Introduction	1
Basic Concepts	1
The Scope of Receptorology	2
Specificity of Receptors	3
Dynamic Aspects of Receptor Function	4
The Time Scales of Receptor Function	5
The Interaction of Receptors with Their Intracellular Environment	5
Summary	6
 1. Techniques of Ligand Binding to Receptors	 7
1.1 Measurement of Binding	7
1.2 Assay of Membrane Receptors	8
a. Filtration, 8 / b. Centrifugation, 9 / c. Equilibrium and Flow Dialysis, 9 / d. Assay of Solubilized Receptors, 11 / e. "Nonspecific" Binding, 12	
1.3 Type of Radioactive Ligands	12
1.4 Chemical Properties of Ligands	14
1.5 The Choice of Radioisotopes	15
1.6 Kinetics of Ligand Binding	16
1.7 The Effect of Temperature on Ligand Binding	17

2. Analysis of Binding Data	19
2.1 Simple Noncooperative Binding	19
a. The Direct Plot, 19 / b. The Semilogarithmic Plot, 19 / c. The Scatchard Plot, 21 / d. The Double Reciprocal Plot, 22 / e. The Hill Plot, 22	
2.2 Displacement Experiments	23
2.3 The Schild Plot	26
2.4 Non-Michaelian Ligand Binding	27
2.5 Distinguishing Negative Cooperativity from Heterogeneous Population of Sites	29
a. Equilibrium Methods, 29 / b. The Kinetic Approach, 31	
3. The Interaction of the Receptor with the Effector System	37
3.1 General Considerations	37
3.2 Receptor-Effector Coupling in Receptor-Dependent Adenylate Cyclases: Quantitative Considerations	38
a. General, 38 / b. Models for the Mode of Receptor-to-Effector Coupling: The Binary System, 39	
3.3 General Comments	57
a. Modeling of the Adenylate Cyclase System as a Binary System, 57 / b. Binding Experiments, 59 / c. Kinetics of Adenylate Cyclase Activation, 59 / d. The Kinetic Pattern as a Function of Receptor Concentration, 59	
3.4 Models for the Mode of Receptor-to-Effector Coupling: The Ternary System	60
a. General, 60 / b. Model 1: N Precoupled to C, 61 / c. Model 2: R to NC Coupling with NC Dissociation, 63 / d. Model 3: The N Shuttle Ternary Complex Activation Model, 64 / e. Model 4: The Restricted Ternary "N Shuttle" Model, 66 / f. Model 5: The Binary Complex "N Shuttle" Model ("Pure Shuttle"), 67 / g. General Conclusions, 69	
3.5 Receptors Coupled to Ion Gating	72
a. General Remarks, 72 / b. Modeling of the nAChR, 73 / c. The Origin of Cooperativity in nAChR Action: General Considerations, 73 / d. Direct Experiments, 75 / e. Binding and Response, 78	
3.6 Other Examples of Positive Cooperativity	80
3.7 Negative Cooperativity in the Response of the Effector: General Features and Possible Physiological Significance	81

4. Desensitization: Molecular Aspects	83
4.1 General Considerations	83
4.2 Adenylate Cyclase System	84
a. <i>The Basic Phenomenology</i> , 84 / b. <i>Minimal Molecular Model</i> , 86 / c. <i>Desensitization to Adenylate Cyclase Inhibition</i> , 88	
4.3 Receptors Linked to Ion Channels: The Nicotinic Receptor	89
5. Receptor Occupancy and "Spare Receptors"	91
5.1 General Considerations	91
5.2 Quantitative Considerations	92
5.3 Physiological Significance	96
5.4 The True Apparent Dissociation Constant for a Partial Agonist in a "Spare Receptor" Situation	99
6. Partial Agonism	103
6.1 Development of the Concept of Partial Agonism	103
6.2 Partial Agonism	104
6.3 Molecular Models for Partial Agonism	105
a. <i>β-Receptor-dependent Adenylate Cyclase</i> , 106 / b. <i>The Nicotinic Acetylcholine Receptor</i> , 108	
6.4 Delineating Characteristic Parameters for Partial Agonists	109
6.5 Concluding Remarks	109
7. Solubilization, Purification, and Reconstitution of Membrane Receptors	111
7.1 General Considerations	111
7.2 Reconstitution As a Vectorial Process	111
7.3 The Chance of Reconstitution	113
7.4 The Density of Receptors	114
7.5 Vesicles Versus Sheets	115
7.6 Solubilization and Purification: Principles	115
7.7 The Choice of Detergent	117
7.8 Techniques for Reconstitution and Detergent Removal: Principles	118
a. <i>Dilution</i> , 118 / b. <i>Dialysis</i> , 118 / c. <i>Gel Filtration</i> , 118 / d. <i>Sucrose Gradient Ultracentrifugation</i> , 119 / e. <i>Active Removal of Detergent Using Bio-beads</i> , 119 / f. <i>Combinations</i> , 119	
7.9 Detergent Exchange Prior to Reconstitution	119
7.10 Some Specific Examples	120
a. <i>The Nicotinic Acetylcholine Receptor</i> , 120 / b. <i>The β-Adrenergic Receptor</i> , 121	

xii Contents

Appendixes	125
A. Nonlinear Scatchard Plots	127
B. Cooperative Response Coupled to Noncooperative Binding	129
C. Parameters for the Action of Partial Agonists	131
