

CONTENTS

Preface	ix
---------------	----

Section I: Artificial Nucleic Acid Switches and Sensors

1. Allosteric Ribozymes as Molecular Switches and Sensors	3
<i>Garrett A. Soukup</i>	
Introduction	3
Genesis of Allosteric Ribozymes	5
Allosteric Ribozymes as Molecular Sensors	14
Allosteric Ribozymes as Genetic Regulatory Switches	18
Perspective	20
2. Ribozymes and Deoxyribozymes Switched by Oligonucleotides	25
<i>Dipankar Sen and Edward K.Y. Leung</i>	
Introduction	25
Disruptive Inhibition of Natural Ribozymes	
Using Antisense Oligonucleotides	26
Destabilized Ribozymes and Maxizymes	26
Of TRAPs and Related Strategies	27
Interference with Substrate Binding: Expansive Regulation	
and Deoxyribozyme Logic Gates	29
Defective Ribozymes and "Half"-Ribozymes	30
Unique Systems	33
Perspective	33
3. Ribozymes Switched by Proteins	37
<i>Tan Inoue and Yoshiya Ikawa</i>	
Introduction	37
From a Self-Splicing Group I Intron RNA	
to a Self-Splicing RNP	40
Design of Protein-Dependent Allosteric	
Hammerhead Ribozymes	42
Selection of Protein-Activated Artificial Ribozymes	42
Applications of Protein-Switched Ribozymes	44
Perspective	45
4. Fluorescence-Signaling Nucleic Acid-Based Sensors	49
<i>Razvan Nutiu, Lieven P. Billen and Yingfu Li</i>	
Introduction	49
Molecular Beacons for Nucleic Acid Detection	51
Signaling Aptamers	55
Signaling Ribozymes and Deoxyribozymes	60
Perspective	68

Section II: Natural Nucleic Acid Switches and Sensors

5. Protein-Induced RNA Switches in Nature	75
<i>Oliver Mayer, Nikolai Windbichler, Herbert Wank and Renée Schroeder</i>	
Introduction	75
Proteins That Bind RNA with High Affinity and Stabilize Specific Structures	76
RNA Helicases	77
NPH-II	79
CYT-19	79
Hfq, A Protein That Assists RNA Molecules to Anneal	79
Proteins with RNA Chaperone Activity	82
<i>E. coli</i> Protein StpA	82
Nucleocapsid Protein of HIV-1	83
Proteins That Assist with the Formation of RNA-Protein Complexes	84
Perspective	85
6. Riboswitches as Genetic Control Elements	89
<i>Ali Nahvi and Ronald R. Breaker</i>	
Introduction	89
Why RNA Can Serve as a Metabolite-Sensing Genetic Switch	90
Identifying the First Riboswitches	91
Dissecting Riboswitches into Functional Components	92
Simple Riboswitches	93
A Ribozyme Riboswitch	97
A Cooperative Riboswitch	99
Finding New Riboswitches	101
Are Riboswitches Ancient?	103
Perspective	103
7. Switchable RNA Motifs as Drug Targets	107
<i>Eric Westhof, Boris François and Quentin Vicens</i>	
Introduction	107
Constraints of RNA Folding on the Choice of RNA Target	108
Which RNA Dynamics Should Be Targeted?	109
Mechanisms of Action of Aminoglycosides	110
Mode of Binding of Aminoglycosides to the A Site: Stabilization of One Conformational State	112
The Decoding Process by the Two Bulging Adenines of the A Site	114
The Importance of Targeting a Molecular Switch	116
Perspective	117
Index	123
