

# *Contents*

*Preface* xi

*Acknowledgments* xiii

## CHAPTER ONE

*The Meaning of Physiology* 1

Why Animal Physiology? / 2; Physiology and Medicine / 2; Physiology and the Human Experience / 2; Central Themes in Physiology / 3; Summary / 7

## CHAPTER TWO

*Physical and Chemical Concepts* 9

Atoms, Bonds, and Molecules / 11; The Fitness of H, O, N, and C for Life / 13; Water / 14; Water as a Solvent / 15; Solutions of Electrolytes / 18; Solutions and their Colligative Properties / 21; Electric Current in Aqueous Solutions / 25; Ion Selectivity / 28; Biological Molecules / 32; Summary / 43

## CHAPTER THREE

### *Enzymes and Energetics* 46

Energy: Concepts and Definitions / 47; Chemical Energy Transfer by Coupled Reactions / 49; ATP and the High-energy Phosphate Group / 51; Temperature and Reaction Rates / 53; Enzymes / 55; Metabolic Regulatory Mechanisms / 62; Metabolic Production of ATP / 64; Oxidation, Phosphorylation, and Energy Transfer / 66; The Electron Transport Chain / 68; Glycolysis / 70; Tricarboxylic Acid (Krebs) Cycle / 73; Efficiency of Energy Metabolism / 75; Oxygen Debt / 75; Summary / 76

## CHAPTER FOUR

### *Permeability and Transport* 79

Evidence for the Existence of Membranes / 80; Molecular Components of Membranes / 81; Membrane Structure / 83; Membrane Transport / 88; Mechanisms of Permeation / 89; Transport Energized by the Concentration Gradient of Another Substance / 96; Membrane Selectivity / 97; Osmotic Regulation by the Cell Membrane / 98; Pinocytosis and Exocytosis / 101; Membrane Regulation of Metabolic Activity / 103; Cell-Cell Membrane Junctions / 105; Summary / 108

## CHAPTER FIVE

### *Ions and Impulses* 111

Methods of Electrical Stimulation and Recording / 112; Passive Membrane Properties and Electrotonic Potentials / 114; Effect of Cell Geometry / 118; Equilibrium Potentials / 120; Charge Separation by Membranes / 122; The Resting Potential / 123; Permeability-controlled Changes in Membrane Potential / 125; Action Potentials / 126; Ionic Basis of Action Potentials / 128; The Sodium Channel / 133; The Regenerative Nature of Electrical Excitation / 133; Delayed Outward Potassium Current / 136; The Action Potential Summarized in Terms of Ionic Mechanisms / 137; Changes in Ion Concentration During Excitation / 138; Internal Perfusion Experiments / 138; Action Potentials Generated by Ions other than Sodium / 138; Calcium and Membrane Excitability / 140; Summary / 143

## CHAPTER SIX

### *Nerve Cells and Signals* 148

Neural Organization / 148; Evolution of Nervous Systems / 152; The Vertebrate Nervous System / 154; Propagation of Nerve Impulses / 159; Concept of the Synapse / 166; Transmission at Electrical Synapses / 166; Transmission at Chemical Synapses / 168; Postsynaptic Receptors and Channels / 176; Transmitter Substances / 178; Release of Transmitter / 181; Modification of Synaptic Function by Past Activity / 186; Summary / 189

## CHAPTER SEVEN

### *Receptors and Responses* 193

General Principles of Sensory Processing / 194; Chemoreception / 203; Mechanoreception / 207; The Mammalian Ear / 212; Electroreceptors / 216; Thermoreceptors / 217; Photoreceptors / 218; Visual Pigments / 225; Optic Mechanisms / 230; Summary / 234

## CHAPTER EIGHT

### *Integration and Behavior* 239

Some Generalizations / 239; Integrative Properties of Single Nerve Cells / 241; Basic Neural Circuits / 245; Sensory Filter Networks / 247; Neuromotor Networks / 258; Programmed Behavior / 266; Animal Orientation / 267; Behavior in Animals Without Nervous Systems / 269; Genetics and Instinctive Behavior / 272; Summary / 275

## CHAPTER NINE

### *Muscle and Movement* 279

Structural Basis of Contraction / 280; Sliding-Filament Theory of Muscle Contraction / 284; Cross-Bridge Function and the Production of Force / 286; Role of Calcium in Contraction / 289; Electromechanical Coupling / 291; Mechanical Properties of Contracting Muscle / 298; Neural Control of Muscle Contraction / 305; Cardiac Muscle / 310; Smooth Muscle / 312; Musculo-skeletal Systems / 312; Summary / 314

## CHAPTER TEN

### *Cilia and Flagella* 318

Function, Form, and Composition / 318; Mechanisms of Bending / 324; Coordination of Ciliary Movement / 328; Summary / 333

## CHAPTER ELEVEN

### *Chemical Messengers* 335

Chemical Regulation / 335; Hormones as Messengers / 336; Classification of Hormones / 338; Regulation of Hormone Secretion / 340; Neuroendocrine Relations / 344; The Vertebrate Endocrine System / 346; Hypothalamus and Pituitary / 347; Metabolic and Developmental Hormones / 349; Hormonal Regulation of Electrolyte Balance / 360; Gastrointestinal Hormones / 362; The Sex Hormones / 365; Invertebrate Endocrine Systems / 372; Mechanisms of Hormone Action / 376; Hormone Action on Genetic Mechanisms / 386; Summary / 388

## CHAPTER TWELVE

### *Osmoregulation and Excretion* 392

General Considerations / 395; Epithelial Transport / 398; Osmoregulatory Organs / 405; The Vertebrate Kidney / 405; Vertebrate Osmoregulatory Organs other than the Kidney / 419; Invertebrate Osmoregulatory Organs / 423; Excretion of Nitrogenous Wastes / 426; Summary / 429

## CHAPTER THIRTEEN *by David Randall*

### *Circulation of Blood* 433

The Mammalian Heart / 436; Electrical Activity of the Heart / 437; Mechanical Properties of the Heart / 440; The Pericardium / 443; Functional Morphology of the Vertebrate Heart / 445; Hemodynamics / 448; The Arterial System / 452; The Venous System / 455; Lymphatic System / 458; Regulation of Capillary Blood Flow / 459; Cardiovascular Control by the Central Nervous System / 461; Cardiovascular Responses to Exercise and Diving / 464; Summary / 466

## CHAPTER FOURTEEN *by David Randall*

### *Exchange of Gases* 469

Oxygen and Carbon Dioxide in Blood / 470; Oxygen and Carbon Dioxide Movement Between Compartments / 479; Movement of Oxygen and Carbon Dioxide Between Gaseous and Liquid Compartments / 480; Gas Exchange Across Capillary Walls / 496; Regulation of Gas Transfer and Respiration / 501; Neural Regulation of Breathing / 503; Summary / 507

*Appendixes* / 511

*Glossary* / 519

*Index* / 541
