrey O. Pfaffmann, Monica Brockmeyer, & Silvano Colombano</i>	

44. **Alternate Recruitment Strategies for SDS** 296
Darren R. Myatt, Mark Bishop, & Slawomir J. Nasuto
45. **DNA as a Medium for Storing Digital Signals** 303
Sotirios A. Tsaftaris, Vassily Hatzimanikatis, & Aggelos K. Katsaggelos
46. **Noise-Mediated Intermittent Synchronization of Collective Behaviors in the Probabilistic Cellular Automata Model of Neural Populations** 310
Marko Puljic & Robert Kozma

Information and Complexity

47. **Measuring Informational Distances Between Sensors and Sensor Integration** 316
Lars Olsson, Chrystopher L. Nehaniv, & Daniel Polani
48. **Evolving Coordinated Behavior by Maximizing Information Structure**..... 323
Olaf Sporns & Max Lungarella
49. **Evolution of Neural Structure and Complexity in a Computational Ecology** 330
Larry S. Yaeger & Olaf Sporns
50. **Relevant Information in Optimized Persistence vs. Progeny Strategies** 337
Daniel Polani, Chrystopher L. Nehaniv, Thomas Martinetz, & Jan T. Kim
51. **A Simple Modularity Measure for Search Spaces Based on Information Theory** 344
Peter Dauscher, Daniel Polani, & Richard A. Watson
52. **Sensorimotor Information Flow in Genetic Regulatory Network Driven Control Systems** 351
Tom Quick, Chrystopher Nehaniv, Kerstin Dautenhahn, & Graham Roberts

Collective Behavior and Population Dynamics

53. **Influence of the Level of Polyandry and Genetic Architecture on Division of Labour**..... 358
Danesh Tarapore, Dario Floreano, & Laurent Keller
54. **On Prey Grouping and Predator Confusion in Artificial Fish Schools** 365
Hanspeter Kunz, Thomas Züblin, & Charlotte K. Hemelrijk
55. **Ideal Free Distribution in Agents with Evolved Neural Architectures** 372
Virgil Griffith & Larry S. Yaeger
56. **EPICURE: An Agent-Based Foraging Model**..... 379
Michael E. Roberts & Robert L. Goldstone
57. **A Particle Swarm Selects for Evolution of Gliders in Non-Uniform 2D Cellular Automata** 386
J.J. Ventrella
58. **On Self-Regulated Swarms, Societal Memory, Speed and Dynamics** 393
Vitorino Ramos, Carlos Fernandes, & Agostinho C. Rosa

59. **Representing Classical Structures in Cellular Automata** 400
Peter R. Wills
60. **Asymmetry between Even and Odd Levels of Recursion in a Theory of Mind** 405
Masanori Takano & Takaya Arita
61. **SWAGES—An Extendable Distributed Experimentation System for Large-Scale Agent-Based Alife Simulations** 412
M. Scheutz, P. Schermerhorn, R. Connaughton, & A. Dingler
62. **Real-time Evolving Swarms for Rapid Pattern Detection and Tracking**..... 419
Christopher Middendorff & Matthias Scheutz
63. **Pushing Up The Daisies**..... 426
J. G. Dyke & I. R. Harvey

Evolutionary and Collective Games

64. **Emergence of Cooperation in Heterogeneous Structured Populations** 432
F. C. Santos, J. M. Pacheco, & Tom Lenaerts
65. **A Minimal Information Prisoner's Dilemma on Evolving Networks**..... 438
L. Luthi, M. Giacobini, & M. Tomassini
66. **Game-Theoretic Robustness in Cooperation and Prejudice Reduction: A Graphic Measure** 445
Patrick Grim, Randy Au, Nancy Louie, Robert Rosenberger, William Braynen, Evan Selinger, & Robb E. Eason
67. **How Spatial Locality Can Affect the Evolution of Niche Construction**..... 452
Reiji Suzuki & Takaya Arita
68. **Cross-level Interactions Between Conflict Resolution and Survival Games** 459
Matthias Scheutz

Language and Learning

69. **A Cross-situational Learning Algorithm for Damping Homonymy in the Guessing Game**..... 466
Joachim De Beule, Bart De Vylder, & Tony Belpaeme
70. **Collectivism and the Emergence of Linguistic Universals** 473
Georg Theiner
71. **Strategies for Fast Convergence in Semiotic Dynamics** 480
Andrea Baronchelli, Luca Dall'Asta, Alain Barrat, & Vittorio Loreto
72. **Generalization in Languages Evolved for Mobile Robots**..... 486
Ruth Schulz, Paul Stockwell, Mark Wakabayashi, & Janet Wiles
73. **On Crossing Fitness Valleys with the Baldwin Effect** 493
Rob Mills & Richard A. Watson
74. **On the Influence of Lifetime Learning on Selection Pressure** 500
Ingo Paenke, Tadeusz Kawecki, & Bernard Sendhoff

75. Learning on a Continuum in Evolved Dynamical Node Networks	507
<i>Eduardo Izquierdo-Torres & Inman Harvey</i>	

Philosophy and Formal Models

76. ALife Models as Epistemic Artefacts.....	513
<i>Xabier Barandiaran & Alvaro Moreno</i>	
77. Computational Modelling, Explicit Mathematical Treatments, and Scientific Explanation.....	520
<i>John Bryden & Jason Noble</i>	
78. Representations: The Hard Problem for Artificial Life	527
<i>Harry Halpin</i>	
79. Is Adaptiveness a Coherent Idea?	534
<i>Simon McGregor</i>	
80. The Fallacy of General Purpose Bio-inspired Computing	540
<i>Seth Bullock</i>	
81. Formalising Agency-Inducing Patterns in World Dynamics	546
<i>Tibor Bosse & Jan Treur</i>	
82. Inductive Formalization of Self Reproduction in Dynamical Hierarchies	553
<i>Janardan Mishra</i>
