Credits xiii

Preface xvii

1 Neurons: Building Blocks of the Brain 1

Brain Cell Morphology 2

Electric Signaling By Neurons 10

How neurons rest by working 12

The resting potential 13

The action potential, or nerve impulse 14

The regenerative cycle: the importance of the Na^+ ion in initiating the action potential 15

Positive feedback in the regenerative cycle 18

Recovery: the importance of the K^+ ion in restoring the resting potential 19

Refractory periods and the frequency code 21

The all-or-none law 22

Propagation of the action potential 23

Transmission at Synapses 25

Postsynaptic potentials 29

Ions responsible for an epsp 30

Ions responsible for an ipsp 30

Synaptic integration 31

Variety of chemical transmitters 32

Suggestions For Further Reading 33

2 Structural Organization of the Mammalian Brain 34*The Peripheral Nervous System 35*

On old Olympus' towering tops: the cranial nerves 35

The spinal nerves 37

The Autonomic nervous system 38

Sympathetic activity 42

The Central Nervous System 45

Portrait of the brain as a young tube 46

*Suggestions For Further Reading 53***3 Vision 54***Biological Transduction 54**Transduction In The Vertebrate Eye: Visual Chemistry 56**What The Eye Tells The Brain 60**The Duplicity Theory of Vision 64**Wiretapping In The LGN 66*

Response characteristics of LGN neurons 68

Place coding by LGN neurons 69

Color coding by LGN neurons 69

Simultaneous coding for place and color 71

The Visual Cortex And Beyond 74

Binocularity 77

The Klüver-Bucy Syndrome 80

A monkey's paw in the monkey brain? 82

*Suggestions For Further Reading 83***4 Audition, Somesthesia, and the Chemical Senses 84***Audition 84**The Vestibular System 92**Somesthesia 96**Olfaction 99**Taste 101**Suggestions For Further Reading 103***5 Hormones, Sexuality, and Behavior 104***Seven Variables of Sex 105**The Effect of Hormones On Development 110*

The androgen-insensitivity syndrome	112
Female pseudohermaphroditism	114
The Oregon studies	117
Sexual behavior	122
<i>The Activating Effect of Hormones</i>	125
The source of cyclicity in the female brain	130
Ovulation as a reflex	134
The other pituitary	138
The milk-ejection reflex	139
How do hormones work on neurons?	142
<i>Suggestions For Further Reading</i>	144

6 The Regulation of Food and Water Consumption 145

<i>If Food Tastes So Good, Why Do We Stop Eating?</i>	146
The "Siamese twins" approach	147
The glucostatic theory of short-term regulation	148
The lipostatic theory of long-term weight regulation	150
Parabiotic rats and VMH lesions	151
The role of the hypothalamus in food intake regulation	152
Rats who won't eat: the LH syndrome	153
Human obesity	156
<i>Thirst And The Double-Depletion Hypothesis</i>	157
Cellular dehydration	159
Hypovolemia	160
What stops drinking?	160
<i>Suggestions For Further Reading</i>	161

7 Our Changing Brains 162

<i>How Does One Grow A Brain?</i>	163
Cell division	163
Cell migration	166
Cell specification	166
The specificity theory of Sperry	167
Signs in the skin	169
Cell death	171
Cell aging	172
<i>Neural Plasticity In The Adult Mammalian Brain</i>	174
<i>Learning: A Change In Brain Function</i>	177
Habituation: a primitive kind of learning?	178
The dogs of Pavlov	179
From pigeons in a box to Utopia?	182

What, then, is the question?	182
Learning at the single-neuron level	184
Does learning change the metabolic machinery of brain cells?	184
Are unique brain proteins produced during learning?	186
Organizational questions about learning	187
Learning in the isolated thoracic ganglia of insects	188
Two or more memory processes	190
The hippocampus and memory in the human brain	191
The effect of hippocampal lesions in experimental animals	193
What can we teach our hearts?	194
Karl Lashley's search for the engram	197
Mass action?	197

Suggestions For Further Reading 202

8 The Human Nervous System: Two Brains in One 204

Asymmetry Of The Human Brain 204

Split brains and split consciousness	208
Electrical stimulation of the conscious human brain	214
Language	218
Some anatomical aspects of the cortex	221

Suggestions For Further Reading 226

9 The Neural Basis of Movement and Posture 227

The Final Common Path 227

Reciprocal Inhibition 229

Synergism Of Reflexes 229

Gamma Motoneurons And Feedforward 231

Reflexes As Silent Slaves 233

Tension Control 233

Higher Motor Regions Of The Brain 234

 The cerebellum 236

 The comet, the globe, and the peach stone 238

Another "Little Person" In The Brain 239

What Initiates Movements? 240

Suggestions For Further Reading 241

10 Sleep, Dreaming, And Other Altered States of Consciousness 242

Sleep And Dreaming 243

The brainstem reticular formation 244

Paradoxical sleep and the rapid eye movements of dreaming 247

The neurons of the "seam" and the "blue place" 247

A Fourth State of Consciousness? 250

Altered Consciousness Through Chemistry 251

Hofmann's trip 251

Biogenic amines, mood, and mania 253

Mood elevators, or antidepressants 254

Amphetamines 255

Biogenic amines and schizophrenia 256

Suggestions For Further Reading 257

Glossary 258
