Preface to <i>Mobile DNA</i> (1989)	•	xvii

I. Introduction to Mobile DNAs: What They Are, Their Cellular Roles, How They Move, and How To Exploit Them

1. Mobile DNA: an Introduction	•	3
<i>Nancy L. Craig</i>		
2. Chemical Mechanisms for Mobilizing DNA	•	12
<i>Kiyoshi Mizuuchi and Tania A. Baker</i>		
3. Putting Mobile DNA to Work: the Toolbox	•	24
<i>Jef D. Boeke</i>		
4. Chromosome Manipulation by Cre-lox Recombination	•	38
<i>Brian Sauer</i>		
5. Transposable Elements as Sources of Genomic Variation	•	59
<i>Margaret G. Kidwell and Damon R. Lisch</i>		

II. Conservative Site-Specific Recombination: Rearrangements That Involve Covalent Protein-DNA Intermediates

6. A Structural View of Tyrosine Recombinase Site-Specific Recombination	•	93
<i>Gregory D. Van Duyne</i>		

7. λ Integrase and the λ Int Family	•	118
<i>Marco A. Azaro and Arthur Landy</i>		

8. Xer Site-Specific Recombination: Promoting Chromosome Segregation	•	149
<i>François-Xavier Barre and David J. Sherratt</i>		

9. Gene Acquisition in Bacteria by Integron-Mediated Site-Specific Recombination	•	162
<i>Gavin D. Recchia and David J. Sherratt</i>		

10. Conjugative Transposons and Related Mobile Elements	•	177
<i>Gordon Churchward</i>		

11. Site-Specific Recombination by the Flp Protein of <i>Saccharomyces cerevisiae</i>	•	192
<i>Makkuni Jayaram, Ian Grainge, and Gena Tribble</i>		

12. Theme and Variation in Tyrosine Recombinases: Structure of a Flp-DNA Complex	•	219
<i>Phoebe A. Rice</i>		

13. Bacterial Site-Specific DNA Inversion Systems	•	230
<i>Reid C. Johnson</i>		

14. The Movement of Tn3-Like Elements: Transposition and Cointegrate Resolution	•	272
<i>Nigel D. F. Grindley</i>		

III. Recombination via Direct Transesterifications: Transposition Reactions That Involve Only DNA Intermediates

15. Insertion Sequences Revisited	•	305
<i>Michael Chandler and Jacques Mahillon</i>		

16. Transposition of IS911 • 367
*P. Rousseau, C. Normand, C. Loot, C. Turlan,
 R. Alazard, G. Duval-Valentin, and M. Chandler*

17. Transposition of Phage Mu DNA
 • 384
George Chaconas and Rasika M. Harshey

18. Tn5 Transposition • 403
William S. Reznikoff

19. Tn7 • 423
Nancy L. Craig

20. Transposon Tn10 • 457
David B. Haniford

21. P Transposable Elements in *Drosophila melanogaster* • 484
Donald C. Rio

22. The Tc1/mariner Family of Transposable Elements • 519
*Ronald H. A. Plasterk and
 Henri G. A. M. van Luenen*

23. MuDR/Mu Transposable Elements of Maize • 533
Virginia Walbot and George N. Rudenko

24. The hAT and CACTA Superfamilies of Plant Transposons • 565
Reinhard Kunze and Clifford F. Weil

IV. Recombination via Direct Transesterifications: Transposition Reactions That Involve RNA and DNA Intermediates

25. Retroviral DNA Integration • 613
Robert Craigie

26. Ty1 and Ty5 of *Saccharomyces cerevisiae* • 631
Daniel F. Voytas and Jef D. Boeke

27. Ty3, a Position-Specific, Gypsy-Like Element in *Saccharomyces cerevisiae* • 663
*Suzanne B. Sandmeyer, Michael Aye, and
 Thomas Menees*

28. Newly Identified Retrotransposons of the Ty3/gypsy Class in Fungi, Plants, and Vertebrates • 684
Henry L. Levin

V. Gene Assembly by Recombination

29. V(D)J Recombination • 705
Martin Gellert

30. Genome-Wide Rearrangements of DNA in Ciliates • 730
*Meng-Chao Yao, Sandra Duhaucourt, and
 Douglas L. Chalker*

VI. Non-Long Terminal Repeat Elements: Target-Primed Reverse Transcription

31. Mobile Introns: Pathways and Proteins • 761
Marlene Belfort, Victoria Derbyshire, Monica M. Parker, Benoit Cousineau, and Alan M. Lambowitz

32. Retrons • 784
*Kunitoshi Yamanaka, Tadashi Shimamoto,
 Sumiko Inouye, and Masayori Inouye*

33. I Elements in *Drosophila melanogaster* • 796
*Alain Bucheton, Isabelle Busseau, and
 Danielle Teninges*

34. R2 and Related Site-Specific Non-Long Terminal Repeat Retrotransposons • 813
Thomas H. Eickbush

35. Mammalian LINE-1 Retrotransposons and Related Elements • 836
John V. Moran and Nicolas Gilbert

36. Telomeres and Transposable Elements • 870
Mary-Lou Pardue and P. G. DeBaryshe

VII. Other Mobile DNAs

37. IS91 Rolling-Circle Transposition • 891
*M. Pilar Garcillán-Barcia, Irantzu Bernales,
 M. Victoria Mendiola, and Fernando de la Cruz*

38. Adeno-Associated Virus • 905
Richard H. Smith, Jr., and Robert M. Kotin

VIII. Transfer of Information via Gene Conversions

39. Switching of *Saccharomyces cerevisiae* Mating-Type Genes • 927
James E. Haber

40. Antigenic Variation in Eukaryotic Parasites • 953
Piet Borst

41. Antigenic Variation by Relapsing Fever *Borrelia* Species and Other Bacterial Pathogens • 972
Alan Barbour

IX. Genomes and Mobile DNAs

42. Control of Mobile DNA • 997
Nina Fedoroff

43. Interactions between Transposable Elements and the Host Genome • 1008
Mariano Labrador and Victor G. Corces

44. Eubacterial Genomes • 1024
Allan Campbell

45. Mobile Genetic Elements and Bacterial Pathogenesis • 1040
Brigid M. Davis and Matthew K. Waldor

46. Archaeal Mobile DNA • 1060
Peter Redder, David Faguy, Kim Brügger, Qunxin She, and Roger A. Garrett

47. Mobile Elements in Animal and Plant Genomes • 1074
Prescott L. Deininger and Astrid M. Roy-Engel

48. Evolution of DNA Transposons in Eukaryotes • 1093
Hugh M. Robertson

49. Origins and Evolution of Retrotransposons • 1111
Thomas H. Eickbush and Harmit S. Malik

X. Newly Discovered Transposon Families

50. Miniature Inverted-Repeat Transposable Elements and Their Relationship to Established DNA Transposons • 1147
Cédric Feschotte, Xiaoyu Zhang, and Susan R. Wessler

- Index • 1159

- Color Plates • After page 302
