

CONTENTS

1. INTRODUCTION	1
Interrelationship of Plant Physiology with other Branches of Science. Plant Physiology as a Science. Plant Physiology and Human Welfare.	
2. SOLUTIONS AND COLLOIDAL SYSTEMS	9
General Nature of Solutions. Methods of Expressing the Composition of Solutions. Electrolytes and Nonelectrolytes. Acids, Bases, and Salts. Normal Solutions. Hydrogen Ion Concentration. Buffer Action. General Nature of Colloidal Systems. Interfacial Area of Colloidal Systems. Adsorption. The Nomenclature of Colloidal Systems. Brownian Movement. Electrical Properties. Flocculation. Properties of Gels.	
3. PLANT CELLS	23
The Origin and Development of Cells. The Structure of Plant Cells. Cell Membranes. Organelles. The Vacuole. The Cell Wall.	
4. DIFFUSION, OSMOSIS, AND IMBIBITION	40
Diffusion of Gases. Factors Influencing the Rate of Diffusion of Gases. Diffusion of Solutes. Osmosis. Membranes and Permeability. Free Energy and the Concept of Water Potential.	

Osmotic Pressure. Turgor Pressure. Quantitative Aspects of Osmosis. Factors Influencing the Osmotic Potential of Solutions. Imbibition. Dynamics of Imbibition. Osmotic Effects on Imbibition. Quantitative Aspects of Imbibition.

5. WATER RELATIONS OF PLANT CELLS

56

The Plant Cell as an Osmotic System. Plasmolysis. Magnitude of the Osmotic Potentials in Plant Cells. Factors Influencing the Osmotic Potential of Plant Cells. The Osmotic Quantities of Plant Cells. Dynamics of the Osmotic Movement of Water in Plants. The Imbibitional Mechanism of the Movement of Water. Relation Between Osmotic and Matric Potentials. Possible Metabolically Activated Movement of Water in Plants.

6. LOSS OF WATER FROM PLANTS

69

The Mechanics of Foliar Transpiration. Stomates. Size and Distribution of the Stomates. Mechanics of the Opening and Closing of the Stomates. Diffusive Capacity of the Stomates. The Magnitude of Transpiration. Factors Affecting Transpiration. Effects of Structural Features of Plants on the Rate of Transpiration. The Daily Periodicity of Transpiration. Factors Influencing Leaf Temperatures; The Role of Transpiration. The Loss of Water in Liquid Form from Plants.

7. ABSORPTION OF WATER

96

Components of the Soil. Soil-Water Relations Under Field Conditions. Permanent Wilting Percentage. Soil-Water Potential. Roots and Root Systems. The Absorbing Region of Roots. Anatomy of Roots. Root Hairs. The Pathway of Water Through the Root. Mycorrhizas. The Absorption of Water by Roots. Mechanism of the Absorption of Water. Environmental Factors Influencing the Rate of Absorption of Water. Absorption of Water by Leaves.

8. INTERNAL WATER RELATIONS

123

The Path of Water Through the Plant. Anatomy of Stems. Theories of the Mechanism of the Translocation of Water Through Plants. Magnitude of the Cohesion of Water. Development of Tension in the Water Columns. The Relation of Transpiration to the Movement of Water Through the Plant. Lateral Movement of Water. Downward Movement of Water. Wilting. Comparative Daily Periodicities of Transpiration and the Absorption of Water. Daily

Variations in The Water Potential of Plant Cells. Permanent Wilting.
Internal Redistributions of Water in Plants. Drought Resistance.

9. KINETICS AND ENERGETICS OF METABOLISM 154

Enzymes. Classification of Enzymes. Chemical Nature of Enzyme Systems. Enzyme Induction. Mechanism of Enzyme Action. Factors Affecting Enzymatic Reactions. Free Energy. High Energy Compounds. Oxidation-Reduction Reactions.

10. PHOTOSYNTHESIS 173

Radiant Energy. The Overall Process of Photosynthesis. Leaf Anatomy in Relation to Photosynthesis. The Chloroplast Pigments. The Chlorophylls. Chlorophyll Synthesis. The Carotenoids. The Phycobilins. Structure of the Chloroplasts. Roles of the Chloroplasts. The "Light" and "Dark" Reactions of Photosynthesis. The Photosynthetic Unit. The Hill Reaction. Source of the Oxygen Released in Photosynthesis. Bacterial Photosynthesis. Photophosphorylation. Photosynthetic Enhancement. Conversion of Radiant Energy into Chemical Energy. The Carbon Pathway in Photosynthesis.

11. FACTORS AFFECTING PHOTOSYNTHESIS 203

The Principle of Limiting Factors. Apparent and True Photosynthesis. The Role of Carbon Dioxide. The Role of Light. Temperature Effects on Photosynthesis. The Role of Water in Photosynthesis. Effect of Oxygen Concentration on Photosynthesis. The Effects of Internal Factors on the Rate of Photosynthesis. Daily Variations in the Rate of Photosynthesis. Magnitude and Efficiency of Photosynthesis.

12. RESPIRATION 224

Aerobic Respiration. Comparative Rates of Respiration. The Respiratory Ratio. Factors Affecting the Rate of Aerobic Respiration. The Light Compensation Point. The Carbon-Dioxide Compensation Point. Photorespiration.

13. METABOLIC PATHWAYS OF RESPIRATION 240

Anaerobic Respiration. Glycolysis. Anaerobic Oxidation of Pyruvic Acid. Aerobic Oxidation of Pyruvic Acid. Electron Transport and Oxidative Phosphorylation. Efficiency of the Respiration Process. The Pentose Phosphate Pathway. Respiration in Relation to the Mitochondria. Dark Fixation of Carbon Dioxide and Its Relation to Organic Acid Metabolism.

14. METABOLISM OF CARBOHYDRATES, LIPIDS AND RELATED COMPOUNDS	265
Isomerism in Monosaccharides. Reactive States of Sugars. Monosaccharide Interconversions. Plant Alcohols. Oligosaccharide Biosynthesis. Metabolism of Food Reserve Polysaccharides. Metabolism of Structural Polysaccharides. The Glycosides. The Anthocyanins. The Anthoxanthins. Lipids. Fat Synthesis. β -Oxidation of Fatty Acids. Fatty Acids and Glycerol in Relation to Respiration. Fat to Sugar Conversion. Phospholipids. Sterols. Waxes. Cutin and Suberin. The Isoprenoids.	
15. ABSORPTION AND UTILIZATION OF MINERAL SALTS	293
Elements Found in Plants. Soil-Associated Cation Exchange. Passive Ion Uptake. Active Uptake of Ions. The Carrier Hypothesis of Active Ion Uptake. General Aspects of Salt Accumulation. Salt Accumulation and Organic Acid Metabolism. Absorption of Mineral Salts by Aerial Organs. General Roles of the Mineral Elements in Plants. Utilization of Mineral Salts. Essential and Nonessential Elements. Specific Roles of the Mineral Elements in Plants. Symptoms of Mineral Element Deficiency. Solution and Sand Cultures.	
16. NITROGEN METABOLISM	323
The Proteins. The Amino Acids. Origin of the Nitrogenous Compounds Used by Plants. Absorption of Nitrogenous Compounds From the Soil. Reduction of Nitrates and Sulfates. Synthesis of Amino Acids. Asparagine and Glutamine. Nucleosides, Nucleotides, and Nucleic Acids. Protein Synthesis. The Alkaloids.	
17. TRANSLOCATION OF SOLUTES	351
Anatomy of Phloem Tissues. General Aspects of the Translocation of Solute in Plants. Downward Translocation of Organic Solute. Upward Translocation of Organic Solute. Upward Translocation of Mineral Elements. Outward Movement of Mineral Elements from Leaves and Other Lateral Organs. Lateral Translocation of Solute. Mechanism of Translocation of Solute in the Xylem. Basic Aspects of the Physiology of Translocation in the Phloem. Theories of the Mechanism of the Translocation in the Phloem.	
18. PLANT HORMONES	376
The Auxins. Chemical Nature of the Auxins. Roles of the Auxins. Translocation of Auxins. The Gibberellins. Chem-	

istry of Gibberellins. Roles of the Gibberellins. Synthesis and Translocation of the Gibberellins. The Cytokinins. Roles of the Cytokinins. Synthesis of Cytokinins. Absciscic Acid. Roles of Absciscic Acid. Vitamins. Ethylene. Effects of Ethylene. Other Hormone-like Substances in Plants. Mechanism of Hormone Action. Interactions among Hormones.

19. VEGETATIVE GROWTH

408

Assimilation. Growth as a Process. Meristems. Dynamics of Primary Growth. Development of Lateral Organs. Lateral Growth of Stems and Roots. Culture of Root Tips and Stem Tips on Synthetic Media. Totipotency. Genetic Basis of Morphogenic Development. Measures or Indices of Growth. Rates of Growth. Accumulation of Foods.

20. ENVIRONMENTAL FACTORS INFLUENCING VEGETATIVE GROWTH

431

Environmental Factors Influencing Plant Growth. Effects of Temperature upon the Rates and Incidence of Growth Processes. Temperature Limitations upon Plant Survival. Morphogenic Effects of Temperature. Thermoperiodicity. Cold Injury and Cold Resistance. Heat Injury and Heat Resistance. Effects of Radiant Energy on Vegetative Growth. Light Quality Effects on Vegetative Growth. Effects of the Internal Water Status on Vegetative Growth. Effects of Concentration of the Soil Solution on Vegetative Growth. Effects of Concentration of Gases in the Soil Atmosphere on Vegetative Growth. Effects of Mineral Elements on Growth. Effects of Nitrogen on Growth. Effects of Atmospheric Gases and Pollutants on Growth.

21. REPRODUCTIVE GROWTH

464

Initiation and Development of Flowers. Pollen and Pollination. Pollen as the Causal Agent of Hayfever. Initiation of Embryo and Endosperm Growth. Apomixis. Development of the Seed. Development of Fruits. Parthenocarpy. Some Physiological Aspects of Fruit Development. Embryo Culture.

22. ENVIRONMENTAL FACTORS AFFECTING REPRODUCTIVE GROWTH

481

Effects of Irradiance on Reproductive Growth. Effects of Light Quality on Reproductive Growth. Effects of Duration of Light on Reproductive Growth. Seasonal and Geographic Aspects of Photoperiodism. Long-Day and Short-Day Plants as the Basic Categories. Photoperiodic Induction. The Generalized Mechanism of Photo-

periodism. Basic Differences in the Photoperiodic Reactions of Long-Day and Short-Day Plants. Basic Similarities in the Photoperiodic Mechanism of Long-Day and Short-Day Plants. Rhythmic Behavior of Plant Processes. Endogenous Rhythms in Relation to Photoperiodism. Temperature Effects on Reproductive Growth. Vernalization. Carbohydrate and Nitrogen Metabolism.

23. GROWTH CORRELATIONS AND GROWTH PERIODICITY 507

Growth Correlations. Correlations Between Reproductive and Vegetative Development. The Shoot-Root Ratio. Apical Dominance. Mechanism of Apical Dominance. Cambial Activity. Growth Correlations Between Leaves and Buds. Polarity. Growth Periodicity. Daily Periodicity of Growth. Seasonal Periodicity of Vegetative Growth. Cyclical Periodicity of Vegetative and Reproductive Growth. Cyclical Periodicity of Vegetative Growth in Tropical Species. Seasonal Periodicity of Foliage Coloration. Abscission. Mechanism of Abscission. Abscission of Organs Other than Leaves.

24. GERMINATION AND DORMANCY 530

The Structure of Seeds. Germination. Water in Relation to Germination. Light and Germination. Temperature and Germination. Embryo Development as a Factor in Germination and Dormancy. Oxygen and Germination. The Germination Process in Barley Seeds. General Aspects of the Germination Process. Longevity of Seeds. Dormancy of Buds. Breaking of Bud Dormancy. Methods of Prolonging Dormancy of Buds.
