

Contents

Preface.....	vii
Chapter 1 Structure and Function— <i>How the Architecture of the Lung Subserves its Function</i>	1
Chapter 2 Ventilation— <i>How Gas Gets to the Alveoli</i>	13
Chapter 3 Diffusion— <i>How Gas Gets Across the Blood-Gas Barrier</i>	25
Chapter 4 Blood Flow and Metabolism— <i>How the Pulmonary Circulation Removes Gas from the Lung and Alters Some Metabolites</i> ..	35
Chapter 5 Ventilation-Perfusion Relationships— <i>How Matching of Gas and Blood Determines Gas Exchange</i>	55
Chapter 6 Gas Transport by the Blood— <i>How Gases are Moved to the Peripheral Tissues</i>	75
Chapter 7 Mechanics of Breathing— <i>How the Lung is Supported and Moved</i>	93
Chapter 8 Control of Ventilation— <i>How Gas Exchange is Regulated</i>	121
Chapter 9 Respiratory System Under Stress— <i>How Gas Exchange Is Accomplished During Exercise, at Low and High Pressures, and at Birth</i>	137
Chapter 10 Tests of Pulmonary Function— <i>How Respiratory Physiology Is Applied to Measure Lung Function</i>	153
Appendix A—Symbols, Units, Equations	167
Appendix B—Answers	173
Appendix C—Further Reading	175
Figure Credits	179
Index	181
