

CONTENTS

	PREFACE	vii
1.	INTRODUCTION Chief events in animal development – History of thoughts and conceptual developments – Experimental embryology - The concept of differential gene activity	1
2.	GAMETOGENESIS Origin of germ cells - Gamete formation - Significance of gametogenesis	5
3.	SPERMATOGENESIS Sperm structure - Head, Midpiece, Sperm flagellum - Types of sperm - Typical and Atypical - Sperm cell formation - Endocrine regulation of spermatogenesis	8
4.	OOGENESIS Stages of Oogenesis - Composition of yolk - Oogenesis in Amphibians - <i>Previtellogenic phase, Vitellogenic phase, Heterosynthetic derivation of yolk, Genetic control of vitellogenin synthesis in amphibians, Endocrine regulation of vitellogenesis and egg maturation</i> - Oogenesis in Insects - <i>Vitellogenesis, Vitellogenins and Vitellins, Vitellogenin uptake into the oocytes, Hormonal regulation of vitellogenesis, Genetic control of vitellogenin synthesis</i> - Types of eggs - Egg envelopes - <i>Primary egg envelope, Secondary envelope, Tertiary envelopes</i> - Polarity and symmetry	16
5.	FERTILIZATION Sperm aggregation - Chemotaxis - Acrosome reaction - Sperm-egg interaction - Sperm entry into egg - Egg activation - Calcium release initiates egg activation - Cortical reaction - Physiological polyspermy - Fusion of male and female pronuclei - Post fertilization metabolic activation - Parthenogenesis	29
6.	CLEAVAGE Mechanism of cleavage - Patterns of embryonic cleavage - <i>Radial holoblastic cleavage - Spiral cleavage - Bilateral holoblastic cleavage - Rotational holoblastic cleavage - Amphibians - Meroblastic cleavage - Superficial cleavage</i> - Determinate and regulatory embryos - Cell lineage - Nuclear transplantation experiments – Cloning	42

7.	GASTRULATION	55
	Factors affecting gastrulation - Cellular and molecular mechanics of gastrulation movements - Types of gastrulation movements - <i>Epiboly, Invagination, Involution, Ingression</i> - Types of gastrulation in representative animal embryos - <i>Sea urchin, Amphioxus, Amphibians (Xenopus), Aves, Mammals</i> - Comparative aspects of gastrulation - Fate maps - <i>Amphibians, Chick</i> - Embryonic axialization - Inductive interaction and neurulation - <i>Neurulation in Amphibians, Mechanism of neural tube formation, Neuwkoop center</i> - Exogastrulation - The primary organizer	
8.	CELL DIFFERENTIATION	77
	Mechanism of gene action during cell differentiation - Factors influencing cellular differentiation	
9.	DEVELOPMENTAL GRADIENTS	81
	Developmental gradients in <i>Hydra</i> - Maternal effect genes and axial gradients in <i>Drosophila</i> development	
10.	ORGANOGENESIS	86
	Formation of vertebrate brain - Formation of brain regions, <i>Placodes</i> - Development of the eye - Heart formation in frog and chick - <i>Frog, Chick</i> - Urinogenital organogenesis - <i>Pronephros, Mesonephros, Metanephros</i> , Inductive interactions between the ureteric bud and the mesenchymal cells - Development of immune system - Cell mediated and humoral immunity, Development of immune cells, tissues and organs - Sexual differentiation - Freemartin and MIS - Genes involved in gonadal differentiation	
11.	PATTERN FORMATION AND DEVELOPMENT OF LIMB	103
	Development of wing bud - Cellular interaction within the developing wing bud	
12.	EXTRAEMBRYONIC MEMBRANES	107
	Extra embryonic membranes in birds - <i>Yolk sac, Amnion, Chorion, Allantois</i> - Extra embryonic membranes in mammals	
13.	PLACENTATION	112
	Placenta of mammals - Implantation - Formation of placenta in Humans - Evolution and classification of placenta - <i>Yolk sac placenta, Allantoic placenta</i>	

14.	EXPERIMENTAL EMBRYOLOGY	118
	Mammalian reproductive cycle - Hormonal regulation of reproductive cycle - Endocrine changes associated with normal pregnancy - Induced ovulation in humans - Multiple ovulation and embryo transfer in cattle - Embryo splitting - <i>In vitro</i> fertilization - IVF in cattle, IVF in humans - Cryopreservation - Methods adopted in cryopreservation - Cryopreservation of human spermatozoa - Human embryo cryopreservation - Ethical issues in cryopreservation	
15.	METAMORPHOSIS	128
	Amphibian metamorphosis - Gene regulation during amphibian metamorphosis - Molting and metamorphosis in insects - Gene action during insect metamorphosis	
16.	REGENERATION	134
	Types of regeneration - Regeneration in Hydra - Gradients in Hydra regeneration - Regeneration in Planarians - Blastema formation - Urodele limb regeneration - Morphogenesis and redifferentiation - Sources of blastemal cells - Factors stimulating regeneration of limbs - Pattern formation in the blastema	
17.	PROGRAMMED CELL DEATH	141
18.	AGEING AND SENESCENCE	143
	Cellular ageing - Genes and senescence
