

CONTENTS

PREFACE.....	xi
--------------	----

Structure and Function of the Epidermal Growth Factor (EGF/ErbB) Family of Receptors

DANIEL J. LEAHY

I. Introduction.....	1
II. The EGF and EGFR Families	3
III. Association of ErbB Receptors with Human Disease	6
IV. Structure of Individual ErbB Receptor Domains	7
V. Structure of Entire ErbB Receptor Ectodomains	9
VI. HER2.....	15
VII. Therapeutic Anti-HER2 Antibodies.....	18
VIII. Remaining Questions	20
References.....	22

The Three-Dimensional Structure of Integrins and Their Ligands, and Conformational Regulation of Cell Adhesion

TIMOTHY A. SPRINGER AND JIA-HUAI WANG

I. Introduction.....	30
II. Conformational Regulation of Integrin Structure and Function	31
III. Integrin/Ligand Interactions	47
References.....	57

Structures of Axon Guidance Molecules and Their Neuronal Receptors

WILLIAM A. BARTON, JUHA-PEKKA HIMANEN, ALEXANDER ANTIPENKO,
AND DIMITAR B. NIKOLOV

I. Introduction.....	65
II. Eph Receptors and Ephrins	66

III. Semaphorins, Neuropilins, and Plexins.....	82
IV. Myelin-Associated Inhibitors of Axonal Regeneration	90
V. Conclusion and Perspectives	98
References.....	99

Shared Cytokine Signaling Receptors: Structural Insights from the gp130 System

MARTIN J. BOULANGER AND K. CHRISTOPHER GARCIA

I. Cross-Reactive Signaling Receptors in Biology.....	108
II. Cytokines and Receptors	109
III. The Growth Hormone Paradigm: Generalities and Limitations	110
IV. Shared Signaling Receptors for Hematopoietic Cytokines ...	113
V. gp130 Family of Cytokines and Receptors.....	118
VI. A Structural Basis of gp130 Cross Reactivity: Site II	128
VII. Thermodynamic Basis for a Universal Binding Solution	130
VIII. Cross-Reactivity of the gp130 IGD with Cytokine Site III.....	132
IX. Predicting the Higher-Order Assemblies of the Asymmetric Complexes (gp130/LIFR)	135
X. Translating Ligand Recognition into Signaling.....	137
References.....	139

The Structural Basis for Biological Signaling, Regulation, and Specificity in the Growth Hormone–Prolactin System of Hormones and Receptors

ANTHONY A. KOSSIAKOFF

I. Structural Basis for Receptor Homodimerization	149
II. Hormone Receptor Binding Sites.....	152
III. Hormone-Receptor Binding Energetics: The Binding “Hot-Spot” Concept	155
IV. Stereoselectivity of the Prolactin Receptor (hPRLR)	158
V. Comparison of the hGH Site1 and Site2 Binding Energy Epitopes in the hGH-hGHR Ternary Complex	159
VI. Protein Engineering to Create New Properties	160
VII. Allosteric Effects, A Big Surprise.....	161

VIII. Biological Implications of Transient Receptor Dimerization	164
IX. Mechanism of ECD2 Binding, the Regulation Step in Biological Signaling.....	165
X. Future Directions.....	165
References.....	166

Structural Analysis of IL-10 and Type I Interferon Family Members and Their Complexes with Receptor

MARK R. WALTER

I. Introduction	171
II. Structures of the HCIIs	177
III. Structures of the Class 2 Homology Region (C2HR)	195
IV. Structure of the High-Affinity HCII/C2HR Interfaces.....	204
V. Concluding Remarks	215
References.....	215

Assembly of Post-Receptor Signaling Complexes for the Tumor Necrosis Factor Receptor Superfamily

HAO WU

I. Introduction	226
II. Domain and Oligomeric Structures of TRAFs.....	234
III. TRAF2-Receptor Interactions: Establishment of the Paradigm	241
IV. TRAF3-Receptor Interactions: Similarities and Differences with TRAF2	248
V. TRAF6-Receptor Interactions: Distinct Specificity.....	251
VI. Thermodynamics of TRAF-Receptor Interactions.....	254
VII. TRAF2-TRADD Interaction: A Novel Mode of TRAF Signaling	256
VIII. TRAF Signaling Inhibitors.....	261
IX. DD and DD-DD Interactions.....	262
X. Conclusion: Emerging Principles of Post-Receptor Signal Transduction	265
References.....	271

NKG2D and Related Immunoreceptors

ROLAND K. STRONG AND BENJAMIN J. MCFARLAND

I. T Cell Receptors and MHC Class I Proteins: Paradigms of Immunological Recognition	282
II. NK Cells and Receptors	284
III. NKG2x NK Cell Receptors	288
IV. HuNKG2D Ligands: MIC-A/B	291
V. HuNKG2D Ligands: ULBPs	293
VI. MuNKG2D Ligands: RAE-1s, H60, and MULT1	294
VII. NKG2D-Ligand Complexation	295
VIII. NKG2D-Ligand Recognition Degeneracy: "Rigid Adaptation" Rather Than "Induced-Fit"	299
IX. NKG2D: Open Questions	303
X. NKG2D: Implications for NKG2x-CD94 Recognition	304
XI. MIC and $\gamma\delta$ TCRs	306
References	307

Ionotropic Glutamate Receptor Recognition and Activation

ROBERT E. OSWALD

I. Introduction	314
II. Beginnings of Structure: Cloning, Mutagenesis, Transmembrane Topology, and Homology Models	315
III. The Amino Terminal Domain (ATD)	318
IV. Structure and Dynamics of the Glutamate-Binding Domain	319
V. Structure of the Ion Channel	329
VI. The C-Terminal Domain	331
VII. Relating Structure, Function, and Dynamics: Channel Gating and Desensitization	332
VIII. Evolution of Glutamate Receptors	339
IX. Summary	341
References	341

Chemokine-Receptor Interactions: GPCRs, Glycosaminoglycans and Viral Chemokine Binding Proteins

ELAINE K. LAU, SAMANTHA ALLEN, ANDRO R. HSU, AND TRACY M. HANDEL

I. Introduction	352
II. The Chemokine Superfamily	354
III. Interaction of Chemokines and Glycosaminoglycans.....	367
IV. Viral Chemokines and Receptors, Chemokine Mimics, and Chemokine Binding Proteins	373
V. Chemokines and Disease	378
References.....	381

Chemotaxis Receptors and Signaling

AARON F. MILLER AND JOSEPH J. FALKE

I. Introduction to Chemotaxis	394
II. Signal Transduction Events.....	396
III. G Protein-Coupled Receptors.....	400
IV. Conserved Elements of GPCR Structure.....	402
V. Rhodopsin Structure.....	407
VI. Proposed GPCR Activation Mechanisms.....	408
VII. Activation Mechanisms of Specific Chemotaxis GPCRs.....	413
VIII. Receptor Oligomerization	426
IX. Conclusions	429
References.....	432

AUTHOR INDEX.....	445
SUBJECT INDEX	487
