

CONTENTS

Part I

IDENTIFICATION OF GENETIC MATERIAL

1. History of the Problem 3
2. Cellular Division and Chromosomes 9
3. Reproductive Cycles 30
4. Nucleic Acids 48
5. Replication and Synthesis of Nucleic Acids 72

Part II

TRANSMISSION AND DISTRIBUTION OF GENETIC MATERIAL

6. Mendelian Principles: I. Segregation 97
7. Mendelian Principles: II. Independent Assortment 109
8. Probability and Statistical Testing 126
9. Dominance Relations and Multiple Alleles 153
10. Environmental Effects and Gene Expression 172
11. Gene Interaction and Lethality 190
12. Sex Determination and Sex Linkage in Diploids 214
13. Maternal Effects and Cytoplasmic Heredity 240
14. Quantitative Inheritance 260
15. Analysis of Quantitative Characters 279

Part III

ARRANGEMENT OF GENETIC MATERIAL

16. Linkage and Recombination 305
17. Gene Mapping in Diploids 328
18. Recombination in Fungi 360
19. Recombination in Bacteria 385
20. Recombination in Viruses 420

Part IV

CHANGE AND STRUCTURE OF GENETIC MATERIAL

- 21. Chromosome Variation in Number 449
- 22. Changes in Chromosome Structure 479
- 23. Gene Mutation 515
- 24. Induced Genetic Changes 536
- 25. Genetic Fine Structure 565

Part V

FUNCTION OF GENETIC MATERIAL

- 26. Genetic Control of Proteins 585
- 27. Transfer and Regulation of Genetic Information 620
- 28. Nature of the Genetic Code 648
- 29. Differentiation and Pattern 666

Part VI

COURSE OF GENETIC MATERIAL IN POPULATIONS

- 30. Gene Frequencies and Equilibrium 693
- 31. Changes in Gene Frequencies 717
- 32. Inbreeding and Heterosis 744
- 33. Genetic Structure of Populations 767
- 34. Speciation and Evolution 792
- 35. Prospects for the Control of Human Evolution 815
