

Contributors	vii
Editors' Preface	ix
F. C. Neidhardt Microbial reaction to environment: bacterial stress responses revisited in the genomic-proteomic era	1
D. Hood and R. Moxon Gene variation and gene regulation in bacterial pathogenesis	19
C. J. Dorman DNA topology and regulation of bacterial gene expression	41
I. C. Blomfield DNA rearrangements and regulation of gene expression	57
R. D. Finn, E. V. Orlova, M. van Heel and M. Buck Structures of multisubunit DNA-dependent RNA polymerases	73
M. S. B. Paget, H.-J. Hong, M. J. Bibb and M. J. Buttner The ECF sigma factors of <i>Streptomyces coelicolor</i> A3(2)	105
D. Browning, D. Lee, J. Green and S. Busby Secrets of bacterial transcription initiation taught by the <i>Escherichia coli</i> FNR protein	127
B. Müller-Hill What can be learned from the LacR family of <i>Escherichia coli</i> ?	143
R. Schleif Regulation of the L-arabinose operon in <i>Escherichia coli</i>	155
T. M. Henkin Transcription termination control in bacteria	169
K. Gerdes and J. Møller-Jensen Antisense RNAs in programmed cell death	183
J. A. Hoch Control of signal transduction in the sporulation phosphorelay	199
R. Dixon A stranglehold on a transcriptional activator by its partner regulatory protein – the case of the NifL–NifA two-component regulatory system	213
D. A. Morrison Is anybody here? Cooperative bacterial gene regulation via peptide signals between Gram-positive bacteria	231
