
Contents

Part I Introduction

1 Markov Models in Molecular Evolution

Nicolas Galtier, Olivier Gascuel, and Alain Jean-Marie 3

2 Introduction to Applications of the Likelihood Function in Molecular Evolution

Jutta Buschbom and Arndt von Haeseler 25

3 Introduction to Markov Chain Monte Carlo Methods in Molecular Evolution

Bret Larget 45

4 Population Genetics of Molecular Evolution

Carlos D. Bustamante 63

Part II Practical Approaches for Data Analysis

5 Maximum Likelihood Methods for Detecting Adaptive Protein Evolution

Joseph P. Bielawski and Ziheng Yang 103

6 HyPhy: Hypothesis Testing Using Phylogenies

Sergei L. Kosakovsky Pond and Spencer V. Muse 125

7 Bayesian Analysis of Molecular Evolution Using MrBayes

John P. Huelsenbeck and Fredrik Ronquist 183

8 Estimation of Divergence Times from Molecular Sequence Data

Jeffrey L. Thorne and Hirohisa Kishino 233

Part III Models of Molecular Evolution

9 Markov Models of Protein Sequence Evolution*Matthew W. Dimmic* 259**10 Models of Microsatellite Evolution***Peter Calabrese and Raazesh Sainudiin* 289**11 Genome Rearrangement***Rick Durrett* 307**12 Phylogenetic Hidden Markov Models***Adam Siepel and David Haussler* 325

Part IV Inferences on Molecular Evolution

13 The Evolutionary Causes and Consequences of Base Composition Variation*Gilean A. T. McVean* 355**14 Statistical Alignment: Recent Progress, New Applications, and Challenges***Gerton Lunter, Alexei J. Drummond, István Miklós, and Jotun Hein* ... 375**15 Estimating Substitution Matrices***Von Bing Yap and Terry Speed* 407**16 Posterior Mapping and Posterior Predictive Distributions***Jonathan P. Bollback* 439**17 Assessing the Uncertainty in Phylogenetic Inference***Hidetoshi Shimodaira and Masami Hasegawa* 463**Index** 495
