Preface	xiii

1 Auxin as an intercellular signal	1
JIŘÍ FRIML AND JUSTYNA WIŚNIEWSKA	
1.1 Introduction	1
1.2 Auxin transport – known pathways	2
1.2.1 Polar auxin transport pathway	2
1.2.2 Chemiosmotic model	4
1.2.3 Multicomponent auxin efflux carrier system	5
1.3 Molecular components	6
1.3.1 Auxin influx – AUX1 proteins	7
1.3.2 Auxin efflux – PIN proteins	7
1.3.3 ABC transporters	9
1.4 Subcellular dynamics of auxin carriers	9
1.4.1 Constitutive recycling of PIN proteins	9
1.4.2 AEs and vesicle trafficking	11
1.4.3 GNOM and PIN dynamics	12
1.5 The role of auxin gradients in plant development	12
1.5.1 Monitoring of auxin distribution in planta	13
1.5.2 Embryonic axis formation	13
1.5.3 Postembryonic organ formation	15
1.5.4 Root meristem maintenance	16
1.5.5 Tropisms	17
1.5.6 Downstream of auxin gradients	18
1.5.7 Auxin as morphogen	21
1.6 Conclusions	21
Acknowledgements	22
References	22
2 Peptides as signals	27
YIJI XIA	
2.1 Introduction	27
2.2 Peptide signals in plants and their biological functions	28
2.2.1 Systemins mediate systemic and local wound responses	28
2.2.2 RALF regulates plant growth and development	31
2.2.3 ENOD40 regulates nodulation and cell proliferation	31

2.2.4	PSK (phytosulfokine) is a mitogenic factor	34
2.2.5	CLAVATA 3 (CLV3) regulates stem cell homeostasis	35
2.2.6	S-locus cysteine-rich proteins determine specificity of self-incompatibility in the Brassicaceae	38
2.3	Proteolytic processing of prohormones	40
2.4	Technologies for discovering new peptide signals	41
2.5	Concluding remarks	43
	References	44
3	RNA as a signalling molecule	49
	PATRICE DUNOYER AND OLIVIER VOINNET	
3.1	Intercellular movement of plant mRNAs	49
3.1.1	Cell-to-cell movement of plant mRNAs	49
3.1.1.1	Plant plasmodesmata	49
3.1.1.2	Cell-to-cell movement of a transcription factor with its mRNA	50
3.1.2	Long-distance transport of plant mRNAs	51
3.2	Intercellular movement of viroids	53
3.2.1	What are viroids?	53
3.2.2	Intercellular movement of viroids	54
3.2.2.1	Cell-to-cell movement of viroids	54
3.2.2.2	Long-distance movement of viroids	54
3.2.3	Cellular factors involved in viroid movement	55
3.2.3.1	Phloem Lectin 2	55
3.2.3.2	VirP1	55
3.3	Intercellular movement of RNA silencing	56
3.3.1	Mechanism of RNA silencing	56
3.3.1.1	Co-suppression in petunia	57
3.3.1.2	Double-stranded RNA: trigger molecule of RNA silencing	57
3.3.1.3	Short interfering (si)RNAs are the specificity determinants of RNA silencing	58
3.3.1.4	RNA-induced silencing complex RISC	59
3.3.1.5	Transitive RNA silencing	60
3.3.1.6	Biological functions of RNA silencing in plants	61
3.3.2	The discovery of systemic RNA silencing	61
3.3.3	Initiation of systemic RNA silencing	63
3.3.3.1	Spontaneous activation of systemic RNA silencing	63
3.3.3.2	Exogenously induced systemic silencing	64
3.3.4	Propagation of systemic RNA silencing	65
3.3.4.1	Long-distance movement of RNA silencing	65
3.3.4.2	Cell-to-cell movement of RNA silencing	67
3.3.5	Maintenance of systemic silencing	71
3.3.6	What is the nucleic acid component of the silencing signal?	72
3.3.6.1	Cell-to-cell movement and phloem transport of silencing involve separate mechanisms and, most likely, separate signals	73
3.3.6.2	Possible nature of the RNA species involved in cell-to-cell movement of silencing	73

3.3.6.3 No specific RNA species has been correlated with long-distance transport of silencing in plants	74
3.3.7 Plant factors required for movement of RNA silencing	75
3.3.8 Biological functions of non-cell autonomous RNA silencing in plants	75
3.3.8.1 Antiviral defence	75
3.3.8.2 A role in non-cell autonomous regulation of gene expression?	76
References	77
4 The plant extracellular matrix and signalling	85
ANDREW J. FLEMING	
4.1 Introduction	85
4.2 The cell wall and signalling	86
4.3 The cell wall as a potential source of chemical signals	87
4.3.1 Polysaccharide signals	88
4.3.2 Arabinogalactan proteins as signals	90
4.3.3 Cutin and signalling	94
4.3.4 Uncharacterised cell wall determinants involved in signalling	96
4.4 The cell wall and biophysical signalling	98
4.4.1 Connections between the cell wall and the cytosol as a conduit for intercellular signalling	101
4.5 Conclusions	102
Acknowledgements	103
References	103
5 Plasmodesmata – gateways for intercellular communication in plants	109
TRUDI GILLESPIE AND KARL J. OPARKA	
5.1 Introduction	109
5.1.1 Plasmodesmata – key components of the symplast	109
5.1.2 Plasmodesmata: simple description, complex function	110
5.1.3 Discovery of plasmodesmata	110
5.2 Structure	110
5.2.1 The general ultrastructure of plasmodesmata	110
5.2.2 Primary and secondary; simple or branched	113
5.2.3 Plasmodesmal frequency and distribution: gain and loss	116
5.2.4 Plasmodesmal components	117
5.2.5 Passage through the cytoplasmic sleeve	120
5.3 Macromolecular trafficking	120
5.3.1 Passive transport and the basal SEL	122
5.3.2 Selective transport and gating: modulation of the SEL	124
5.3.3 Physiological modulation of SEL	124
5.3.4 Fine regulation of plasmodesmal SEL – role of the cytoskeleton	129
5.3.5 'Coarse' regulation by callose	130
5.3.6 Phosphorylation, protein unfolding and chaperones	131
5.3.7 The emerging picture of plasmodesmata	134
Acknowledgements	134
References	135

6 Lessons from the vegetative shoot apex	147
JOHN F. GOLZ	
6.1 Introduction	147
6.2 Structure of the angiosperm shoot apical meristem	147
6.2.1 Zones of the meristem	148
6.2.2 Layers of the meristem	149
6.2.3 Symplastic fields within the meristem	149
6.3 Periclinal chimerae reveal a role for signalling in plant development	149
6.4 Signalling involved in meristem maintenance	151
6.4.1 The CLAVATA mutants	151
6.4.2 The CLAVATA signalling pathway	154
6.4.3 The wuschel mutant	156
6.4.4 The CLAVATA-WUSCHEL regulatory loop	156
6.5 Maintaining indeterminate cells in the meristem requires homeobox genes	158
6.6 Interactions between <i>KNOX</i> genes and hormones regulate meristem activity	161
6.7 Signals involved in organ formation	162
6.7.1 Models of phyllotaxis	162
6.7.2 The role of auxin in phyllotaxis	163
6.7.3 Organ outgrowth involves physical forces	166
6.8 Signalling between organ primordia and the meristem	166
6.9 Conclusion	169
Acknowledgements	170
References	170
7 Intercellular communication during floral initiation and development	178
GEORGE COUPLAND	
7.1 Introduction	178
7.2 Long-distance signaling during the induction to flowering	179
7.2.1 Discovery of a role for long-distance signaling in the induction of flowering	179
7.2.2 Mutations that impair long-distance signaling in pea and maize	180
7.2.3 Molecular genetic analysis of flowering-time control in <i>Arabidopsis</i> places the long-distance signal within a regulatory hierarchy	181
7.2.3.1 A network of pathways controls flowering of <i>Arabidopsis</i>	181
7.2.3.2 Spatial regulation of flowering-time control	184
7.2.3.3 Identifying the floral stimulus: a perspective from <i>Arabidopsis</i> molecular genetics	187
7.3 Intercellular communication during floral development	188
7.3.1 Some of the transcription factors that control floral meristem or organ identity act non-cell autonomously in the developing flower	189
7.3.2 Movement of transcription factors between cells defines one mechanism for short-distance signaling in the developing flower	190
7.4 Perspectives	193
References	194

8 Lessons from the root apex	199
MARTIN BONKE, SARI TÄHTIHARJU AND YKÄ HELARIUTTA	
8.1 Introduction	199
8.2 Organization of the root	199
8.2.1 Anatomy of the root meristem and procambium in the apex of a growing root	199
8.2.2 Cellular organization of the root is established during embryonic development	200
8.2.3 Development of secondary roots	203
8.3 Cell fate studies of the growing root	203
8.4 Molecular genetics of root development	205
8.4.1 Distal patterning	205
8.4.2 Genetic control of initiation of secondary roots	210
8.4.3 Molecular genetics of epidermal patterning	211
8.4.4 Patterning of ground tissue	215
8.4.5 Vascular patterning	218
8.5 Future prospects	220
Acknowledgements	220
References	220
9 Lessons from leaf epidermal patterning in plants	225
BHYLAHALLI PURUSHOTTAM SRINIVAS AND MARTIN HÜLSKAMP	
9.1 Overview	225
9.2 Introduction	225
9.3 Mechanisms of trichome patterning	225
9.3.1 Trichome differentiation	226
9.3.2 Why is a mechanism postulated to explain the trichome spacing pattern and what kind of underlying principles are operating?	226
9.3.3 Analysis of trichome initiation mutants	227
9.3.3.1 Positive regulators of trichome initiation	228
9.3.3.2 Negative regulators of trichome initiation	229
9.3.4 Interactions between the trichome initiation genes	229
9.3.5 Local cell-cell interactions leading to cell fate decisions: a model	231
9.3.6 Long-range control of trichome initiation by hormones	233
9.4 Stomatal development and patterning	233
9.4.1 Cell division pattern during stomata patterning	235
9.4.2 Cell signalling and the control of asymmetric cell divisions during stomata development	236
9.5 Perspective	237
References	237
10 Lessons on signalling in plant self-incompatibility systems	240
ANDREW G. MCCUBBIN	
10.1 Introduction	240

10.2	S-RNase-based single-locus gametophytic SI	241
10.2.1	S-RNases encode S-specificity in the pistil	242
10.2.2	S-RNase structure/function	242
10.2.3	The pollen S-gene	244
10.2.4	Non-S-linked components of S-RNase-based SI	246
10.2.5	Model for the operation of S-RNase-based SI	247
10.3	Gametophytic self-incompatibility in the Papaveraceae	249
10.3.1	The S-gene controlling stigma function in <i>P. rhoeas</i>	250
10.3.2	Structure/function of S-proteins	251
10.3.3	Biochemical responses in pollen following self-recognition	251
10.3.3.1	Ca ²⁺ signalling in the SI response	252
10.3.3.2	Protein kinase activity and the SI response	253
10.3.4	S-protein-binding proteins in pollen	254
10.3.5	Changes in the actin cytoskeleton	255
10.3.6	PCD in the SI response	255
10.3.7	Model for the mechanism of self-incompatibility in <i>P. rhoeas</i>	257
10.4	Sporophytic self-incompatibility	259
10.4.1	<i>Brassica</i> S-locus glycoproteins	260
10.4.2	SRK encodes S-haplotype specificity in the stigma	260
10.4.3	SCR/SP11 encodes pollen S-haplotype specificity	261
10.4.4	Regulation of SRK	263
10.4.5	SRK substrates	264
10.4.6	Model for the action of SSI in <i>Brassica</i>	265
10.5	Summary	267
	References	268
