Chapter 1: Introduction	1
--------------------------------------	----------

Lawrence W. Barnhouse, Wayne R. Munns, Jr., and Mary T. Sorensen

THE MANAGEMENT-SCIENCE INTERFACE

Chapter 2: Managing Risk to Ecological Populations	7
---	----------

*Gregory R. Biddinger, Peter Calow, Peter Delorme, Glenn Harris, Bruce Hope,
Bin-Le Lin, Mary T. Sorensen, and Paul van den Brink*

Introduction	7
Risk Management and Risk Assessment Context for Population-Level Ecological Risk Assessment	7
Population-Level ERA Applications	8
Laws, Regulations, Policies, Narrative Goals, and Directives That Protect the Environment	11
United States	11
Risk Management Tools: US ERA Approaches Often Used to Address Population-Level Goals	18
Canada	20
Risk Management Tools: A Canadian ERA Example	22
European Union	23
Risk Management Tools: An ERA Approach for the European Commission	24
Japan	25
Risk Management Tools: A Case Study for Japan	27
Benefits and Challenges of Risk Management with Population-Level ERA	27
Ecological Relevance	27
Regulatory Value	28
Challenges to Risk Management with Population-Level ERA	29
Need to Define Appropriateness of Use	29

Defining the Assessment Population	29
Need to Define Acceptable Population-Level Risk	30
Need for Additional Resources	31
Need for the Application of Lessons Learned	32
Need for Training and Guidance	32
Need for Improved Risk Communication	33
Achieving Risk Management with Population-Level ERA	35
Perform Basic and Applied Research	35
Engage Risk Managers	36
Define Acceptable Risk	36
Develop Accepted Tools	37
Develop Guidance	37
Provide Practitioner Training	37
Develop a Risk Communication Strategy	38
Provide Risk Manager Training	38
Achieving the Objective	39
Chapter 3: Population Protection Goals	41
<i>Charles Menzie, Nancy Bettinger, Alyce Fritz, Larry Kapustka, Helen Regan, Vibeke Moller, and Helen Noel</i>	
Introduction	41
What Is a Population?	41
The Assessment Population	44
Attributes of Organisms and Populations	46
Attributes of Organisms	46
Attributes of Populations	48
Scales for the Assessment Population	54
Protection Goals for the Assessment Population	56
Start with Management Goals	56
Clearly State Protection Goals	57
Smaller Scale Assessments	59
Larger Scale Assessments	60
Use Conceptual Models	61
Assessment and Measurement Endpoints for the Assessment Population	61
Selecting Assessment Endpoints	61
Selecting Measures of Exposure and Effect	62
Clarifying Definitions, Endpoints, and Approaches	63
Protection Goals and the Biological Population	67
Recommendations	68
SCIENTIFIC ISSUES IN POPULATION-LEVEL ECOLOGICAL RISK ASSESSMENT	
Chapter 4: Density Dependence in Ecological Risk Assessment	69
<i>S. Jannicke Moe</i>	
Introduction	69

History of the Density-Dependence Concept.....	69
Density-Dependent Processes and Population-Level Patterns.....	70
Density Dependence in Natural Resource Management	72
Potential Importance of Density Dependence in Ecological Risk Assessment.....	75
Aspects of Density Dependence.....	76
Aspects of Toxicant Effects	81
Statistical Methods for Quantifying Density Dependence.....	82
Cohort Data.....	83
Time-Series Data.....	85
Problems with Applying the Density-Dependence Concept.....	87
Detecting and Estimating Density Dependence	87
Predicting Effects of Density Dependence.....	89
Recommendations for Treatment of Density Dependence in Ecological Risk Assessments	89
Conclusions	91

Chapter 5: Genetic Variation in Population-Level Ecological Risk Assessment

93

Diane Nacci and Ary A. Hoffmann

Introduction: Challenges and Opportunities for Genetics in Population-Level Ecological Risk Assessment.....	93
Genetic Variation: Neutral, Adaptive, and Detrimental	94
Neutral Genetic Variation and Population Condition.....	95
Size and Richness: Effective Population Size and Genetic Diversity	96
Uniqueness: Geographic Distribution and Differentiation.....	97
Adaptive Genetic Variation and Fitness	98
Estimating Fitness	98
Establishing Causal Connections between Fitness Effects and Genes.....	100
Predicting Adaptive Shifts	101
Genetic Variation and Risks from Chemical Exposures.....	103
Selection and Adaptation to Chemical Exposures	104
Evidence of Chemical Adaptation	105
Genetic Contributions to Population-Level ERA.....	108
Genetic Contributions to Empirical Assessments	108
Genetic Contributions to Modeling Assessments.....	109
Future Research Needs and Challenges	111
Conclusions	112

Chapter 6: The Spatial Structure of Populations and Ecological Risk Assessment.....

113

Wayne G. Landis and Andrew Deines

Introduction.....	113
A Short History	113
Introduction to This Chapter.....	114

Populations in Space.....	114
Examples of Spatial Structure	116
Application of Metapopulation and Patch-Dynamic Models to Investigate Toxicant Effects	118
Experimental Results	123
A Metapopulation Experiment to Simulate Toxicant Effects	123
Application of Spatial Relationships into the Risk Assessment of Populations	123
Consideration of Spatial Structure of Populations in Risk Assessment	123
The Problem of the Reference Site	124
Tools for the Analysis of Spatial Relationships	124
When to Ignore Spatial Structure?	125
Expansion of Risk Assessment beyond Chemical Impacts	125
Summary	127

Chapter 7: What Conservation Biology and Natural Resource Management Can Offer Population-Level Ecological Risk Assessment.....

Jennifer A. Gervais and Helen M. Regan

Introduction	129
Environmental and Demographic Variation	130
Tools for Parameter Estimation	132
Demographic Parameter Estimation Techniques	132
Population Size and Density Estimation Techniques	133
Minimizing Sampling and Parameter Estimation Error	133
Methods of Inference	134
Information-Theoretic Approaches	134
Bayesian Techniques	135
The Use of Population Models	137
Retrospective versus Prospective Modeling	137
Prediction versus Projection	138
Heuristic versus Applied Models	139
Models and the Inescapable Uncertainty	139
Coping with Uncertainty: Two Approaches	141
Solution 1: Simplify the Questions to Fit the Available Data	141
Solution 2: Consider Multiple Working Hypotheses and Seek Relative Answers	142
Application, Interpretation, and Communication of Model Results	144
A Realistic View of the Role of Models	144
Recognizing Model Limitations and Appropriate Usage	144
Models as One Step in the Decision-Making Process	145
A Precautionary Tale	147
More Constructive Approaches	149
Conclusions	150

APPROACHES TO POPULATION-LEVEL ECOLOGICAL RISK ASSESSMENT

Chapter 8: Empirical Approaches to Population-Level Ecological Risk Assessment 151

Tina M. Carlsen, S. Jannicke Moe, Sandra Brasfield, Peter F. Chapman, Ary Hoffmann, Wayne G. Landis, Diane E. Nacci, Helen Noel, and Julann A. Spromberg

Introduction.....	151
Empirical Data Useful in Population-Level ERAs	154
Site Attributes.....	155
Biological Attributes of Assessment Population	156
Attributes of Organisms	158
Primary Population Attributes.....	158
Secondary Population Attributes.....	159
Life History	160
Empirical Methods for Characterizing Populations.....	161
Habitat Characterization	161
Biological Surveys	163
Demographic Studies	164
Field Manipulation.....	165
Methods for Measuring Genetic Variation in Wild Populations.....	166
Statistical Methods.....	168
Examples.....	169
Pesticide Registration.....	169
Standard Laboratory Studies.....	169
Empirical Measurement of Population Effects — Aquatic Species	170
Empirical Measurement of Population Effects — Terrestrial Species ..	172
Terrestrial Wildlife Populations Inhabiting Contaminated Sites.....	172
Habitat Evaluation.....	173
Population Evaluation	176
Recommendations.....	177

Chapter 9: Modeling Approaches to Population-Level Ecological Risk Assessment 179

Wayne R. Munns, Jr., Jennifer Gervais, Ary A. Hoffman, Udo Hommen, Diane E. Nacci, Mayuko Nakamaru, Richard Sibly, and Chris J. Topping

Introduction.....	179
Modeling Populations in Ecological Risk Assessment	181
Unstructured (Scalar) Models.....	182
Biologically Structured Models.....	185
Individual-Based Models	191
Metapopulation Models	194
Spatially Explicit Models	194

Incorporating Genetic Attributes into Population Dynamics Models	201
Modeling to Support Risk Management and Decision-Making	205
Unresolved Issues and Recommendations	210

Chapter 10: A Framework for Population-Level Ecological

Risk Assessment	211
------------------------------	------------

*Randy Wentsel, Nelson Beyer, Valery Forbes, Steve Maund, and
Robert Pastorok*

Development of Ecological Risk Assessment Framework	211
What Is ERA?	211
Other Frameworks for Population-Level ERA	213
Population Viability Analysis	213
Scientific Steering Committee of the European Commission's Health and Consumer Protection Directorate-General	214
Oak Ridge National Laboratory Framework	214
A Framework for Population-Level ERA	215
Overview of the Framework	215
Defining the Management Issues and Decision Criteria	217
Problem Formulation	217
Is a Population-Level Risk Assessment Warranted?	220
How Will It Add Value?	220
Define Assessment Population for Purposes of the Risk Assessment	221
Define the Properties and Attributes (Assessment Endpoints) of the Population of Concern	221
Develop the Conceptual Model	222
Select Methods to Be Used to Estimate Population Risk	222
Empirical Methods	224
Modeling Approaches	225
Analysis	228
Components of the Analysis Phase of a Population-Level ERA	228
Applying Empirical Approaches	228
Applying Population Models	230
Derivation of Stressor-Response Relationships	231
Integrating the Results of Empirical and Modeling Approaches	231
Risk Characterization	232
Risk Estimation	232
Risk Estimates Derived from Empirical Approaches	233
Risk Estimates Derived from Population Models	233
Risk Description	235
Identify and Discuss Variability and Uncertainty	237
Communication to Managers	237

A PATH FORWARD

Chapter 11: Issues and Recommendations	239
---	------------

Wayne R. Munns, Jr., Lawrence W. Barnhouse, and Mary T. Sorensen

Introduction	239
--------------------	-----

Implementation Issues	239
Decision Contexts Frame the Assessment.....	240
Defining Assessment Population, Spatial Scale, and Temporal Frame	241
Balance of Empirical and Modeling Approaches	242
Interpreting Significance of Population-Level Effects	242
Guidance, Training, and Acceptance	244
Implications for Research and Development	245

REFERENCES AND APPENDICES
