

Table of Contents

1 The Science of Genetics 1

A Walk by the Lake 1

Genetics, a Science About Similarities and Differences 2

Three Great Milestones in Genetics 2

Mendel: Genes and the Rules of Inheritance 2

Watson and Crick: The Structure of DNA 3

The Human Genome Project: Sequencing DNA and Cataloguing Genes 4

DNA as the Genetic Material 5

DNA Replication: Propagating Genetic Information 5

Gene Expression: Using Genetic Information 5

Mutation: Changing Genetic Information 8

Genetics and Evolution 9

Levels of Genetic Analysis 10

Classical Genetics 10

Molecular Genetics 10

Population Genetics 11

Genetics in the World: Applications of Genetics to Human Endeavors 11

Genetics in Agriculture 11

Genetics in Medicine 12

Genetics in Society 13

A MILESTONE IN GENETICS: Φ X174, the First DNA Genome Sequenced 14

2 Cellular Reproduction and Model Genetic Organisms 17

Dolly 17

Cells and Chromosomes 18

The Cellular Environment 18

Prokaryotic and Eukaryotic Cells 19

Chromosomes: Where Genes are Located 20

Cell Division 21

Mitosis 23

Meiosis 27

Meiosis I 27

Meiosis II and the Outcomes of Meiosis 31

Genetics in the Laboratory: An Introduction to Some Model Research Organisms 33

Escherichia coli, a Bacterium 33

Saccharomyces cerevisiae, Baker's Yeast 35

Drosophila melanogaster, a Fruit Fly 35

Arabidopsis thaliana, a Fast-Growing Plant 36

Homo sapiens, Our Own Species 38

A MILESTONE IN GENETICS: Culturing Human Cells 38

3 Mendelism: The Basic Principles of Inheritance 42

The Birth of Genetics: A Scientific Revolution 42

Mendel's Study of Heredity 43

Mendel's Experimental Organism, the Garden Pea 43

Monohybrid Crosses: The Principles of Dominance and Segregation 44

Dihybrid Crosses: The Principle of Independent Assortment 46

Applications of Mendel's Principles 48

The Punnett Square Method 48

The Forked-Line Method 48

The Probability Method 49

Focus on The Rules of Probability 50

Formulating and Testing Genetic Hypotheses 51

The Chi-Square Test 51

Mendelian Principles in Human Genetics 53

Pedigrees 54

Mendelian Segregation in Human Families 54

Genetic Counseling 55

Focus on Binomial Probabilities 56

A MILESTONE IN GENETICS: Mendel's 1866 paper 58

4 Extensions of Mendelism 65

Genetics Grows Beyond Mendel's Monastery Garden 65

Allelic Variation and Gene Function 66

Incomplete Dominance and Codominance 66

Multiple Alleles 67

Allelic Series 68

Testing Gene Mutations for Allelism 68

Variation Among the Effects of Mutations 69

Genes Function to Produce Polypeptides 70

Why Are Some Mutations Dominant and Others Recessive? 70

Focus on Genetic Symbols 71

Gene Action: From Genotype to Phenotype 73

Influence of the Environment 73

Environmental Effects on the Expression of Human Genes 73

Penetrance and Expressivity 74

Gene Interactions 74

Epistasis 75

A MILESTONE IN GENETICS: Garrod's Inborn Errors of Metabolism 78

Pleiotropy 80

5 The Chromosomal Basis of Mendelism 85

Sex, Chromosomes, and Genes 85

Chromosomes 86

Chromosome Number 86

Sex Chromosomes 86

The Chromosome Theory of Heredity 88

Experimental Evidence Linking the Inheritance of Genes to Chromosomes 88

Chromosomes as Arrays of Genes 89

Nondisjunction as Proof of the Chromosome Theory 90

The Chromosomal Basis of Mendel's Principles of Segregation and Independent Assortment 91

Sex-Linked Genes in Human Beings 93

Hemophilia, an X-Linked Blood-Clotting Disorder 93

Color Blindness, an X-Linked Vision Disorder 93

Focus on Hemophilia 95

Genes on the Human Y Chromosome 96

Genes on Both the Human X and Y Chromosomes 96

Sex Chromosomes and Sex Determination 96

Sex Determination in Human Beings 96

Sex Determination in *Drosophila* 97

Sex Determination in Other Animals 98

Dosage Compensation of X-Linked Genes 99Hyperactivation of X-Linked Genes in Male *Drosophila* 99

Inactivation of X-Linked Genes in Female Mammals 99

A MILESTONE IN GENETICS: Morgan's Fly Room 101

6 Variation in Chromosome Number and Structure 106

Chromosomes, Agriculture, and Civilization 106

Cytological Techniques 107

Analysis of Mitotic Chromosomes 107

The Human Karyotype 108

Cytogenetic Variation: An Overview 109

Polyploidy 110

Sterile Polyploids 110

Fertile Polyploids 111

Tissue-Specific Polyploidy and Polyteny 113

Aneuploidy 114

Trisomy in Human Beings 115

Monosomy 117

Deletions and Duplications of Chromosome Segments 117

Focus on Amniocentesis and Chorionic Biopsy 118

Rearrangements of Chromosome Structure 120

Inversions 120

Translocations 121

Compound Chromosomes and Robertsonian Translocations 122

A MILESTONE IN GENETICS: Tjio and Levan Count Human Chromosomes Correctly 123

7 Linkage, Crossing Over, and Chromosome

Mapping in Eukaryotes 129

The World's First Chromosome Map 129

Linkage, Recombination, and Crossing Over 130

Exceptions to the Mendelian Principle of Independent Assortment 130

Frequency of Recombination as a Measure of Linkage Intensity 131

Crossing Over as the Physical Basis of Recombination 133

Evidence that Crossing Over Causes Recombination 133

Chiasmata and the Time of Crossing Over 134

Chromosome Mapping 136

Crossing Over as a Measure of Genetic Distance 136

Recombination Mapping with a Two-Point Testcross 136

Recombination Mapping with a Three-Point Testcross 137

Recombination Frequency and Genetic Map Distance 140

Chiasma Frequency and Genetic Map Distance 141

Cytogenetic Mapping 142

Localizing Genes Using Deletions and Duplications 142

Genetic Distance and Physical Distance 143

Linkage Analysis in Humans 144

Detecting Linked Loci by Pedigree Analysis 145

Somatic-Cell Techniques for Assigning Genes to Chromosomes 146

Recombination and Evolution 148

Evolutionary Significance of Recombination 148

Suppression of Recombination by Inversions 148

Genetic Control of Recombination 149

 Focus on Evolutionary Divergence of the Human X and Y Chromosomes 150

 A MILESTONE IN GENETICS: Mapping the Gene for Huntington's Disease 152

8 The Genetics of Microorganisms 163

Multi-Drug-Resistant Bacteria: A Ticking Timebomb? 163

Microorganisms in Genetics 164

The Genetics of Viruses 165

Bacteriophages T4 and Lambda 165

Mapping Genes in Bacteriophage 168

Bacteriophage T4: A Linear Chromosome and a Circular Genetic Map 171

The Genetics of Bacteria 173

Mutant Genes in Bacteria 173

Unidirectional Gene Transfer in Bacteria 175

Mechanisms of Genetic Exchange in Bacteria 175

Transformation 176

Conjugation 178

Transduction 182

Plasmids and Episomes 185

F' Factors and Sexduction 187

Using Partial Diploids to Map Closely Linked Genes 187

A MILESTONE IN GENETICS: Conjugation in *Escherichia coli* 189

The Evolutionary Significance of Genetic Exchange in Bacteria 190

The Genetics of Fungi 190

Focus on the Overuse of Antibiotics 191

Detecting Linkage and Mapping Genes in Yeast 192

Mapping Centromeres Using Ordered Tetrad Data 195

Constructing Linkage Maps Using Ordered Tetrad Data 197

9 DNA and the Molecular Structure of Chromosomes 204

Discovery of Nuclein 204

Functions of the Genetic Material 205

Proof That Genetic Information Is Stored in DNA 205

Proof That DNA Mediates Transformation 206

Proof That DNA Carries the Genetic Information in Bacteriophage T2 207

Proof That RNA Stores the Genetic Information in Some Viruses 208

Viroids, Heritable Infectious Naked RNA Molecules 209

Prions, Heritable Infectious Protein 209

The Structures of DNA and RNA 210

Nature of the Chemical Subunits in DNA and RNA 210

DNA Structure: The Double Helix 212

DNA Structure: Alternate Forms of the Double Helix 215

DNA Structure: Negative Supercoils *In Vivo* 215

A MILESTONE IN GENETICS: The Double Helix 216

Chromosome Structure in Prokaryotes and Viruses 219

Chromosome Structure in Eukaryotes 220

Chemical Composition of Eukaryotic Chromosomes 221

One Large DNA Molecule per Chromosome 222

Three Levels of DNA Packaging in Eukaryotic Chromosomes 225

Centromeres and Telomeres 229

Eukaryotic Genomes: Repeated DNA Sequences 231

Detection of Repeated Sequences: DNA Renaturation Kinetics 232

Focus on *In Situ* Hybridization 233

Single-Copy and Repetitive DNA Sequences in Eukaryotic Genomes 234

Repeated Sequences in the Human Genome 236

10 Replication of DNA and Chromosomes 241

Monozygotic Twins: Are They Identical? 241

Basic Features of DNA Replication *In Vivo* 242

Semiconservative Replication 242

Visualization of Replication Forks by Autoradiography 243

Unique Origins of Replication 244

Focus on Centrifugation Techniques 246

Bidirectional Replication 248

A MILESTONE IN GENETICS: DNA Replicates Semiconservatively 251

DNA Polymerases and DNA Synthesis *In Vitro* 253

Discovery of DNA Polymerase I in *Escherichia coli* 253

Multiple DNA Polymerases 255

DNA Polymerase III: The Replicase in *Escherichia coli* 256

Proofreading Activities of DNA Polymerases 257

The Complex Replication Apparatus 258

Continuous Synthesis of One Strand; Discontinuous Synthesis of the Other Strand 258

Covalent Closure of Nicks in DNA by DNA Ligase 260

Initiation of DNA Chains with RNA Primers 260

Unwinding DNA with Helicases, DNA-Binding Proteins, and Topoisomerases 262

The Replication Apparatus: Prepriming Proteins, Primosomes, and Replisomes 263

Rolling-Circle Replication 266

Unique Aspects of Eukaryotic Chromosome Replication 267

The Cell Cycle 267

Multiple Replicons per Chromosome 268

Two or More DNA Polymerases at a Single Replication Fork 269

Duplication of Nucleosomes at Replication Forks 270

Telomerase: Replication of Chromosome Termini 271

Telomere Length and Aging in Humans 272

11 Transcription and RNA Processing 279

Storage and Transmission of Information with Simple Codes 279

The Genetic Control of Metabolism: An Overview 280

Transfer of Genetic Information: The Central Dogma 281

Transcription and Translation 281

Five Types of RNA Molecules 282

The Process of Gene Expression 283

Focus on Evidence for an Unstable Messenger RNA 285

An mRNA Intermediary 286

General Features of RNA Synthesis 286

Transcription in Prokaryotes 288

RNA Polymerases: Complex Enzymes 288

Initiation of RNA Chains 289

Elongation of RNA Chains 289

Termination of RNA Chains 290

Concurrent Transcription, Translation, and mRNA Degradation 291

Transcription and RNA Processing in Eukaryotes 291

Three RNA Polymerases/Three Sets of Genes 293

Initiation of RNA Chains 293

RNA Chain Elongation and the Addition of 5' Methyl Guanosine Caps 295

Termination by Chain Cleavage and the Addition of 3' Poly(A) Tails 296

RNA Editing: Altering the Information Content of mRNA Molecules 296

Interrupted Genes in Eukaryotes: Exons and Introns 298

Some Very Large Eukaryotic Genes 298

Introns: Biological Significance? 299

Removal of Intron Sequences by RNA Splicing 299

tRNA Precursor Splicing: Unique Nuclease and Ligase Activities 300

Autocatalytic Splicing 300

Pre-mRNA Splicing: snRNAs, snRNPs, and the Spliceosome 302

A MILESTONE IN GENETICS: Introns 303

12 Translation and the Genetic Code 311

Sickle-Cell Anemia: Devastating Effects of a Single Base-Pair Change 311

Protein Structure 312

Polypeptides: Twenty Different Amino Acid Subunits 312

Proteins: Complex Three-Dimensional Structures 314

Protein Synthesis: Translation 316

Overview of Protein Synthesis 316

Components Required for Protein Synthesis: Ribosomes and Transfer RNAs 317

Translation: The Synthesis of Polypeptides Using mRNA Templates 321

The Genetic Code 329

Properties of the Genetic Code: An Overview 329

Three Nucleotides per Codon 329

Deciphering the Code 330

Initiation and Termination Codons 331

Focus on the "Amber" Codon 332

A Degenerate and Ordered Code 332

A Nearly Universal Code 333

Codon-tRNA Interactions 333

Recognition of Codons by tRNAs: The Wobble Hypothesis 333

Suppressor Mutations That Produce tRNAs with Altered
Codon Recognition 334**In Vivo Confirmation of the Nature of the Genetic Code 334**

A MILESTONE IN GENETICS: Cracking the Genetic Code 336

13 Mutation, DNA Repair, and Recombination 342*Xeroderma Pigmentosum: Defective Repair of Damaged DNA in Humans* 342**Mutation: Source of the Genetic Variability Required for Evolution 343****Mutation: Basic Features of the Process 344**

Mutation: Somatic or Germinal 344

Mutation: Spontaneous or Induced 344

Mutation: Usually a Random, Nonadaptive Process 345

Adaptive, or Stationary-Phase, Mutagenesis in Bacteria 346

Mutation: A Reversible Process 347

Mutation: Phenotypic Effects 348

Mutations with Phenotypic Effects: Usually Deleterious and Recessive 348

Effects of Mutations in Human Globin Genes 349

Mutation in Humans: Blocks in Metabolic Pathways 350

Focus on Tay-Sachs Disease, A Childhood Tragedy 351

Conditional Lethal Mutations: Powerful Tools for Genetic Studies 353

The Molecular Basis of Mutation 354

Induced Mutations 356

Mutations Induced by Chemicals 357

Mutations Induced by Radiation 359

Mutations Induced by Transposable Genetic Elements 361

Expanding Trinucleotide Repeats and Inherited Human Diseases 362

Screening Chemicals for Mutagenicity: The Ames Test 362**DNA Repair Mechanisms 363**

Light-Dependent Repair 364

Excision Repair 364

Other DNA Repair Mechanisms 366

Inherited Human Diseases with Defects in DNA Repair 367**DNA Recombination Mechanisms 369**

Recombination: Cleavage and Rejoining of DNA Molecules 369

Gene Conversion: DNA Repair Synthesis Associated with Recombination 371

A MILESTONE IN GENETICS: Muller Demonstrates that X Rays Are Mutagenic 373

14 Definitions of the Gene 380

What is Life? 380

Evolution of the Concept of the Gene: Summary 381**Evolution of the Concept of the Gene: Function 383**

Mendel: Constant Factors Controlling Phenotypic Traits 383

Garrod: One Mutant Gene—One Metabolic Block 383

Beadle and Tatum: One Gene—One Enzyme 384

Focus on the Human Genome: How Many Genes? 386

One Gene—One Polypeptide 387

Evolution of the Concept of the Gene: Structure 387

The Pre-1940 Beads-on-a-String Concept 387

Discovery of Recombination Within the Gene 388

Recombination Between Adjacent Nucleotide Pairs 389

Colinearity Between the Coding Sequence of a Gene and Its Polypeptide Product 389

A Genetic Definition of the Gene 392The Complementation Test as an Operational Definition
of the Gene 392

Intragenic Complementation 396

A MILESTONE IN GENETICS: Lewis's *Cis-Trans* Position Effect 397

Limitations on the Use of the Complementation Test 398

The *rII* Locus of Bacteriophage T4 400The *rII* Mutants are Conditional Lethals 400Complementation Tests Show That the *rII* Locus Contains Two Genes 400Mapping *rII* Mutations by Two-Factor Crosses 400

Deletion Mapping 402

The *rII* Locus: Many Sites of Mutation in Two Adjacent Genes 405**Genes-Within-Genes in Bacteriophage Φ X174 406****Complex Gene-Protein Relationships 406**

Alternate Pathways of Transcript Splicing: Protein Isoforms 407

Assembly of Genes during Development: Human Antibody Chains 408

15 The Techniques of Molecular Genetics 417

Treatment of Pituitary Dwarfism with Human Growth Hormone 417

Basic Techniques Used to Identify, Amplify, and Clone Genes 418

The Discovery of Restriction Endonucleases 419

The Production of Recombinant DNA Molecules *In Vitro* 421

Amplification of Recombinant DNA Molecules in Cloning Vectors 421

A MILESTONE IN GENETICS: Restriction Endonucleases 424

Amplification of DNA Sequences by the Polymerase Chain Reaction (PCR) 428

Construction and Screening of DNA Libraries 430

Construction of Genomic Libraries 430

Construction of cDNA Libraries 432

Screening DNA Libraries for Genes of Interest 432

Biological and Physical Containment of Recombinant DNA Molecules 433

The Manipulation of Cloned DNA Sequences *In Vitro* 434

Phagemids: The Biological Purification of DNA Single Strands 434

In Vitro Site-Specific Mutagenesis 437**The Molecular Analysis of DNA, RNA, and Protein 438**

Analysis of DNAs by Southern Blot Hybridizations 438

Analysis of RNAs by Northern Blot Hybridizations 439

Analysis of Proteins by Western Blot Techniques 440

Focus on the Detection of a Mutant Gene Causing Cystic Fibrosis 441

The Molecular Analysis of Genes and Chromosomes 443

Physical Maps of DNA Molecules Based on Restriction Enzyme Cleavage Sites 443

Nucleotide Sequences: The Ultimate Fine Structure Maps 444

16 Genomics 453

Human Gene Prospecting in Iceland 453

Focus on GenBank 456

Genomics: An Overview 459**Correlated Genetic, Cytological, and Physical Maps of Chromosomes 459**

Restriction Fragment-Length Polymorphisms (RFLP) and Microsatellite Maps 460

Cytogenetic Maps 463

Physical Maps and Clone Banks 463

Map Position-Based Cloning of Genes 465

Chromosome Walks 465

Chromosome Jumps 466

The Human Genome Project 467

Mapping the Human Genome 469

Sequencing the Human Genome 470

RNA and Protein Assays of Genome Function 473

Expressed Sequences 473

Array Hybridizations and Gene Chips 474

Use of Green Fluorescent Protein as a Reporter of Protein Synthesis 475

Comparative Genomics 477

Bioinformatics 478

Prokaryotic Genomes 480

Eukaryotic Genomes 482

Genome Evolution in the Cereal Grasses 483

Genome Evolution in Mammals 484

A MILESTONE IN GENETICS: Two Drafts of the Sequence of the Human Genome 486

17 Applications of Molecular Genetics 492

Detection of the Tay-Sachs Mutation in Eight-Cell Pre-embryos 492

Use of Recombinant DNA Technology to Identify Human Genes 493

Huntington's Disease 493

Cystic Fibrosis 495

Molecular Diagnosis of Human Diseases 498**Human Gene Therapy 499****DNA Fingerprints 504**

Paternity Tests 504

Forensic Applications 505

Production of Eukaryotic Proteins in Bacteria 506

Human Growth Hormone 506

Proteins with Industrial Applications 507

Transgenic Plants and Animals 507

Transgenic Animals: Microinjection of DNA into Fertilized Eggs 507

Transgenic Plants: The Ti Plasmid of *Agrobacterium tumefaciens* 509**Reverse Genetics: Dissecting Biological Processes by Inhibiting Gene Expression 511**

Antisense RNA 511

Focus on GM Foods: Are They Safe? 512

T-DNA and Transposon Insertions 514

RNA Interference 515

A MILESTONE IN GENETICS: Trinucleotide Repeats and Human Disease 517

18 Transposable Genetic Elements 524

Maize: A Staple Crop with a Cultural Heritage 524

Transposable Elements: An Overview 525**Transposable Elements in Bacteria 526**

IS Elements 526

Composite Transposons 527

Tn3 Elements 528

The Medical Significance of Bacterial Transposons 529

Focus on Barbara McClintock, the Discoverer of Transposable Elements 530

Cut-and-Paste Transposons in Eukaryotes 531

Ac and *Ds* Elements in Maize 531

Pelements and Hybrid Dysgenesis in *Drosophila* 533

mariner, an Ancient and Widespread Transposon 535

Retroviruses and Retrotransposons 535

Retroviruses 535

Retroviruslike Elements 539

Retroposons 540

Transposable Elements in Humans 541

The Genetic and Evolutionary Significance of Transposable Elements 543

Transposons and Genome Organization 543

Transposons and Mutation 544

Evolutionary Issues Concerning Transposable Elements 544

A MILESTONE IN GENETICS: Transformation of *Drosophila* with PElements 545

19 The Genetics of Mitochondria and Chloroplasts 551

Mitochondria, Chloroplasts, and the Biological Energy Wheel 551

The Classical Genetics of Organelles 552

Leaf Variegation in Plants 552

Antibiotic Resistance in *Chlamydomonas* 554

Metabolic Defects in Yeast 555

The Molecular Genetics of Mitochondria 557

Mitochondrial DNA 557

Expression of Mitochondrial Genes 558

Interplay Between Mitochondrial and Nuclear Gene Products 559

Mitochondrial DNA and Human Disease 560

The Molecular Genetics of Chloroplasts 560

Chloroplast DNA 560

Chloroplast Biogenesis 561

The Origin and Evolution of Mitochondria and Chloroplasts 562

Eukaryotic Organelles as Endosymbionts 562

The Evolution of Mitochondria and Chloroplasts 563

A MILESTONE IN GENETICS: Using Mitochondrial DNA to Study Human Evolution 564

20 Regulation of Gene Expression in Prokaryotes and Their Viruses 569

D'Hérelle's Dream of Treating Dysentery in Humans by Phage Therapy 569

Constitutive, Inducible, and Repressible Gene Expression 571

Positive and Negative Control of Gene Expression 572

Operons: Coordinately Regulated Units of Gene Expression 574

The Lactose Operon in *E. coli*: Induction and Catabolite Repression 576

Induction 576

Catabolite Repression 578

The Tryptophan Operon in *E. coli*: Repression and Attenuation 580

Repression 580

Focus on Protein-DNA Interactions That Control Transcription of the *lac* Operon 581

Attenuation 582

A MILESTONE IN GENETICS: Jacob, Monod, and the Operon Model 585

Bacteriophage Lambda: Lysogeny or Lysis 587

Repression of Lambda Lytic Pathway Genes During Lysogeny 587

The Lambda Lytic Regulatory Cascade 589

The Lambda Switch: Lytic Development or Lysogeny 590

Temporal Sequences of Gene Expression During Phage Infection 592

Translational Control of Gene Expression 593

Post-Translational Regulatory Mechanisms 594

21 Regulation of Gene Expression in Eukaryotes 599

African Trypanosomes: A Wardrobe of Molecular Disguises 599

Spatial and Temporal Regulation of Eukaryotic Genes 600

Spatial Regulation of Tubulin Genes in Plants 600

Temporal Regulation of Globin Genes in Animals 601

Ways of Regulating Eukaryotic Gene Expression 602

Controlled Transcription of DNA 602

Alternate Splicing of RNA 602

Cytoplasmic Control of Messenger RNA Stability 603

Induction of Transcriptional Activity by Environmental and Biological Factors 604

Temperature: The Heat-Shock Genes 604

Light: The Ribulose 1,5-Bisphosphate Carboxylase Genes in Plants 605

Signal Molecules: Genes that Respond to Hormones 605

Molecular Control of Transcription in Eukaryotes	607
DNA Sequences Involved in the Control of Transcription	607
Proteins Involved in the Control of Transcription: Transcription Factors	609

Focus on GAL4, a Transcription Factor from Yeast 610

Posttranscriptional Regulation of Gene Expression by RNA Interference	612
RNAi Pathways	612
Sources of Short Interfering RNAs and MicroRNAs	614

Gene Expression and Chromosome Organization	615
Transcription in Lampbrush Chromosome Loops	615
Transcription in Polytene Chromosome Puffs	616
Molecular Organization of Transcriptionally Active DNA	616
Chromatin Remodeling	617
Euchromatin and Heterochromatin	617
Gene Silencing	618
DNA Methylation and Imprinting	621
Gene Amplification	622

Activation and Inactivation of Whole Chromosomes	624
Inactivation of X Chromosomes in Mammals	624
Hyperactivation of X Chromosomes in <i>Drosophila</i>	625

A MILESTONE IN GENETICS: The Discovery of RNA Interference 626

Hypoactivation of X Chromosomes in *Caenorhabditis* 627

22 The Genetic Control of Animal Development 632

Stem Cell Therapy: A Brave New World? 632

The Process of Development in Animals 633

Oogenesis and Fertilization	633
The Embryonic Cleavage Divisions and Blastula Formation	634
Gastrulation and Morphogenesis	635

Genetic Analysis of Development in Model Organisms 635

<i>Drosophila</i> as a Model Organism	636
<i>Caenorhabditis</i> as a Model Organism	637

Genetic Analysis of Developmental Pathways 638

Sex Determination in <i>Drosophila</i>	638
--	-----

Focus on *fruitless* 642

Sex Determination in <i>Caenorhabditis</i>	643
--	-----

Maternal Gene Activity in Development 644

Maternal-Effect Genes	644
Determination of the Dorsal-Ventral and Anterior-Posterior Axes in <i>Drosophila</i> Embryos	644

Zygotic Gene Activity in Development 647

Body Segmentation	647
Organ Formation	650
Specification of Cell Types	651

Genetic Analysis of Development in Vertebrates 653

Vertebrate Homologues of Invertebrate Genes	653
The Mouse: Insertional Mutagenesis, Transgenics, and Knockout Mutations	654
The Zebrafish: Morpholino Knockdown Mutations	656
Studies on Mammalian Stem Cells	657

A MILESTONE IN GENETICS: Mutations that Disrupt Segmentation in *Drosophila* 658

23 The Genetic Control of the Vertebrate Immune System 663

AIDS Emphasizes the Vital Role of the Immune System 663

The Immune Response: An Overview 664

Components of the Mammalian Immune System 665

Specialized Cells Mediate the Immune Response	665
Specialized Proteins Provide Immunological Specificity	666
Major Histocompatibility Antigens: Distinguishing Self from Nonself	669

The Antibody-Mediated (Humoral) Immune Response 671

The T Cell-Mediated (Cellular) Immune Response 673

Immunological Memory 674

Genome Rearrangements During B Lymphocyte Differentiation 674

Lambda Light Chain Genes Assembled from Two Gene Segments	675
Kappa Light Chain Genes Assembled from Three Gene Segments	676
Heavy Chain Genes Assembled from Four Gene Segments	676
Recombination Signal Sequences Control Somatic Recombination Events	676
Additional Diversity: Variable Joining Sites and Somatic Hypermutation	677

Antibody Class Switching 679

Assembly of T Cell Receptor Genes by Somatic Recombination 680

Regulation of Immunoglobulin Gene Expression 680

Allelic Exclusion: Only One Functional Rearrangement per Cell	680
Heavy Chain Gene Transcription: A Tissue-Specific Enhancer	680

Focus on Monoclonal Antibodies: Powerful Probes for Detecting Proteins and Other Antigens 681

A MILESTONE IN GENETICS: Antibody Gene Assembly 682

24 The Genetic Basis of Cancer 686

A Common Killer 686

Cancer: A Genetic Disease 687

The Many Forms of Cancer 687

Cancer and the Cell Cycle 688

Cancer and Programmed Cell Death 688

A Genetic Basis for Cancer 689

Oncogenes 689

Tumor-Inducing Retroviruses and Viral Oncogenes 690

Cellular Homologues of Viral Oncogenes: The Proto-Oncogenes 691

Mutant Cellular Oncogenes and Cancer 692

Chromosome Rearrangements and Cancer 694

Tumor Suppressor Genes 695

Inherited Cancers and Knudson's Two-Hit Hypothesis 695

Cellular Roles of Tumor Suppressor Proteins 696

pRB 697

p53 698

pAPC 698

pMSH2 701

pBRCA1 and pBRCA2 701

Focus on Cancer and Genetic Counseling 702

Genetic Pathways to Cancer 702

A MILESTONE IN GENETICS: The Identification of the *BRCA1* Gene 705

25 Inheritance of Complex Traits 709

Cardiovascular Disease: A Combination of Genetic and Environmental Factors 709

Complex Patterns of Inheritance 710

Quantitative Traits 710

Threshold Traits 713

Statistics of Quantitative Genetics 713

Frequency Distributions 714

The Mean and the Modal Class 714

The Variance and the Standard Deviation 715

Analysis of Quantitative Traits 716

The Multiple Factor Hypothesis 716

Partitioning the Phenotypic Variance 716

Broad-Sense Heritability 717

Narrow-Sense Heritability 717

Predicting Phenotypes 718

Artificial Selection 719

Focus on Artificial Selection 720

Quantitative Trait Loci 721

Analysis of Inbreeding and Co-Ancestry 722

The Effects of Inbreeding 723

Genetic Analysis of Inbreeding 724

Measuring Genetic Relationships 727

Correlations Between Relatives 728

Correlating Quantitative Phenotypes Between Relatives 728

Interpreting Correlations Between Relatives 728

Quantitative Genetics of Human Behavioral Traits 731

Intelligence 731

Personality 732

A MILESTONE IN GENETICS: The Minnesota Study of Twins Reared Apart 732

26 Population Genetics 737

A Remote Colony 737

The Theory of Allele Frequencies 738

Estimating Allele Frequencies 738

Relating Genotype Frequencies to Allele Frequencies:

The Hardy-Weinberg Principle 739

Applications of the Hardy-Weinberg Principle 740

Exceptions to the Hardy-Weinberg Principle 741

Using Allele Frequencies in Genetic Counseling 743

Natural Selection 743

Natural Selection at the Level of the Gene 743

Natural Selection at the Level of the Phenotype 746

Random Genetic Drift 747

Random Changes in Allele Frequencies 747

The Effects of Population Size 748

Focus on the Inbreeding Effect in Finite Populations 749

Populations in Genetic Equilibrium 750

Balancing Selection 751

Mutation-Selection Balance 752

Mutation-Drift Balance 753

A MILESTONE IN GENETICS: The Hardy-Weinberg Principle 754

27 Evolutionary Genetics 760

D'où venons nous? Que sommes nous? Ou allons nous? 760

The Emergence of Evolutionary Theory 761

Darwin's Theory of Evolution 761

Evolutionary Genetics 762

Genetic Variation in Natural Populations 763

Variation in Phenotypes 763

Variation in Chromosome Structure 764

Variation in Protein Structure 765

Variation in Nucleotide Sequences 766

Molecular Evolution 769

Molecules as "Documents of Evolutionary History" 769

Molecular Phylogenies 769

Rates of Molecular Evolution 771

Focus on Evolutionary Rates 773

Variation in Evolutionary Rates 775

The Neutral Theory of Molecular Evolution 776

Molecular Evolution and Phenotypic Evolution 777

Speciation 780

What Is a Species? 780

Modes of Speciation 780

The Genetics of Speciation 782

Human Evolution 784

Humans and the Great Apes 784

Human Evolution in the Fossil Record 784

DNA Sequence Variation and Human Origins 785

A MILESTONE IN GENETICS: The Neutral Theory of Molecular Evolution 787

Epilogue: Genetics Yesterday, Today, and Tomorrow, a Personal View 793
