

# Contents

*Symposium on Stem cells: nuclear reprogramming and therapeutic applications, held at the Novartis Foundation, London, 2-4 March 2004.*

*Editors: Gregory Bock (Organizer) and Jamie Goode*

*This symposium is based on proposals made by Karin Blumer and Uwe Junker, and Adam Wilkins*

**John Gearhart** Chair's introduction 1

**Davor Solter** What is a stem cell? 3

*Discussion* 12

**Markus Grompe** Bone marrow-derived hepatocytes 20

*Discussion* 28

**Irving L. Weissman** Normal and neoplastic stem cells 35

*Discussion* 50

**Catherine M. Verfaillie** Multipotent adult progenitor cells: an update 55

*Discussion* 61

**Steven A. Goldman and Fraser Sim** Neural progenitor cells of the adult brain 66

*Discussion* 82

**General discussion I** Stem cells in the brain 92

**Martin Evans** Embryonic stem cells: a perspective 98

*Discussion* 103

**Rudolf Jaenisch, Konrad Hochedlinger and Kevin Eggan** Nuclear cloning, epigenetic reprogramming and cellular differentiation 107

*Discussion* 118

**General discussion II** 122

**J. B. Gurdon, J. A. Byrne and S. Simonsson** Nuclear reprogramming by

*Xenopus* oocytes 129

*Discussion* 136
