

CONTENTS

Preface	ix
1. Exocytosis: Lessons from SNARE Mutants and Friends	1
<i>Emmanuel Sotirakis and Thierry Galli</i>	
SNARE Proteins: An Historical Perspective	1
Exocytic SNARE Mutants	2
Exocytic SNARE Partners: Pathways for Regulation	3
SNARE and Friends: Is That All about Fusion?	6
2. Regulation of SNARE Complex Assembly by Second Messengers: Roles of Phospholipases, Munc13 and Munc18	10
<i>Alexander J.A. Groffen and Matthijs Verhage</i>	
Modulation of Regulated Exocytosis	10
The Activation of Phospholipases	12
How Central Signaling Molecules Modulate Exocytosis	15
Role of Munc13 in Regulated Exocytosis	17
Role of Munc18 in Regulated Exocytosis	19
3. Rab GTPases and Their Role in the Control of Exocytosis	28
<i>Romano Regazzi</i>	
Rab Properties and Functions	28
Rab Subfamilies	30
The Rab3 Subfamily	31
The Rab27 Subfamily	31
Rab Effectors	32
Rabphilin-3A	32
NOC2	33
The RIM Family	33
Synaptotagmin-Like Proteins (Slps)	34
Proteins Related to Slps	35
Calmodulin	35
Synapsin I	37
Munc13-4	37
4. The Role of Synaptotagmin and Synaptotagmin-Like Protein (Slp) in Regulated Exocytosis	42
<i>Mitsunori Fukuda</i>	
Role of the Synaptotagmin Family Members in Regulated Exocytosis	43
Role of Slp Family Members in Rab27-Dependent Membrane Trafficking	49
Role of Rabphilin in Rab27-Dependent Membrane Trafficking	56
5. The Synapsins and the Control of Neuroexocytosis	62
<i>Pietro Baldelli, Anna Fassio, Anna Corradi, Flavia Valtorta and Fabio Benfenati</i>	
The Synapsins and the Reserve Pool of Synaptic Vesicles	64

The Synapsins and Short-Term Synaptic Plasticity	69
The Synapsins and Release Probability and Kinetics	70
The Synapsins, Long-Term Plasticity and Learning	71
6. Phospholipase D: A Multi-Regulated Lipid-Modifying Enzyme Involved in the Late Stages of Exocytosis	75
<i>Marie-France Bader and Nicolas Vitale</i>	
Molecular Tools to Probe the Cellular Functions of PLD Enzymes	76
Phospholipase D1 Localizes to Granule Docking Sites in Neuroendocrine Chromaffin and PC12 Cells and Plays a Role in Exocytosis	76
Regulation of PLD1 Activity in the Course of Exocytosis	79
ARF and PLD1 in Neurotransmitter Release	80
7. Lipid Rafts as Regulators of SNARE Activity and Exocytosis	84
<i>Christine Salatiel and Luke H. Chamberlain</i>	
Lipid Rafts, Caveolae and Detergent-Resistant Membranes	87
SNAREs and Rafts	89
SNARE Targeting to Raft Domains	89
Compartmentalisation of SNARE Effectors	91
Rafts and Exocytosis	91
Possible Roles for Lipid Rafts in Exocytosis	93
8. Mast Cells as a Model of Nonneuroendocrine Exocytosis	100
<i>Cristiana Brochetta and Ulrich Blank</i>	
Morphological Characteristics of MC Granules	101
Particular Features of MC Exocytosis	101
The Basic Secretory Machinery in MCs	103
Signal Transduction for Exocytosis in MCs	105
9. Acrosomal Exocytosis	117
<i>Claudia Nora Tomes</i>	
Why Is This Chapter in the Book? Or the Sperm Acrosome Reaction as a Model for Regulated Exocytosis	117
The Spermatozoon	117
The Acrosome	119
The Acrosome Reaction	119
10. Nonsecretory, Regulated Exocytosis: A Multifarious Mechanism Employed by Cells to Carry Out a Variety of Functions	148
<i>Emanuele Cocucci and Jacopo Meldolesi</i>	
Synaptic Transmission	150
Axonal Growth and Wound Healing	151
Neurosecretory Cells	153
Adipocytes, Kidney Duct Cells and Gastric Parietal Cells	153
Macrophages and Dendritic Cells	154
Exocytosis of Endosomes	155

11. Adaptation of the Secretory Machinery to Pathophysiological Conditions	161
<i>Abderrahmani Amar</i>	
Evidences for Adaptation of the Secretory Machinery to Physiopathologic Conditions: The Pancreatic β -Cell Model	161
Transcriptional Effects of the cAMP Signalling Pathways: Role of the Inducible cAMP Early Repressor (ICER)	165
Induction of ICER in other Secretory Cells in Response to Stress: Potential Implication for the Secretory Machinery	166
Index	175
