Preface	xi
List of Contributors	xiii
Part I General Introduction	1
1 Applications of Biocalorimetry:	
Binding, Stability and Enzyme Kinetics	
<i>Ronan O'Brien and Ihtshamul Haq</i>	3
1.1 Introduction	3
1.2 Principles of isothermal titration calorimetry (ITC)	7
1.3 Applications of ITC in the life sciences	8
1.4 Thermodynamic signatures of non-covalent interactions	10
1.5 Thermodynamic discrimination (TD)	10
1.6 ITC as a tool for studying drug–DNA interactions	13
1.7 ITC as a tool for studying protein–DNA interactions	15
1.8 The application of calorimetry for examining hydration effects	17
1.9 The use of ITC for studying the kinetics and thermodynamics of enzyme catalysis	18
1.10 Principles of differential scanning calorimetry (DSC)	21
1.11 Applications of DSC in the life sciences	22
1.12 Thermodynamic stability	23
1.13 Shelf life <i>versus</i> thermodynamic stability	24
1.14 Specific and non-specific binding	25
1.15 Intrinsic and extrinsic macromolecular stability	25
1.16 Oligomerization	25
1.17 The use of DSC for examining nucleic acid helix→coil transitions	26
1.18 Summary	30
Acknowledgements	30
References	31
Part II Isothermal Titration Calorimetry	35
2 Isothermal Titration Calorimetry: A Tutorial	
<i>James A. Thomson and John E. Ladbury</i>	37
2.1 Introduction	37
2.2 Thermodynamic characterization	38
2.3 Instrumentation	40
2.4 Raw data	42

2.5 Basic considerations for experimental set-up	43
2.6 Data analysis	50
2.7 Summary	53
Application notes	53
Acknowledgement	57
References	57
3 The Application of Isothermal Titration Calorimetry to Drug Discovery	
<i>Geoff Holdgate, Stewart Fisher and Walter Ward</i>	59
3.1 Introduction	59
3.2 Overview of the drug discovery process	60
3.3 Experimental measurement of thermodynamic binding parameters	63
3.4 ITC in drug discovery	67
3.5 Summary	78
References	78
4 Dissecting the Thermodynamics of DNA–Protein Interactions	
<i>Torleif Härd</i>	81
4.1 Introduction	81
4.2 Model systems	82
4.3 Comparison with the hydrophobic effect	83
4.4 Protonation and charged–charged hydrogen bonds	84
4.5 Dissection of the binding entropy	86
4.6 Entropy contributions to the Sso7d–DNA interaction	87
4.7 Entropy contributions to the GCN4–DNA interaction	88
4.8 Discussion	90
Acknowledgements	90
References	90
5 Salt Effects in Ribonuclease–Ligand Interactions: Screening or Competitive Binding?	
<i>Kenneth P. Murphy, Travis T. Waldron and Greta L. Schrift</i>	93
5.1 Introduction	93
5.2 Anion binding to a protein–protein complex	94
5.3 Charge–charge interactions in ribonuclease binding	96
5.4 Conclusions	103
Acknowledgement	104
References	104
6 Thermodynamics–Structure Correlations of Sulfonamide Inhibitor Binding to Carbonic Anhydrase	
<i>Daumantas Matulis and Matthew Todd</i>	107
6.1 Introduction	107
6.2 Identification of protonation reactions occurring upon binding	108
6.3 Observed thermodynamics of inhibitor binding to CA	111
6.4 Energetics of inhibitor protonation	119
6.5 Sulfonamide ‘anion’ binding thermodynamics	123

10.4 Thermal dissociation and unfolding of the protein–DNA complex	195
10.5 The heat capacity change of protein–DNA association	198
10.6 Discussion	201
References	202
11 Linkage Between Temperature and Chemical Denaturant Effects on Protein Stability: the Interpretation of Calorimetrically-Determined m Values	
<i>Beatriz Ibarra-Molero, Raul Perez-Jimenez, Raquel Godoy-Ruiz and Jose M. Sanchez-Ruiz</i>	203
11.1 Introduction	203
11.2 Linkage between temperature and chemical denaturant effects on protein stability	205
11.3 Calorimetrically determined urea m values	208
11.4 Calorimetrically determined guanidine m values	210
11.5 Concluding remarks	212
Acknowledgement	212
References	212
12 Thermodynamic Indications of the Molten Globule State of Cytochrome c Induced by Hydrophobic Salts	
<i>Ali A. Moosavi-Mohavedi and Jamshid Chamani</i>	215
12.1 Introduction	215
12.2 Thermodynamic description of molten globule state	218
12.3 Molten globule structure detection by isothermal titration calorimetry (ITC)	221
12.4 Enthalpic relationship with electronic transfer of molten globule state	223
12.5 Indication of molten globule state by differential scanning calorimetry (DSC)	225
Acknowledgement	227
References	227
13 Microcalorimetry as Applied to Psychrophilic Enzymes	
<i>Salvino D'Amico, Daphné Georlette, Tony Collins, Georges Feller and Charles Gerday</i>	231
13.1 Introduction	231
13.2 Cold adaptation	231
13.3 Uniformly unstable enzymes	233
13.4 Enzymes with local flexibility	234
13.5 Thermal inactivation recorded by isothermal titration calorimetry	236
13.6 Microcalorimetric determination of enzyme kinetic parameters	238
13.7 Conclusion	239
References	240

14 An Autosampling Differential Scanning Calorimeter for Study of Biomolecular Interactions

Valerian Plotnikov, Andrew Rochalski, Michael Brandts, John F. Brandts, Samuel Williston, Verna Frasca, and Lung-Nan Lin

241

14.1 Introduction to DSC

241

14.2 Description of instrument

242

14.3 Materials and methods

245

14.4 Results for ribonuclease binding to anionic inhibitors

246

14.5 Discussion

248

References

249

Appendix. Data analysis (reprinted from reference 10)
