

Contents

Preface — Yu.A. Ovchinnikov and M.N. Kolosov	vii
List of Contributors	ix
Chapter 1 The nature of the bonds formed by transition metals in bioorganic compounds and other compounds — L. Pauling	1
Chapter 2 The invention of organic reactions useful in bioorganic chemistry — D.H.R. Barton	21
Chapter 3 Recent advances in the chemistry of natural products — R.B. Woodward	39
Chapter 4 Synthesis and antiviral activities of new 5-substituted pyrimidine nucleoside analogs — P.F. Torrence, E. de Clercq, J. Deschamps, Guang-Fu Huang and B. Witkop	59
Chapter 5 Structure and properties of boromycin and its degradation products — V. Prelog	87
Chapter 6 The phalloidin story — Th. Wieland and H. Faulstich	97
Chapter 7 Antiviral, antimitogenic and antimalarial activities of synthetic analogues of <i>S</i> -adenosyl-homocysteine — H.Robert-Géro and E. Lederer	113
Chapter 8 Ion transport in membranes and the ionophore problem — Yu.A. Ovchinnikov	129
Chapter 9 The β -replacing and $\alpha\beta$ -eliminating pyridoxal- <i>P</i> -dependent lyases: enantiomeric cycloserine pseudosubstrates and the	

	catalytic mechanism — A.E. Braunstein, E.V. Choryachenkova, R.A. Kazaryan, L.A. Polyakova and E.A. Tolosa	167
Chapter 10	Total synthesis of the biologically function gene — H. Gobind Khorana	191
Subject index		225
