

CONTENTS

Introduction	5
1. Discovering Our Past Through DNA	10
"Living in the Past" by James Graff	11
"The Human Factor" by Nancy Shute	21
"True or False? Extinction Is Forever" by Luba Vangelova	27
2. Mutation, Adaptation, and Natural Selection	32
"Foresight in Genome Evolution" by Lynn Helena Caporale	33
"The Importance of Context in Genetics" by Frederik H. Nijhout	49
3. The Human Chromosome	67
"Why the Y Is So Weird" by Karin Jegalian and Bruce T. Lahn	68
"Centromeres" by Christine Mlot	80
4. What Can Our DNA (and Animal DNA) Tell Us About Ourselves?	89
"The Secret of Life" by Nancy Gibbs	90
"Metaphors and Dreams" by Tim Radford	97
"The Human Genome Project" by R. M. Gardiner	105
"Illuminating Behaviors" by Douglas Steinberg	119
"Bioinformatics—New Horizons, New Hopes" by Giridhar Rao	127

5. Genes and Disease	139
"Using SNP Analysis for a Clinical Look at Diseases"	
by Peter Gwynne	140
"Regenerative Medicine" by William A. Haseltine	147
"We Are What We Eat" <i>The Economist</i>	163
6. Modifying Nature with Genetics	171
"Food" by Jennifer Ackerman	172
"Improving Trout Through Genetics Research"	
by Sharon Durham	188
Web Sites	194
For Further Reading	195
Bibliography	196
Index	202
