PART ONE GENES AND GENE EXPRESSION

1 The origins of genetics and molecular biology	3
1.1 Mendel and the experimental approach to genetics	4
1.2 The birth of genetics – Mendel rediscovered	5
1.3 Genes, chromosomes and fruit flies	6
1.4 What is life? – the advent of molecular biology	8
Reading	9
Problems	10
2 Genes are made of DNA	12
2.1 Chromosomes are made of protein and DNA	12
2.2 Experimental proof that DNA is the genetic material	13
2.2.1 The transforming principle	14
2.2.2 Bacteriophage genes are made of DNA	20
2.3 Acceptance of DNA as the genetic material	23
Reading	23
Problems	24
3 The structure of DNA	26
3.1 DNA is a polymer	26
3.1.1 Nucleotides – the monomers in DNA	26
3.1.2 Polynucleotides	29
3.1.3 RNA is also a polynucleotide	31
3.2 The double helix	32
3.2.1 Complementary base pairing is the fundamental fact of molecular genetics	39
3.2.2 The double helix exists in several different forms	40
Reading	41
Problems	41
4 Genes and biological information	44
4.1 Genes are segments of DNA	44
4.2 The organization of genes on DNA molecules	46

4.2.1 Genes may occur in clusters	46
4.2.2 Some genes have lost their function	49
4.2.3 Some genes are discontinuous	50
4.3 Gene expression	52
4.3.1 The Central Dogma	52
4.3.2 Transcription – the first stage of gene expression	52
4.3.3 Translation – the second stage of gene expression	53
4.3.4 Protein synthesis is the key to expression of biological information	53
Reading	54
Problems	55
5 Transcription	57
5.1 Eukaryotes and prokaryotes	57
5.2 Nucleotide sequences	59
5.3 RNA synthesis	60
5.3.1 RNA polymerases	62
5.4 Transcription in <i>E. coli</i>	63
5.4.1 Initiation	63
5.4.2 Elongation	67
5.4.3 Termination	68
5.5 Transcription in eukaryotes	71
5.5.1 Initiation of transcription by RNA polymerase II	71
5.5.2 Termination of transcription by RNA polymerase II	73
Reading	74
Problems	74
6 Types of RNA molecule: rRNA and tRNA	76
6.1 Ribosomal RNA	77
6.1.1 The structure of ribosomes	77
6.1.2 Synthesis of rRNAs	83
6.2 Transfer RNA	86
6.2.1 Structure of tRNAs	86
6.2.2 Processing and modification of tRNA transcripts	89
Reading	92
Problems	93
7 Types of RNA molecule: mRNA	95
7.1 Most mRNA molecules are unstable	95
7.2 Modification and processing of mRNA	96
7.3 Chemical modifications at the ends of eukaryotic mRNAs	98
7.3.1 All eukaryotic mRNAs are capped	98
7.3.2 Most eukaryotic mRNAs are polyadenylated	100
7.4 Intron splicing	101
7.4.1 Splicing of GT-AG introns	101
7.4.2 The self-splicing intron	107
7.4.3 Other types of intron	108

7.5 RNA editing	109
Reading	110
Problems	111
8 The genetic code	113
8.1 Polypeptides are polymers	114
8.1.1 Amino acids	114
8.1.2 Different levels of protein structure	116
8.1.3 The amino acid sequence is the key to protein structure and function	118
8.2 The genetic code	119
8.2.1 The code from first principles	120
8.2.2 Elucidation of the code	123
8.2.3 Features of the code	126
Reading	129
Problems	130
9 Translation	132
9.1 The role of tRNA in translation	132
9.1.1 Aminoacylation of tRNA	132
9.1.2 Codon recognition	135
9.2 The mechanics of protein synthesis in <i>E. coli</i>	138
9.2.1 Initiation of translation	138
9.2.2 Elongation of the polypeptide chain	142
9.2.3 Chain termination	145
9.3 Translation in eukaryotes	146
Reading	148
Problems	149
10 Control of gene expression	151
10.1 Why control gene expression?	151
10.1.1 Gene regulation in <i>E. coli</i>	151
10.1.2 Gene regulation in multicellular organisms	153
10.2 Possible strategies for controlling gene expression	154
10.3 Control of gene expression in bacteria	155
10.3.1 Regulation of lactose utilization	156
10.4 Upstream sites and DNA-binding proteins	164
10.4.1 Upstream sites for eukaryotic genes	165
10.4.2 DNA-binding proteins	167
10.5 Gene regulation during development	168
10.5.1 Developmental mutants in <i>Drosophila</i>	169
10.5.2 The homeobox	170
Reading	171
Problems	172
11 Replication of DNA molecules	174
11.1 The overall pattern of DNA replication	174

11.1.1 The Meselson–Stahl experiment	176
11.2 The mechanism of DNA replication in <i>E. coli</i>	179
11.2.1 DNA polymerase	179
11.2.2 Events at the replication fork	181
11.2.3 The topological problem	185
11.3 DNA replication in eukaryotes	186
11.4 Replication of molecules	187
Reading	188
Problems	189
12 Alterations in the genetic material	191
12.1 Mutations	193
12.1.1 Different types of mutation	193
12.1.2 Reversing the effect of a mutation	198
12.1.3 Mutagens	200
12.2 DNA repair	205
12.3 Recombination	207
12.3.1 Generalized recombination	208
12.3.2 The role of recombination in genetics	210
Reading	212
Problems	213
 PART TWO GENOMES	
13 Viruses – the simplest forms of life	219
13.1 Bacteriophages	220
13.1.1 Bacteriophage genomes can be DNA or RNA	221
13.1.2 Bacteriophage life cycles	222
13.1.3 Organization and expression of bacteriophage genes	227
13.2 Viruses of eukaryotes	233
13.2.1 Structures and infection cycles of eukaryotic viruses	233
13.2.2 Replication strategies for eukaryotic viruses	236
13.2.3 Retroviruses and cancer	240
Reading	242
Problems	243
14 Prokaryotic genomes	245
14.1 The bacterial nucleoid	245
14.2 Prokaryotic genes	248
14.2.1 Eubacterial genes	248
14.2.2 Archaeal genes	250
14.3 Plasmids	251
14.3.1 Different types of plasmid	252
14.3.2 Plasmids and bacterial sex	253
14.3.3 Copy number and incompatibility	257
14.4 Bacterial transposons	258
Reading	262
Problems	263

15 Eukaryotic genomes	265
15.1 The nuclear genome	265
15.1.1 The organization of nuclear genomes	267
15.2 Packaging DNA into chromosomes	268
15.2.1 Proteins, DNA and chromatin	268
15.3 Chromosome morphology	271
15.3.1 Centromeres	273
15.3.2 Telomeres	274
15.4 The cell cycle	277
15.4.1 Events during the cell cycle	278
15.4.2 Control of the cell cycle	281
15.5 Extrachromosomal genes	281
15.5.1 Organellar genetic systems	282
15.5.2 Organellar genomes	283
Reading	287
Problems	288
16 The human genome	290
16.1 The structure of the human genome	290
16.1.1 Genes and gene families	290
16.1.2 Extragenic DNA	294
16.1.3 The Human Genome Project	296
16.2 The human genome as a tool to trace mankind's origins	299
16.2.1 Polymorphisms in the human genome	299
16.2.2 The ancient DNA time machine	304
Reading	305
Problems	306
PART THREE STUDYING GENES	
17 What Mendel discovered	309
17.1 The scientific examination of inheritance	309
17.1.1 The monohybrid crosses	311
17.1.2 Crosses involving two pairs of characteristics	316
17.2 How molecular genetics relates to Mendel	318
17.2.1 Each gene exists as a pair of alleles	318
17.2.2 Dominance and recessiveness	320
17.2.3 Mendel's Laws – molecular explanations	325
Reading	325
Problems	326
18 Using Mendelian genetics to study eukaryotic genes	328
18.1 Linkage	328
18.1.1 Thomas Hunt Morgan and the development of gene mapping	330
18.2 Gene mapping with microbial eukaryotes	337
18.2.1 Gene mapping with <i>S. cerevisiae</i>	337

18.3 Taking Mendelian genetics beyond gene mapping	347
18.3.1 A single gene may give rise to a complex phenotype	348
18.3.2 Complex phenotypes that result from interactions between genes	349
Reading	352
Problems	353
19 Genetic analysis of bacteria	356
19.1 Basic features of gene mapping in bacteria	356
19.2 Mapping by conjugation	359
19.2.1 The interrupted mating experiment	359
19.3 Mapping by transduction	363
19.3.1 The discovery of transduction	363
19.3.2 Mapping genes by transduction	366
19.4 Mapping by transformation	368
19.5 Relative merits of the three methods	372
Reading	372
Problems	373
20 Cloning genes	375
20.1 What is gene cloning?	375
20.2 Constructing recombinant DNA molecules	378
20.2.1 Enzymes for cutting DNA: restriction endonucleases	378
20.2.2 Ligases join DNA molecules together	381
20.3 Cloning vectors and the way they work	382
20.3.1 Cloning with pBR322	383
20.3.2 Other types of cloning vector for <i>E. coli</i>	385
20.4 Cloning vectors for eukaryotes	389
20.4.1 Cloning vectors for <i>Saccharomyces cerevisiae</i>	390
20.4.2 Vectors for plants and animals	392
Reading	393
Problems	394
21 Studying cloned genes	395
21.1 Identifying a gene in a genomic library	395
21.1.1 Hybridization probing	395
21.1.2 Chromosome walking	400
21.2 DNA sequencing: working out the structure of a gene	403
21.2.1 The Sanger–Coulson method: chain-terminating nucleotides	403
21.2.2 The power of DNA sequencing	405
21.3 Studying gene expression	406
21.3.1 Transcript analysis	406
21.3.2 Studying gene regulation	408
21.4 Determining the function of a protein coded by a cloned gene	413
21.5 Cloned genes in biotechnology	414
21.5.1 Bacteria are not ideal hosts for recombinant protein	414

21.5.2 Synthesis of recombinant proteins in eukaryotes	415
21.6 The future for molecular genetics	416
Reading	417
Problems	418

<i>Answers to selected problems</i>	419
<i>Glossary</i>	425
<i>Index</i>	457
