Patterns of Structure and Function

Preface

xiv

1. STRUCTURE AND FUNCTION OF CELLS

1

The Cell. Where do cells come from?

The Tools of Study. Improvements in the light microscope—Electron microscopes

Cell Structures. The nucleus—Endoplasmic reticulum and ribosomes
The Golgi apparatus—Lysosomes—Mitochondria—Chloroplasts
and plastids—Microtubules—Centrosomes—Cilia and flagella
Vacuoles—Cell walls—Cell membranes—Who's in charge here?

Tissues, Organs, and Systems

Summary

Review questions

The Ostrich

16

New X-ray System Gives Three-Dimensional Views

21

2. CHEMICALS OF LIFE

25

Units of Matter. Atomic structure—Electron shells—Combinations of atoms

Chemical Bonds. Ionic bonds: the give-and-take bonds—Ionic compounds ionize—Acids and bases: the pH scale—Covalent bonds: the sharing bonds—Hydrogen bonds

Water: Solvent of Life. Structure of water—Solvent properties

Organic and Inorganic Structures. Carbon and the structure of organic compounds—The organic uses of oxygen

Carbohydrates. Simple sugars—Disaccharides—Polysaccharides

Lipids. Fats—Phospholipids—Waxes—Steroids

Proteins. Amino acids—Amino acid chains and protein structure
Sickle-cell anemia: one wrong amino acid—Enzymes

Nucleic Acids

Summary

Review questions

Hyperkinesis and Food Additives

33

The Mosquito

38

Patterns of Maintenance and Regulation

3. ENERGY AND ORGANISMS

47

ATP: Energy Currency of the Cell. How is ATP made?

Energy Reactions in the Cell. Enzymes and catalysis—Oxidation-reduction reactions

Photosynthesis. Chlorophyll: the light-sensitive pigment—The light reactions: photophosphorylation—The dark reactions: carbohydrate synthesis

Cellular Respiration. Anaerobic respiration—The role of NAD and NADH
Aerobic respiration—The Krebs cycle—Summing up cellular respiration

Summary

Review questions

And Now, an Artificial Leaf

50

The Mandrake

56

4. PATTERNS OF DIGESTION

65

Nutrition Needs in Digestion

Digestion Involves Specialization. Extracellular digestion—Intracellular digestion—The beginnings of specialization—Gastrovascular digestion—The complete digestive tract

The Human Digestive System. Nervous and hormonal regulation

Digestion in Plants

Summary

Review questions

Too Much of a Good Thing?

75

Pitcher Plants

78

5. TRANSPORT IN PLANTS AND ANIMALS

85

Cellular Basis of Transport. Diffusion and osmosis—Osmotic pressure
Flow and active transport

Animal Transport Systems. Transport in simple animals—Transport in complex animals

Circulatory Systems. Open circulatory systems—Closed circulatory systems

The Human Circulatory System. Composition of the blood—The heart and circulation—The lymphatic system

Transport in Vascular Plants. Water absorption—Structure of woody stems—Translocation—The cohesion theory

Summary	
Review questions	
The Elephant	94
Heading Off a Heart Attack	100
6. GAS EXCHANGE SYSTEMS	111
Gas Exchange in Animals. Gas exchange in structurally simple organisms	
Gas exchange in structurally complex animals	
The Human Respiratory System. Breathing	
Gas Exchange in Vascular Plants	
Summary	
Review questions	
Walking Catfish	116
The Deadly Sniff	120
7. SUPPORT AND LOCOMOTION SYSTEMS	129
Types of Skeleton. The exoskeleton—The endoskeleton	
The Structure of the Skeleton. The joints	
The Muscles. Types of muscle	
Skeletal Muscle Contraction	
Summary	
Review questions	
The Well-Dressed Astronaut	132
Giraffes	140
8. STABILITY OF THE ORGANISM	147
Internal Temperature Regulation. Ectotherms—Endotherms	
Regulation of Fluid Balance	
Waste Removal. The kidneys—The liver	
The Repair of Damage. Temporary repair—Permanent repair	
Defenses Against Disease. Phagocytes: the first line of defense	
Antibodies: the second line of defense—The thymus gland—The development of immunity	
Summary	
Review questions	
Sea Lions	158
Antibiotics: Miracle Drugs or Killer Drugs?	162

Patterns of Reproduction and Development

9. HORMONAL REGULATION

167

Hormones in Animals. The discovery of hormonal action

Hormonal Regulation in Humans. The hypothalamus—The pituitary gland—The adrenal glands—The thyroid gland—The parathyroid glands—The pancreas—Other endocrine glands—The prostaglandins

Hormonal Regulation in Invertebrates. Insect metamorphosis—Hormones and metamorphosis

Hormonal Regulation in Plants. Auxin—Synthetic auxins—Apical dominance—Other plant hormones—Photoperiodism

Summary

Review questions

Beyond the Pill

176

The Monarch Butterfly

180

10. NERVOUS SYSTEM REGULATION

189

Neurons: The Basic Unit. The structure of neurons—The nerve impulse

Nerve Pathways. Simple and complex reflex arcs

Nervous Systems in Invertebrates. The cnidarian nervous system—Development of central control—More complex mechanisms of control

Nervous Systems in Vertebrates. The central and peripheral nervous systems—The autonomic nervous system

The Brain. The human brain—The hindbrain—The midbrain—The forebrain—Brain waves

Summary

Review questions

Tickle Your Brain to Stop Pain?

194

The Octopus

200

11. ORIGIN AND REPRODUCTION OF LIFE

211

The Properties of Life

The Origin of Life. The theory of biogenesis—The theory of abiogenesis
The Oparin hypothesis—Molecules become living cells

Cellular Reproduction. Mitosis—Asexual reproduction—Sexual reproduction—Meiosis

Summary

Review questions

Aphids

214

Bacterial Test for Dangerous Chemicals

222

Patterns of Change

15. HEREDITY AND NEW INDIVIDUALS

297

The Investigations of Gregor Mendel. Mendel's experiments—Mendel's analysis; the principle of segregation—Testing the hypothesis: the testcross—Dihybrid cross; principle of independent assortment
After Mendel

Genes and the Chromosome Theory. Experiments with *Drosophila*—Linkage—Sex chromosomes—Crossing-over—Incomplete dominance—Multiple alleles—Changes in chromosomes

Human Genetics. Human blood groups—The Rh factor—Sex-linked genes in humans—The gene pool

Summary

Review questions

The Marijuana Muddle

310

The Armadillo

314

16. MASTER MOLECULES

325

The Discovery of DNA

Structures of Heredity. The genetic code—Protein synthesis

Regulation of Gene Action. Inherited and environmental factors

Genetic Engineering

Summary

Review questions

Snowflake, the Albino Gorilla

336

Putting DNA on the Assembly Line

339

17. GENETIC VARIATION IN POPULATIONS

345

Some Terms and Concepts. The Hardy-Weinberg principle

Sources of Variation. Mutation—Migration—Recombination

Influences on recombination

Preservation of Genes in a Population

Summary

Review questions

Eating Up the Oil Spills

349

Snow Geese/Blue Geese

352

Patterns of Change

15. HEREDITY AND NEW INDIVIDUALS

297

The Investigations of Gregor Mendel. Mendel's experiments—Mendel's analysis; the principle of segregation—Testing the hypothesis: the testcross—Dihybrid cross; principle of independent assortment
After Mendel

Genes and the Chromosome Theory. Experiments with *Drosophila*—Linkage—Sex chromosomes—Crossing-over—Incomplete dominance—Multiple alleles—Changes in chromosomes

Human Genetics. Human blood groups—The Rh factor—Sex-linked genes in humans—The gene pool

Summary

Review questions

The Marijuana Muddle

310

The Armadillo

314

16. MASTER MOLECULES

325

The Discovery of DNA

Structures of Heredity. The genetic code—Protein synthesis

Regulation of Gene Action. Inherited and environmental factors

Genetic Engineering

Summary

Review questions

Snowflake, the Albino Gorilla

336

Putting DNA on the Assembly Line

339

17. GENETIC VARIATION IN POPULATIONS

345

Some Terms and Concepts. The Hardy-Weinberg principle

Sources of Variation. Mutation—Migration—Recombination

Influences on recombination

Preservation of Genes in a Population

Summary

Review questions

Eating Up the Oil Spills

349

Snow Geese/Blue Geese

352

18. EVOLUTION: THE THEORY OF NATURAL SELECTION 359

Evidence for Evolution. Industrial melanism—Chemical resistance
Support from other research

The History of Evolutionary Theory. Geological change—Biological change

Darwin and the Beagle

Natural Selection. Acceptance of Darwin's theory

Adaptation and Selection

Summary

Review questions

Updating the Dinosaur 368

The Wild Mustang 372

19. ORIGIN OF SPECIES 381

What is a Species?

Geographical Isolation: Finches on Cocos Island

Isolating Mechanisms: Finches on the Galápagos Islands. Isolating mechanisms and environmental niches—Isolation by postmating mechanisms—Polyploidy

Allopatric and Sympatric Speciation

Subspecies, Races, Breeds

Summary

Review questions

Messages from Old Bones 388

The Sperm Whale 390

20. ORDER OUT OF CHAOS 399

Principles of Classification. How many kingdoms?

Monera

Protista. Plant-like protists—Animal-like protists

Fungi. Myxomycophyta—Lichens

Plantae. Thallophyta—Embryophyta—Bryophyta—Tracheophyta
Psilophyta, Lycopsida, Arthropoda—Pterophyta—Gymnospermae—Angiospermae

Animalia. Porifera—Cnidaria—Platyhelminthes—Nematoda

Annelida—Mollusca—Arthropoda—Echinodermata—Chordata

Summary

Review questions

Interacting with the Environment

Fungus-Growing Ants

406

Is Diabetes Triggered by a Virus?

414

21. RECEIVING AND COMMUNICATING INFORMATION 427

Sensory Reception. Mechanical receptors—The sense of touch—Monitoring the body—The reception of sound—The sense of balance
Chemical receptors—Visual receptors—Simple and compound eyes—The camera eye

The Sending of Messages. Chemical messages—Sending messages by sound—Echolocation—Visual messages—The dance of the honeybee—Still more messages

Summary

Review questions

The Kangaroo Rat

434

Chemical Seducers in Human Females?

448

22. Animal Behavior 455

What is Behavior? Taxis, kinesis, reflex—Biorhythms: circadian, lunar, annual

Species-Typical Behavior: Innate and Learned. Homing and migration

Learning: The Modification of Behavior Patterns. Habituation—Classical conditioning—Trial-and-error Learning—Problem-solving behavior—The role of play in learning—Imprinting: a special form of early learning

Social Behavior. Reproductive behavior: sticklebacks and penguins
Year-round societies: bees, wolves, and primates

Summary

Review questions

Chatting with Chimps

461

The Black Bear

468

23. THE WEB OF LIFE

479

Patterns of Interdependence. Patterns of nutrition—Patterns of protection—Patterns of reproductive interdependence

Ecological Interactions. Symbiosis—Predation—Competition

The Nature of the Ecosystem. Ecological succession—Biomes

Summary
