|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|------------|
|                   | <i>Preface</i>                                                                                                                                      | v          |
|                   | <i>Contributors</i>                                                                                                                                 | vii        |
| <b>Chapter 1</b>  | <b>Introduction to Integrative Neuroscience</b><br><i>R.R. Poznanski</i>                                                                            | <b>1</b>   |
| <b>Chapter 2</b>  | <b>A Biophysical Perspective on Neural Information Processing</b><br><i>K.N. Leibovic</i>                                                           | <b>23</b>  |
| <b>Chapter 3</b>  | <b>Morphofunctional Roles of Simulated Neurons in Volume Transmission</b><br><i>L. da F. Costa, L.G. Rios-Filho, J.S. Tanaka, and E.T.M. Manoel</i> | <b>43</b>  |
| <b>Chapter 4</b>  | <b>Biophysical Model of Retinal Horizontal Cells</b><br><i>Y. Hayashida and T. Yagi</i>                                                             | <b>75</b>  |
| <b>Chapter 5</b>  | <b>The Functional Role of N-Methyl-D-Aspartate Receptors in the Lateral Amygdala</b><br><i>H.T. Blair and J.E. LeDoux</i>                           | <b>95</b>  |
| <b>Chapter 6</b>  | <b>Hebbian Learning in a Network of Biochemical Neurons</b><br><i>M. Okamoto and K. Tanaka</i>                                                      | <b>123</b> |
| <b>Chapter 7</b>  | <b>A Physicochemical Basis of Synaptic Transmission in the Myenteric Plexus</b><br><i>R.N. Miftakhov and J. Christensen</i>                         | <b>147</b> |
| <b>Chapter 8</b>  | <b>Dendritic Spike-Like Potentials in a Neural Network</b><br><i>R.R. Poznanski</i>                                                                 | <b>177</b> |
| <b>Chapter 9</b>  | <b>Mathematical Reduction Techniques for Modeling Biophysical Neural Networks</b><br><i>P.C. Bressloff and S. Coombes</i>                           | <b>215</b> |
| <b>Chapter 10</b> | <b>Nonlinear Dynamics of Small-Scale Biophysical Neural Networks</b><br><i>S. Doi and S. Kumagai</i>                                                | <b>261</b> |

|            |                                                                                                                        |     |
|------------|------------------------------------------------------------------------------------------------------------------------|-----|
| Chapter 11 | Comparison Between Spike and Rate Models in<br>Networks of Integrate-and-Fire Neurons<br><i>F. Chapeau-Blondeau</i>    | 303 |
| Chapter 12 | Neural Dynamics of Vocal Processing in the<br>Auditory Cortex<br><i>Y. Yamaguchi, J. Horikawa, and I. Taniguchi</i>    | 343 |
| Chapter 13 | Characterization of Post-Ontogenic<br>Functional Connectivity<br><i>R.J. MacGregor, F.G. Ascarunz, and M.A. Kisley</i> | 363 |
| Chapter 14 | Chaotic Dynamics of Field Potentials Simulated by a<br>Neural Mass Network<br><i>V.I. Sbitnev and N.B. Ampilova</i>    | 389 |
| Chapter 15 | Advanced Numerical Methods for Modeling Dendrites<br><i>K.A. Lindsay, J.M. Ogden, and J.R. Rosenberg</i>               | 411 |
|            | <i>Index</i>                                                                                                           | 495 |
