Foreword, ix

Tim Hunt

Preface, xi

Jan A. Witkowski

OVERVIEW

The General Idea, xiii

Tim Hunt

BIOCHEMICAL ERA

Albrecht Kossel, 1

S. Rapoport

Albrecht Kossel and the Discovery of Histones, 3

Detlef Doenecke and Peter Karlson

Early Nucleic Acid Chemistry, 9

Fritz Schlenk

P.A. Levene and 2-Deoxy-D-ribose, 17

Joseph S. Fruton

ORIGINS OF MOLECULAR BIOLOGY

Schrödinger's *What is Life?*: A 50-Year Reflection, 21

G. Rickey Welch

Schrödinger's *What is Life?*: Entropy, Order and Hereditary
Code-scripts, 31

J.A. Witkowski

Finally, the Beginnings of Molecular Biology, 39

Seymour S. Cohen

Biochemical Origins of Molecular Biology: A Discussion, 45

Robert Olby

THE DOUBLE HELIX

The Biological Role of Nucleic Acids, 51

Peter Karlson

Did a Tragic Accident Delay the Discovery of the Double Helical Structure of DNA?, 57

Keith L. Manchester

The Double Helix and All That, 67

H.R. Wilson

Light on a Dark Lady, 77

Anne Piper

REPLICATION

The DNA Replication Problem, 1953–1958, 89

Frederic L. Holmes

Tritium-labeled Thymidine and Early Insights into DNA Replication and Chromosome Structure, 101

J. Herbert Taylor

DNA Replication: The 30th Anniversary of the Bacterial Model and the "Baby Machine", 109

Stephen Cooper

DNA MOLECULES

DNA Strand Separation, Renaturation and Hybridization, 119

Julius Marmur

Blotting at 25, 129

Ed M. Southern

One Chromosome: One DNA Molecule, 139

Bruno H. Zimm

Through the Looking Glass: The Discovery of Supercoiled DNA, 147

Jacob Lebowitz

DNA, RNA, AND PROTEIN SYNTHESIS

Protein Synthesis

Ernest F. Gale and Protein Synthesis: The Difficulties of Analysing a Complex System, 161

Hans-Jörg Rheinberger

Reminiscences about Nucleic Acid Cytochemistry and Biochemistry, 171

Jean Brachet

Jean Brachet's Alternative Scheme for Protein Synthesis, 179

Denis Thieffry and Richard M. Burian

Genetic Code

Deciphering the Genetic Code—A Personal Account, 189

Marshall Nirenberg

The History of Deciphering the Genetic Code: Setting the Record Straight, 209

Akira Kaji and Hideko Kaji

tRNA

Biochemistry or Molecular Biology? The Discovery of "Soluble RNA", 213

Mahlon Hoagland

Back to Camelot: Defining the Specific Role of tRNA in Protein Synthesis, 221

Bernard Weisblum

The Crystallization and Structural Determination of tRNA, 231

Brian F.C. Clark

mRNA

What Was the Message?, 243

Elliot Volkin

An RNA Heresy in the Fifties, 253

Henry Harris

The Discovery of "Giant" RNA and RNA Processing: 40 Years of Enigma, 261
Klaus Scherrer

The Discovery of "Split" Genes: A Scientific Revolution, 275
J.A. Witkowski

Molecular Basis of Protein Synthesis

The *In Vitro* Biosynthesis of an Authentic Protein, 287
Norton D. Zinder

Early Days of Ribosome Research, 295
Masayasu Nomura

The Discovery of Polyribosomes, 305
Jonathan R. Warner and Paul M. Knopf

Peptidyl Transfer, the Monro Era, 317
B. Edward H. Maden

Central Dogma

Forty Years under the Central Dogma, 331
Denis Thieffry and Sahotra Sarkar

SEQUENCING

Protein Sequencing and the Making of Molecular Genetics, 345
Soraya de Chadarevian

pBR322 and the Advent of Rapid DNA Sequencing, 355
J. Gregor Sutcliffe

BIOCHEMISTRY AND MOLECULAR BIOLOGY

Biochemistry Strikes Back, 367
Sydney Brenner

Further Reading, 371

Index, 375
