

CONTENTS

I. GENERAL INTRODUCTION	7
II. FUNCTIONAL PROPERTIES	9
1. FUNCTIONAL PROPERTIES IN INDUSTRIAL APPLICATIONS	9
1.1. Methods of characterization	10
2. FACTORS AFFECTING FUNCTIONAL PROPERTIES	10
2.1. Environmental conditions	11
2.2. Purity	11
2.3. Changes during processing and storage	11
2.4. Deliberate modification	13
3. SOLUBILITY	15
3.1. Protein properties	15
3.2. Solvent properties	15
3.3. Practical tests	16
4. GEL FORMATION AND PROPERTIES	17
4.1. Rheological characterization	17
4.2. Functional properties	18
5. TEXTURIZING	19
5.1. Functionality	20
5.2. Extrusion cooking	20
5.3. Spinning	20
5.4. Restructured meat products	21
5.5. Tissue engineering	21
6. ADHESIVENESS	21
7. EMULSION FORMATION	22
7.1. Surface phenomena	22
7.2. Processes occurring during emulsification	23
7.3. Estimating protein functionality	24
8. EMULSION AND SUSPENSION STABILITY	24
8.1. Instability	25
8.2. Emulsion stability tests	27
9. FOAM FORMATION AND STABILITY	27
9.1. Foam formation	28
9.2. Stability	28
9.3. Testing for protein functionality	29
10. CONCLUSIONS	30
FURTHER READING	30

III. GLOBULAR PROTEINS	31
1. INTRODUCTION	31
1.1. Globularity of proteins.....	31
1.2. Protein folding	32
1.3. Protein structural classes.....	36
1.4. Multi-domain proteins	38
1.5. Protein denaturation.....	39
2. EGG WHITE PROTEINS – OVALBUMIN.....	40
2.1. General properties of egg proteins	40
2.2. Applications of egg white proteins in food.....	42
2.3. Molten globule state.....	42
2.4. S-ovalbumin, a thermostabilized form of ovalbumin.....	43
3. THE PRINCIPAL BOVINE WHEY PROTEIN β-LACTOGLOBULIN: A STRUCTURE-FUNCTION ANALYSIS.....	44
3.1. Introduction.....	44
3.2. Structure of β -lactoglobulin.....	44
3.3. Reproducible food functionalities	48
4. PEA LEGUMINS AND VICILINS.....	49
4.1. Isolation	49
4.2. Characterization	50
4.3. Functional properties	53
4.4. Industrial applications.....	55
5. SOYBEAN PROTEINS: STRUCTURE AND FUNCTION	55
5.1. Introduction.....	55
5.2. Industrial applications of soybean.....	56
5.3. Soy proteins and their molecular architecture.....	56
5.4. Structure-function relationships.....	58
5.5. Forecast.....	62
6. SUNFLOWER SEED PROTEINS.....	62
6.1. Introduction.....	62
6.2. Isolation	63
6.3. Characterization	63
6.4. Functional properties	64
6.5. Industrial applications.....	66
7. POTATO TUBER PROTEINS	66
7.1. Introduction.....	66
7.2. Structure and biological properties	66
7.3. Fractionation and isolation.....	69
7.4. Functional properties and application	69
7.5. Drawbacks in application.....	72
8. FOOD SAFETY AND CONCLUDING REMARKS	72
8.1. Food safety.....	73
8.2. Concluding remarks	77
REFERENCES	78

IV. GLUTEN	87
1. GENERAL INTRODUCTION	87
2. MOLECULAR AND STRUCTURAL ASPECTS OF GLUTEN PROTEINS	88
2.1. Genetics of gluten proteins	88
2.2. Conformational aspects	92
2.3. Physico-chemical aspects of gluten proteins	94
3. GLUTEN FUNCTIONS IN FOOD	103
3.1. Applications in bread	103
3.2. Biscuit/cookie bakery products	106
3.3. Pasta	112
4. NON-FOOD APPLICATIONS OF GLUTEN	115
4.1. Introduction and scope	115
4.2. Current applications of gluten	116
4.3. Towards future applications	117
4.4. Known structure-function relations	125
4.5. Research issues and future directions	125
5. GENERAL DISCUSSION	126
REFERENCES	127
 V. COLLAGEN AND GELATIN	 133
1. INTRODUCTION	133
2. STRUCTURE AND BIOSYNTHESIS OF COLLAGEN	134
2.1. The collagen triple helix	134
2.2. Collagen biosynthesis	141
2.3. Collagen fibrillogenesis	146
3. OUTLINE OF INDUSTRIAL PRODUCTION PROCESSES	151
3.1. Industrial production of collagen for food applications	151
3.2. Industrial production of collagen for medical applications	151
3.3. Industrial production of gelatin	153
4. STRUCTURE AND RHEOLOGY OF GELATIN GELS	159
4.1. Molecular structure of gelatin gels	159
4.2. The gelatin matrix structure as studied by optical rotation in relation to gelling properties – a comparison of various gelatin samples	167
4.3. An overview of the viscoelastic behaviour of gelatin in the sol and gel state in dilute and semi-dilute systems	183
4.4. Surface activity and related properties of gelatin	189
5. RECOMBINANT GELATIN AND COLLAGEN	190
5.1. Why recombinant production?	190
5.2. A comparison of possibilities	191
5.3. An overview of developments	192
