

Contents

1	Segregation, Independent Assortment, and Probability	1
2	Mitosis and Meiosis	14
3	Dominance and Lethality	26
4	Multiple Alleles	33
5	Epistasis	42
6	Sex-Linkage and Nondisjunction	59
7	Eukaryotic Gene Mapping	75
8	Chromosomal Aberrations	89
9	Metabolic Pathways	102
10	Quantitative Inheritance	109
11	Hardy-Weinberg Equilibrium	120
12	Evolution	131
13	Speciation	140
14	Prokaryotic Gene Mapping	148
15	Gene Structure and Organization	160
16	DNA Replication and Recombination	174
17	Transcription, RNA Molecules, and RNA Processing	186
18	The Genetic Code and Translation	197
19	Recombinant DNA Technology and Manipulation of DNA	206
20	Prokaryotic Gene Regulation	223
21	Eukaryotic Gene Regulation	232
22	Mutation	244
23	Extranuclear Genetics	255
24	Transposable Genetic Elements and Cancer	265
