1 An introduction to real-time PCR	1
<i>Gregory L. Shipley</i>	
1.1 Introduction	1
1.2 A brief history of nucleic acid detection and quantification	3
1.3 Real-time quantitative PCR – a definition	3
1.4 Practical and theoretical principles underlying real-time PCR	12
1.5 Real-time PCR instrumentation – an overview	16
1.6 Detection chemistries used in real-time PCR	25
1.7 Performing a real-time RT-PCR experiment	29
1.8 What lies ahead	30
References	32
Protocol 1.1	33
Protocol 1.2	35
Protocol 1.3	36
Protocol 1.4	37
Protocol 1.5	
2 Data analysis and reporting	39
<i>Pamela Scott Adams</i>	
2.1 Introduction	39
2.2 Standard curves	40
2.3 Preliminary assay analysis	45
2.3.1 Amplification curves	46
2.3.2 Baseline	47
2.3.3 Threshold	50
2.3.4 Proper controls	52
2.3.5 Experimental samples	56
2.3.6 Quantifying data	57
2.4 Data reporting and statistics	59
References	61

3	Relative quantification	63
	<i>Michael W. Pfaffl</i>	
3.1	Introduction	63
3.2	Relative quantification: The quantification is relative to what?	64
3.3	Normalization	65
3.4	Mathematical models	66
3.5	Real-time qPCR amplification efficiency	68
3.6	Determination of the amplification rate	69
3.6.1	Dilution method	70
3.6.2	Fluorescence increase in exponential phase	71
3.6.3	Sigmoidal or logistic curve fit	72
3.6.4	Efficiency calculation in the exponential phase using multiple models	73
3.7	What is the right crossing point to determine?	75
3.8	Relative quantification data analysis and software applications	76
3.8.1	LightCycler® Relative Quantification Software	76
3.8.2	REST	77
3.8.3	Q-Gene	78
3.8.4	qBASE	78
3.8.5	SoFAR	79
3.8.6	DART-PCR	79
3.9	Conclusion	79
	References	80
4	Normalization	83
	<i>Jim Huggett, Keertan Dheda and Stephen A. Bustin</i>	
4.1	Introduction	83
4.2	General error and directional shift	83
4.3	Methods of normalization	84
4.3.1	Sample size	84
4.3.2	Total RNA amount	86
4.3.3	Quantification of cDNA	87
4.3.4	PCR dependent reference	87
4.4	Conclusion	90
	References	90
5	High-throughput primer and probe design	93
	<i>Xiaowei Wang and Brian Seed</i>	
5.1	Primer and probe design guidelines	93
5.1.1	Primer specificity	93
5.1.2	Primer length	93
5.1.3	Primer GC content	93
5.1.4	Primer 3' end stability	94
5.1.5	Primer sequence complexity	94
5.1.6	Primer melting temperature	94
5.1.7	Primer location in the sequence	95
5.1.8	Amplicon size	96
5.1.9	Cross-exon boundary	96
5.1.10	Primer and template sequence secondary structures	96
5.1.11	TaqMan® probe design	96

5.1.12	Molecular beacon probe design	97
5.2	PrimerBank – an online real-time PCR primer database	97
5.2.1	Primer design algorithm	97
5.2.2	PrimerBank	100
5.2.3	Experimental validation of the primer design	101
5.3	Experimental protocol using PrimerBank primers	101
5.3.1	Reverse transcription (RT)	101
5.3.2	Real-time PCR	102
5.3.3	Troubleshooting	103
5.3.4	Little or no PCR product	103
5.3.5	Poor PCR amplification efficiency	103
5.3.6	Primer dimer	103
5.3.7	Multiple bands on gel or multiple peaks in the melting curve	104
5.3.8	Non-specific amplification	104
5.4	Web resources about primer and probe design	104
5.4.1	Real-time PCR primer and probe databases	104
5.4.2	Primer and probe design tools	104
5.4.3	Other useful web sites	105
	References	105
6	Quantitative analysis of ocular gene expression	107
	<i>Stuart N. Peirson</i>	
	Summary	107
6.1	Introduction	107
6.1.1	Gene expression in the eye	107
6.1.2	Problems associated with ocular gene expression	108
6.2	Relative quantification	112
6.2.1	The R_0 method	112
6.2.2	Kinetic approaches to qPCR	114
6.2.3	Accurate normalization	116
6.3	Assay considerations	118
6.4	Conclusions	124
	Acknowledgments	124
	References	124
7	Quantitative gene expression by real-time PCR: a complete protocol	127
	<i>Thomas D. Schmittgen</i>	
7.1	Introduction	127
7.2	Materials	127
7.2.1	Reagents and consumables	127
7.2.2	Equipment	128
7.3	Procedure	128
7.3.1	Sample preparation	128
7.3.2	Isolation of RNA from cultured cells or blood	128
7.3.3	Isolation of RNA from whole tissue	129
7.3.4	RNA quantification	130
7.3.5	DNase treatment	130
7.3.6	cDNA synthesis	130
7.3.7	SYBR® Green	131
7.3.8	Primer design	131

7.3.9	Real-time PCR	132
7.3.10	Data analysis	133
7.4	Troubleshooting	135
7.5	Critical steps	136
7.6	Comments	136
	References	137
8	Real-time PCR using SYBR® Green	139
	<i>Frederique Ponchel</i>	
8.1	Introduction	139
8.2	SYBR® Green chemistry	139
8.3	Primer design	140
8.3.1	Step by step primer design: β -actin for a cDNA quantification assay	141
8.4	Primer optimization	142
8.4.1	Absolute quantification of gene expression	142
8.4.2	Relative quantification of gene expression	142
8.4.3	Relative quantification of different gene modifications (amplification, deletion, rearrangement, translocation)	145
8.5	Melting curve analysis	146
8.6	Quantification of gene modification	146
8.6.1	DNA quantification	147
8.6.2	Gene amplification	147
8.6.3	Gene deletion	147
8.6.4	Gene rearrangement	148
8.6.5	Gene copy number	149
8.7	RNA quantification	149
8.7.1	RNA extraction	149
8.7.2	cDNA preparation	149
8.7.3	Reference gene validation	150
8.7.4	Splice variants and splicing machinery	150
8.7.5	Promoter switch	150
8.8	Allelic discrimination	152
8.9	Chromatin immunoprecipitation	152
8.10	Conclusion	152
	References	153
9	High-resolution melting analysis for scanning and genotyping	155
	<i>Virginie Dujols, Noriko Kusakawa, Jason T. McKinney, Steven F. Dobrowolsky and Carl T. Wittwer</i>	
9.1	Introduction	155
9.2	High-resolution instrumentation	156
9.2.1	The HR-1™ instrument	156
9.2.2	The LightScanner™ instrument	156
9.2.3	The LightCycler® 480 instrument	157
9.3	Saturating dyes	157
9.3.1	LCGreen™ dyes	158
9.4	Mutation scanning	159
9.4.1	PCR protocols for scanning	159
9.4.2	Principles of scanning by melting	160

9.4.3	Software tools for heterozygote identification	161
9.4.4	Scanning for homozygous variants	163
9.5	Amplicon genotyping	163
9.6	Unlabeled probe genotyping	164
9.6.1	PCR protocols for unlabeled probe genotyping	164
9.6.2	Instrumentation for unlabeled probe genotyping	165
9.6.3	Simultaneous genotyping and scanning	165
9.7	Simplification of genotyping and mutation scanning	165
	References	167
10	Quantitative analyses of DNA methylation	171
	<i>Lin Zhou and James (Jianming) Tang</i>	
10.1	Introduction	171
10.2	<i>MDR1</i> (<i>ABCB1</i> , Gene ID 5243) as a primary target locus	172
10.3	Primer design	173
10.4	Data evaluation: I. Assay-to-assay variability	174
10.5	Data evaluation: II. <i>MDR1</i> CpG methylation as quantified by qPCR	174
10.6	Expanded analyses	176
	Acknowledgments	176
