|-----|---------------------------------------------------------------------------------------------------------------------------|-----|
|     | Preface                                                                                                                   | 7   |
| 1   | High-temperature Superconductivity. <i>V. L. Ginzburg and D. A. Kirzhnits</i>                                             | 11  |
|     | References                                                                                                                | 17  |
| 2   | Superconductivity and Dielectric Function. <i>O. V. Dolgov, D. A. Kirzhnits, and E. G. Maksimov</i>                       | 18  |
| 2.1 | Introduction                                                                                                              | 18  |
| 2.2 | Response Functions of an Equilibrium, Homogeneous and Isotropic Medium and the Admissible Regions for Their Static Values | 19  |
| 2.3 | Existence of Negative Static Dielectric Function in Various Systems                                                       | 26  |
| 2.4 | Interelectronic Interaction in Condensed Systems and Superconductivity                                                    | 54  |
| 2.5 | Conclusion                                                                                                                | 64  |
|     | References                                                                                                                | 66  |
| 3   | Magnetic Superconductors. <i>L. N. Bulaevskii</i>                                                                         | 69  |
| 3.1 | Introduction                                                                                                              | 69  |
| 3.2 | Description of the Coexistence Phase of Ferromagnetic Superconductors by the Generalized Ginzburg-Landau Functional       | 83  |
| 3.3 | Quasiclassical Eilenberger Equations for Superconductivity in a Coexistence Phase and How to Solve Them                   | 86  |
| 3.4 | Magnetic Fluctuations Above $T_M$                                                                                         | 96  |
| 3.5 | Magnetic Structure of a Coexistence Phase and Phase Transitions                                                           | 99  |
| 3.6 | Superconducting Properties of a Coexistence Phase                                                                         | 102 |
| 3.7 | Effect of the Magnetic System's Disorder on the Coexistence Phase                                                         | 104 |
| 3.8 | Comparison Between Theoretical Predictions and Experimental Data for Ferromagnetic Superconductors                        | 107 |
| 3.9 | Antiferromagnetic Superconductors                                                                                         | 114 |
|     | References                                                                                                                | 122 |
| 4   | Thermoelectric Effect and Flux Quantization in Hollow Superconductors. <i>G. F. Zharkov</i>                               | 126 |
| 4.1 | Introduction                                                                                                              | 126 |
| 4.2 | Thermoelectric Effect in Superconductors                                                                                  | 128 |
| 4.3 | A Hollow Cylinder in an External Magnetic Field                                                                           | 148 |

A Hollow Cylinder with a Solenoid Inside a Cavity 161

Concluding Remarks 171

References 171

**Magnetic State with Orbital Toroidal Ordering and Superdiamagnetism.** *A. A. Gorbatsevich and Yu. V. Kopayev* 175

Introduction 175

Toroidal Order Parameter 176

Magnetic Susceptibility Above the TS Transition Temperature 187

Magnetic Susceptibility of a Macroscopically Inhomogeneous TC State 198

Phenomenological Models of Diamagnetism in a TC State 216

Concluding Remarks and Discussion of Experimental Situation 229

Appendix 237
