## **Chapter 1 Classification and Some Concepts in Chromatography**

|         |                                                          |    |
|---------|----------------------------------------------------------|----|
| 1.1     | Classification of Chromatographic Methods                | 3  |
| 1.1.1   | Classification According to the Fractionation Principle  | 3  |
| 1.1.1.1 | Gel Filtration                                           | 3  |
| 1.1.1.2 | Partition Chromatography                                 | 4  |
| 1.1.1.3 | Adsorption Chromatography                                | 5  |
| 1.1.1.4 | Ion Exchange Chromatography                              | 5  |
| 1.1.1.5 | Affinity Chromatography                                  | 6  |
| 1.1.2   | Classification According to Elution Mode                 | 7  |
| 1.1.2.1 | Frontal Analysis                                         | 7  |
| 1.1.2.2 | Displacement Chromatography                              | 7  |
| 1.1.2.3 | Chromatographic Elution                                  | 8  |
| 1.1.3   | Classification According to Position of Stationary Phase | 8  |
| 1.2     | Some Theory of Chromatographic Elution                   | 9  |
| 1.2.1   | Chromatographic Process                                  | 9  |
| 1.2.2   | Chromatographic Band (Zone)                              | 10 |
| 1.2.2.1 | Migration to the Chromatographic Band                    | 13 |
| 1.2.2.2 | Gauss Distribution                                       | 17 |
| 1.2.2.3 | The Equation of the Band Migration                       | 19 |
| 1.2.3   | The Concept of Theoretical Plates                        | 24 |
| 1.2.4   | Resolution of Adjacent Chromatographic Bands             | 26 |
| 1.2.5   | Optimization of Separation                               | 28 |
| 1.2.5.1 | The Column Dimensions                                    | 28 |
| 1.2.5.2 | Particle Size of Column Packing                          | 29 |
| 1.2.5.3 | Column-Packing Methods                                   | 30 |
| 1.2.5.4 | Flow Rate                                                | 30 |
| 1.2.5.5 | Physical Properties of the Eluent                        | 31 |
| 1.2.5.6 | The Column Loading                                       | 31 |
| 1.2.6   | Gradient Elution                                         | 32 |
| 1.2.7   | Chromatography of Macromolecules                         | 36 |

## **Chapter 2 Materials of Matrices of Sorbents and Ion Exchangers**

|       |                         |    |
|-------|-------------------------|----|
| 2.1   | Cellulose               | 38 |
| 2.1.1 | Microgranular Cellulose | 40 |
| 2.1.2 | Fibrous Cellulose       | 40 |

|        |                                                   |    |
|--------|---------------------------------------------------|----|
| 2.2    | Dextran-Based Gels (Sephadexes) . . . . .         | 41 |
| 2.3    | Agarose . . . . .                                 | 42 |
| 2.4    | Polyacrylamide Gel (PAAG) . . . . .               | 44 |
| 2.4.1  | Trisacryl . . . . .                               | 44 |
| 2.4.2  | Sephacryl . . . . .                               | 45 |
| 2.4.3  | Ultrogels Aca . . . . .                           | 45 |
| 2.5    | Polystyrene Resins . . . . .                      | 46 |
| 2.6    | Polyamide Resins . . . . .                        | 47 |
| 2.7    | Kieselguhr (Celite, Diatomaceous Earth) . . . . . | 47 |
| 2.8    | Silica Gel . . . . .                              | 47 |
| 2.9    | Alumina . . . . .                                 | 50 |
| 2.10   | Porous Glass . . . . .                            | 52 |
| 2.11   | Hydroxylapatite . . . . .                         | 52 |
| 2.12   | Toyo Soda Sorbents . . . . .                      | 53 |
| 2.12.1 | Sorbents for Ordinary Chromatography . . . . .    | 53 |
| 2.12.2 | Sorbents for HPLC . . . . .                       | 54 |

### **Chapter 3 Equipment for Column Chromatography**

|         |                                                |    |
|---------|------------------------------------------------|----|
| 3.1     | Low-Pressure Chromatography . . . . .          | 55 |
| 3.1.1   | Chromatographic Columns . . . . .              | 56 |
| 3.1.1.1 | Self-Made Columns . . . . .                    | 56 |
| 3.1.1.2 | Commercial Columns . . . . .                   | 57 |
| 3.1.1.3 | Column-Packing Technique . . . . .             | 59 |
| 3.1.2   | Eluent Reservoirs, Gradient Mixers . . . . .   | 62 |
| 3.1.2.1 | Isocratic Elution . . . . .                    | 62 |
| 3.1.2.2 | Gradient Elution . . . . .                     | 63 |
| 3.1.3   | Sample Application . . . . .                   | 66 |
| 3.1.4   | Peristaltic Pumps . . . . .                    | 68 |
| 3.1.5   | Detectors . . . . .                            | 70 |
| 3.1.5.1 | UV-Detectors . . . . .                         | 71 |
| 3.1.5.2 | Fluorimeters . . . . .                         | 74 |
| 3.1.5.3 | pH Monitor . . . . .                           | 75 |
| 3.1.6   | Fraction Collectors . . . . .                  | 75 |
| 3.1.7   | Accessories . . . . .                          | 79 |
| 3.2     | High-Pressure Chromatography . . . . .         | 80 |
| 3.2.1   | Columns . . . . .                              | 81 |
| 3.2.2   | Sample Application . . . . .                   | 82 |
| 3.2.3   | Pumps . . . . .                                | 84 |
| 3.2.4   | Preselection of the Elution Gradient . . . . . | 87 |
| 3.2.5   | Detectors . . . . .                            | 87 |
| 3.2.6   | Automation . . . . .                           | 88 |
| 3.3     | Moderate-Pressure Chromatography . . . . .     | 90 |

### **Chapter 4 Gel Filtration**

|       |                              |    |
|-------|------------------------------|----|
| 4.1   | General Principles . . . . . | 95 |
| 4.1.1 | Basic Concept . . . . .      | 95 |

|         |                                                                         |     |
|---------|-------------------------------------------------------------------------|-----|
| 4.1.2   | Distribution Coefficients . . . . .                                     | 96  |
| 4.1.3   | Selectivity Curves . . . . .                                            | 98  |
| 4.1.4   | Separation Efficiency . . . . .                                         | 98  |
| 4.2     | Characteristics of the Commercial Matrices . . . . .                    | 100 |
| 4.2.1   | Matrices for Gel Filtration at Low Pressure . . . . .                   | 100 |
| 4.2.1.1 | The Products of Pharmacia . . . . .                                     | 100 |
| 4.2.1.2 | The Products of the Bio-Rad Company . . . . .                           | 105 |
| 4.2.1.3 | The Products of the LKB Company . . . . .                               | 108 |
| 4.2.1.4 | The Products of Merck and Serva . . . . .                               | 109 |
| 4.2.2   | Packings for Gel Filtration at High Pressure . . . . .                  | 109 |
| 4.3     | The Practical Features of Gel Filtration at Low Pressure . . . . .      | 113 |
| 4.3.1   | Preparation of the Matrix . . . . .                                     | 113 |
| 4.3.2   | Packing a Column . . . . .                                              | 114 |
| 4.3.3   | Checking the Column Packing. Determination of $V_0$ . . . . .           | 117 |
| 4.3.4   | Sample Application . . . . .                                            | 118 |
| 4.3.5   | Maintaining the Operating Conditions . . . . .                          | 119 |
| 4.3.6   | Regeneration of a Column . . . . .                                      | 120 |
| 4.4     | Choice of Operation Parameters . . . . .                                | 120 |
| 4.4.1   | Choice of Gel Type . . . . .                                            | 120 |
| 4.4.2   | Choice of a Column Dimension . . . . .                                  | 121 |
| 4.4.3   | Choice of an Eluent . . . . .                                           | 122 |
| 4.4.4   | Flow Rate . . . . .                                                     | 122 |
| 4.4.5   | Optimization of the Experiment . . . . .                                | 123 |
| 4.5     | Purification and Fractionation of Macromolecules . . . . .              | 124 |
| 4.5.1   | Proteins and Peptides . . . . .                                         | 124 |
| 4.5.1.1 | Desalting, Buffer Exchange, Removal of Labelled<br>Precursors . . . . . | 124 |
| 4.5.1.2 | Chromatographic Fractionation . . . . .                                 | 126 |
| 4.5.2   | Protein-Nucleic Acid Complexes . . . . .                                | 127 |
| 4.5.3   | Nucleic Acids . . . . .                                                 | 128 |
| 4.6     | Determination of the Protein Molecular Weight . . . . .                 | 130 |
| 4.6.1   | Native Proteins . . . . .                                               | 131 |
| 4.6.2   | Denatured Proteins . . . . .                                            | 136 |
| 4.7     | Gel Filtration at High Pressure . . . . .                               | 139 |
| 4.8     | Thin Layer Gel Filtration . . . . .                                     | 147 |

## **Chapter 5 Partition and Hydrophobic Chromatography**

|       |                                                                                |     |
|-------|--------------------------------------------------------------------------------|-----|
| 5.1   | Introductory Remarks . . . . .                                                 | 151 |
| 5.2   | Normal Phase Partition Chromatography . . . . .                                | 153 |
| 5.3   | Partition Reverse Phase Chromatography (PRPC) . . . . .                        | 154 |
| 5.3.1 | Separation of tRNAs in the "RPC-5" System . . . . .                            | 154 |
| 5.3.2 | Separation of DNA in the RPC-5 System . . . . .                                | 156 |
| 5.4   | Hydrophobic Interaction Chromatography at<br>Low Pressure . . . . .            | 159 |
| 5.4.1 | Nonmodified Sepharose. Elution with Decreasing<br>Salt Concentration . . . . . | 159 |

|         |                                                                                             |     |
|---------|---------------------------------------------------------------------------------------------|-----|
| 5.4.2   | Hydrophobized Agarose Gels . . . . .                                                        | 162 |
| 5.4.2.1 | Elution with Decreasing Salt Concentration . . . . .                                        | 163 |
| 5.4.2.2 | Elution with Increasing Salt Concentration . . . . .                                        | 164 |
| 5.4.2.3 | The Use of Chaotropic Li <sup>+</sup> -Ions . . . . .                                       | 164 |
| 5.4.2.4 | The Use of Detergents . . . . .                                                             | 165 |
| 5.4.2.5 | The Use of Ethylene Glycol . . . . .                                                        | 168 |
| 5.5     | Reverse-Phase High-Pressure Liquid Chromatography<br>(RP-HPLC) . . . . .                    | 169 |
| 5.5.1   | Introductory Remarks . . . . .                                                              | 169 |
| 5.5.2   | Prechromatographic Operations . . . . .                                                     | 172 |
| 5.5.2.1 | Commercial Sorbents and Columns for RP-HPLC . . . . .                                       | 172 |
| 5.5.2.2 | Choice of Matrix and Eluent . . . . .                                                       | 172 |
| 5.5.2.3 | Sample Preparation . . . . .                                                                | 173 |
| 5.5.2.4 | Eluent Operation . . . . .                                                                  | 173 |
| 5.5.2.5 | Column Maintenance . . . . .                                                                | 174 |
| 5.5.3   | Fractionation of Amino Acids . . . . .                                                      | 174 |
| 5.5.4   | Identification of PTH-Derivatives of Amino Acids . . . . .                                  | 177 |
| 5.5.5   | Separation of Peptides in Gradients of Acetonitrile<br>and Alcohols . . . . .               | 181 |
| 5.5.6   | Ion-Pair Chromatography of Peptides . . . . .                                               | 182 |
| 5.5.7   | Separation of Nucleosides and Nucleotides . . . . .                                         | 187 |
| 5.5.8   | Fractionation and Purification of Proteins . . . . .                                        | 189 |
| 5.5.9   | Fractionation of Proteins and Peptides at<br>Moderate Pressure in the FPLC System . . . . . | 196 |
| 5.5.10  | Fractionation of Nucleic Acids . . . . .                                                    | 197 |

### **Chapter 7 Ion Exchange Chromatography**

|         |                                                                                                |     |
|---------|------------------------------------------------------------------------------------------------|-----|
| 7.1     | Introduction . . . . .                                                                         | 226 |
| 7.2     | Components of the Chromatographic System . . . . .                                             | 227 |
| 7.2.1   | Ion Exchangers . . . . .                                                                       | 227 |
| 7.2.1.1 | The Support Materials . . . . .                                                                | 227 |
| 7.2.1.2 | Ionogenic Groups . . . . .                                                                     | 228 |
| 7.2.1.3 | Counterions . . . . .                                                                          | 230 |
| 7.2.1.4 | The Capacity of the Ion Exchanger . . . . .                                                    | 231 |
| 7.2.2   | The Eluent . . . . .                                                                           | 232 |
| 7.2.3   | The Chromatographed Substances . . . . .                                                       | 232 |
| 7.3     | Chromatographic Process . . . . .                                                              | 233 |
| 7.3.1   | The Ionic Interactions of the Solute and Packing . . . . .                                     | 233 |
| 7.3.2   | Control of Ionic Interaction . . . . .                                                         | 237 |
| 7.3.2.1 | Choice of Buffer pH . . . . .                                                                  | 237 |
| 7.3.2.2 | Choice of Salt Concentration . . . . .                                                         | 240 |
| 7.3.3   | Nonionic Interactions of the Solute and Support . . . . .                                      | 242 |
| 7.3.4   | The Admixtures of Heavy Metal Ions . . . . .                                                   | 242 |
| 7.4     | Characteristics of Commercial Ion Exchangers . . . . .                                         | 242 |
| 7.4.1   | Ion Exchangers on the Basis of Polystyrene (Resins) . . . . .                                  | 243 |
| 7.4.2   | Ion Exchange Resins on the Basis of Polyacrylate and Polymethacrylate . . . . .                | 244 |
| 7.4.3   | Ion Exchange Celluloses . . . . .                                                              | 245 |
| 7.4.4   | Sephadex Ion Exchangers . . . . .                                                              | 247 |
| 7.4.5   | Ion Exchangers on the Basis of Agarose . . . . .                                               | 249 |
| 7.4.6   | Ion Exchangers for HPLC . . . . .                                                              | 250 |
| 7.4.7   | Pharmacia Ion Exchangers for Moderate Pressure Chromatography of Proteins . . . . .            | 251 |
| 7.5     | Preparation of the Ion Exchangers for Packing a Column . . . . .                               | 252 |
| 7.5.1   | Precycling and Washing . . . . .                                                               | 252 |
| 7.5.2   | Conversion into the Required Ionic Form . . . . .                                              | 253 |
| 7.5.3   | Danger of CO <sub>2</sub> Consumption . . . . .                                                | 254 |
| 7.5.4   | Additional Notes . . . . .                                                                     | 254 |
| 7.6     | Separations by Static Ion Exchange Chromatography . . . . .                                    | 255 |
| 7.6.1   | Neutralization of Alkali or Acid Without Salt Formation . . . . .                              | 255 |
| 7.6.2   | The Substitution of Ions . . . . .                                                             | 256 |
| 7.6.3   | Desalting of Solutions . . . . .                                                               | 256 |
| 7.6.4   | Removal of Some Organic Admixtures . . . . .                                                   | 257 |
| 7.6.5   | Concentration of the Samples . . . . .                                                         | 257 |
| 7.6.6   | Separation of the Sample Components Quite Different in Affinity to the Ion Exchanger . . . . . | 258 |
| 7.7     | Choice of Conditions for Dynamic Ion Exchange Chromatography . . . . .                         | 259 |
| 7.7.1   | Choice of Ion Exchanger Matrix . . . . .                                                       | 259 |

|        |                                                                                 |     |
|--------|---------------------------------------------------------------------------------|-----|
| 7.7.2  | Choice of Elution Conditions . . . . .                                          | 262 |
| 7.7.3  | Choice of Buffer pH for Elution . . . . .                                       | 262 |
| 7.7.4  | Choice of Salt Concentration . . . . .                                          | 264 |
| 7.7.5  | Retention of the Sample Nativity . . . . .                                      | 264 |
| 7.7.6  | Choice of the Eluent Volume . . . . .                                           | 265 |
| 7.7.7  | Choice of the Column Dimensions . . . . .                                       | 266 |
| 7.7.8  | Choice of Flow Rate . . . . .                                                   | 266 |
