

Contents

Preface ix

CHAPTER 1 INTRODUCTION 1

1. Biological Roles of the Nucleic Acids 1
 2. Physical Chemistry and Nucleic Acid Function 2
 3. Outline of this Book 3
 4. Obtaining Nucleic Acids for Physical Chemical Study 6
 5. The Periodical Literature of Nucleic Acids 7
 6. Books and Monographs 8
 7. Computer Analysis of Sequences and Structures 10
- References 10

CHAPTER 2 BASES, NUCLEOSIDES, AND NUCLEOTIDES 13

1. Structures 13
 2. Electron Distributions 22
 3. Base Pairing and Base Stacking 31
- References 41

CHAPTER 3 CHEMICAL AND ENZYMATIC METHODS 45

1. Introduction 45
 2. Synthesis and Hydrolysis 46
 3. Determination of Sequence 52
 4. Determination of Secondary Structure 58
 5. Determination of Tertiary Structure 69
- References 72

CHAPTER 4 NUCLEIC ACID STRUCTURES FROM DIFFRACTION METHODS 79

1. Introduction 79
 2. Diffraction Methods 80
 3. General Features of Duplex DNA and RNA Structure 87
 4. Detailed Structure and Sequence Dependence of Double-Stranded DNA 93
 5. Double-Helical RNA Duplex 100
 6. DNA Helices with Imperfect Base Pairing 101
 7. Local Mobility of Double Helical Nucleic Acids 102
 8. Transfer RNA 103
- References 108

CHAPTER 5 STRUCTURE AND DYNAMICS BY NMR 111

1. Introduction to NMR Methods 112
 2. Systematic Assignment of Resonances 122
 3. Parameters for Structure Analysis 134
 4. Characterization of Structures 141
 5. Dynamic Analysis 146
 6. Examples of NMR Studies of Nucleic Acids 150
 7. Conclusions 158
- References 158

CHAPTER 6	ELECTRONIC AND VIBRATIONAL SPECTROSCOPY	165
	1. Electronic Absorption Spectra in the Ultraviolet	166
	2. Fluorescence and Phosphorescence	181
	3. Circular Dichroism	185
	4. Linear Dichroism	199
	5. Infrared Absorption and Raman Scattering	207
	References	217
CHAPTER 7	THEORETICAL METHODS	223
	1. Theoretical Foundations	223
	2. Simulation Methods	230
	3. Theoretical Rationale for Conformational Preferences of Nucleic Acid Components	239
	4. Sequence-Dependent Effects within Helices	242
	5. Mismatches, Damaged DNA, and DNA-Drug Interactions	249
	6. Concluding Perspectives	253
	References	254
CHAPTER 8	CONFORMATIONAL CHANGES	259
	1. Single-Strand Stacking	261
	2. Double Helix Formation by Oligonucleotides without Loops	271
	3. Double Helix Formation by Oligonucleotides with Loops	291
	4. Double Helix Formation with Polynucleotides	302
	5. Environmental Effects on Helix Stability	307
	6. Triple Helices	310
	7. G-Quartets	311
	8. Predicting Secondary Structure	312
	9. Predicting Three-Dimensional Structure	315
	10. Helix-Helix Transitions	317
	Appendix	317
	References	321
CHAPTER 9	SIZE AND SHAPE OF NUCLEIC ACIDS IN SOLUTION	335
	1. Characterization at the Macromolecular Level	336
	2. Models for Molecular Structure	337
	3. Frictional Coefficients for Model Shapes	341
	4. Electrophoresis	345
	5. Sedimentation Velocity	354
	6. Diffusion	360
	7. Sedimentation Equilibrium	364
	8. Viscosity	368
	9. Viscoelasticity	369
	10. Rotational Dynamics	372
	11. Scattering	381
	12. Dynamic Light Scattering	390
	13. Microscopy: Visualization of Single Molecules	396
	14. Bending and Twisting of DNA	407
	References	433
CHAPTER 10	SUPERCOILED DNA	443
	1. Introduction	443
	2. Topoisomerases and Gyrases	444
	3. Geometry and Topology of DNA Supercoiling	446
	4. Energetics of Twisting and Bending	463

5. Stress-Induced Reactions 466

References 470

CHAPTER 11 INTERACTION OF NUCLEIC ACIDS AND WATER AND IONS 475

1. Hydration 476

2. Polyelectrolyte Behavior 488

3. Hydration in Ionic Solutions 504

4. Specific Binding of Metal Ions and Polyamines 507

5. Mixed Aqueous-Nonaqueous Solvents 521

Appendix 522

References 528

CHAPTER 12 INTERACTION AND REACTION WITH DRUGS 535

1. Modes of Interaction: Intercalation and Groove Binding 536

2. Theoretical Description of Binding Equilibria 537

3. Experimental Studies of Binding Equilibria 547

4. Solution Studies of the Structure of Drug-DNA Complexes 565

5. Kinetics of Ligand Binding 571

6. Natural Products that React Covalently with DNA 575

7. Synthetic DNA Binding Agents 585

References 591

CHAPTER 13 PROTEIN-NUCLEIC ACID INTERACTIONS 597

1. Biological Role of Protein-Nucleic Acid Interactions 598

2. Elementary Energetics and Specificity of Interaction 601

3. DNA Sequence Motifs 615

4. Twisting and Bending of DNA Sequences in Protein Complexes 626

5. Looping of DNA Sequences 641

6. Structural Motifs in Sequence Specific DNA-Protein Interactions 645

7. Motifs in RNA-Protein Interactions 677

8. Structural Motifs in Enzymes that Act on Nucleic Acids 683

9. Solution Characterization of Binding Interactions 692

10. Kinetics and the Search Mechanism 704

References 711

CHAPTER 14 HIGHER ORDER STRUCTURE 725

1. DNA Condensation *in Vitro* 725

2. DNA Packaging in Bacteriophage and Bacteria 749

3. DNA Packaging in Eukaryotes 756

References 766

Index 775
