

Contents

1. Evolutionary Biology	1
2. Species Concepts and Their Application	10
3. Morphological Species Characters and Sibling Species	21
4. Biological Properties of Species	37
5. Isolating Mechanisms	55
6. The Breakdown of Isolating Mechanisms (Hybridization)	69
7. The Population, Its Variation and Genetics	82
8. Factors Reducing the Genetic Variation of Populations	106
9. Storage and Protection of Genetic Variation	129
10. The Unity of the Genotype	162
11. Geographic Variation	186
12. The Polytypic Species of the Taxonomist	205
13. The Population Structure of Species	214
14. Kinds of Species	235
15. Multiplication of Species	247
16. Geographic Speciation	278
17. The Genetics of Speciation	296
18. The Ecology of Speciation	331
19. Species and Transpecific Evolution	351
20. Man as a Biological Species	375
Glossary	413
Bibliography	427
