

Contents

1. Introduction and General Overview <i>Aharon Razin, Howard Cedar, and Arthur D. Riggs</i> ..	1
2. Type I and Type III Restriction-Modification Enzymes <i>Robert Yuan and Daniel L. Hamilton</i>	11
3. Methylases of the Type II Restriction-Modification Systems <i>Hamilton O. Smith and Samuel V. Kelly</i>	39
4. The Restriction and Modification DNA Methylases: An Overview <i>Robert Yuan and Hamilton O. Smith</i>	73
5. Methylation of Prokaryotic DNA <i>M. G. Marinus</i>	81
6. DNA Methylation: DNA Replication and Repair <i>Robert H. Grafstrom, Daniel L. Hamilton, and Robert Yuan</i>	111
7. DNA Methylation Patterns: Formation and Biological Functions <i>Aharon Razin</i>	127

8. DNA Methylation and Gene Expression <i>Howard Cedar</i>	147
9. Gene Activation by 5-Azacytidine <i>Peter A. Jones</i>	165
10. DNA Methylation in Early Mammalian Development <i>Detlev Jähner and Rudolf Jaenisch</i>	189
11. Specific Promoter Methylations Cause Gene Inactivation <i>Walter Doerfler, Klaus-Dieter Langner, Inge Kruczek, Lily Vardimon, and Doris Renz</i>	221
12. DNA Methylation and Developmental Regulation of Eukaryotic Globin Gene Transcription <i>Che-Kun James Shen</i>	249
13. X Inactivation, DNA Methylation, and Differentiation Revisited <i>Arthur D. Riggs</i>	269
14. Left-handed Z-DNA and Methylation of d(CpG) Sequences <i>Alexander Rich</i>	279
15. Chromatin Structure and Gene Expression <i>Kathleen F. Conklin and Mark Groudine</i>	293
16. Gene Methylation Patterns and Expression <i>Joel Yisraeli and Moshe Szyf</i>	353
