

Contents

Preface xv

1 | DNA Damage 1

Spontaneous Alterations of and Damage to DNA 2

Mismatches 2

Spontaneous Alterations in the Chemistry of DNA Bases 6

Loss of Bases—Depurination and Depyrimidination 13

Oxidative Damage to DNA 14

Environmental Damage to DNA 19

Physical Agents That Damage DNA 19

Chemical Agents That Damage DNA 31

DNA Damage and Chromatin Structure 42

Detection and Measurement of Base Damage in DNA 45

Enzyme Probes for Measuring DNA Damage 45

Postlabeling Methods for Detecting Base Damage 46

Specific Antibodies for Measuring DNA Damage 47

Summary and Conclusions 47

2 | Introduction to Mutagenesis 59

Mutations and Mutants: Some Definitions 59

Point Mutations and Other Classes of Mutations 61

Base Substitution Mutations 62

Mutations Resulting from the Addition or Deletion of Small Numbers of Base Pairs 64

Systems Used To Detect and Analyze Mutations 65

The First Systems for Analysis of Mutagenesis 65

The Ames *Salmonella* Test: a Widely Used Reversion System 66

Other Examples of Forward Mutational Systems 68

Special Systems To Detect Frameshift or Deletion Mutations 70

Analyses of Mutagenesis in Mammalian Cells 71

Shuttle Vectors 71

Sequencing of Mutated Target Genes in Mammalian Cells by Use of PCR 72

Chemical and Physical Methods for Identifying DNA Fragments Carrying a Mutation 75

Analyses of Mutagenesis in Whole Animals 76

Use of Site-Specific Adducts 77

Insights into the Molecular Basis of Mutagenesis from the Study of Purified Polymerases 78

Error Discrimination by DNA Polymerases: Mechanisms Responsible for Polymerase Fidelity 79

Mechanisms Contributing to Spontaneous Mutagenesis 83

Base Substitution Mutations Resulting from Misincorporation during DNA Synthesis 83

Mutations Resulting from Misalignments during DNA Synthesis 83

3 DNA Repair by Reversal of Damage 91

Photoreactivation of DNA 92

DNA Photolyase (Photoreactivating Enzyme) 94

Properties and Mechanism of Action of DNA Photolyases 95

Light-Dependent "Repair" of (6-4) Photoproducts in DNA 107

Photoreactivation of RNA 107

Repair of Spore Photoproduct 107

Formation of Spore Photoproduct 108

Repair of *O*⁶-Guanine and *O*⁴-Thymine Alkylations and Phosphotriesters in DNA 108

Adaptation to Alkylation Damage in *E. coli* 109

Repair of *O*⁶-Alkylguanine and *O*⁴-Alkylthymine in DNA 110

*O*⁶-Methylguanine-DNA Methyltransferase I of *E. coli* 110

Role of Ada Protein in the Adaptive Response to Mutagenesis 114

Termination of the Adaptive Response 119

DNA Alkyltransferase II 120

DNA Alkyltransferases in Other Organisms 121

Repair of Single-Strand Breaks by Direct Rejoining 126

Summary and Conclusions 126

4 Base Excision Repair 135

Excision Repair of DNA—General Considerations 135

DNA Glycosylases 139

3-Methyladenine-DNA Glycosylase 140

Uracil-DNA Glycosylase 147

Hydroxymethyluracil-DNA Glycosylase 153

Hypoxanthine-DNA Glycosylase 153

5-Methylcytosine-DNA Glycosylase 154

Thymine Mismatch-DNA Glycosylase 154

DNA Glycosylases with Associated AP Lyase Activity 154

MutY-DNA Glycosylase 157

Formamidopyrimidine-DNA Glycosylase	158
Thymine Glycol-DNA Glycosylase	161
Endonucleases VIII and IX	162
Pyrimidine Dimer-DNA Glycosylase	163
Bacteriophage T4 PD-DNA Glycosylase	164
<i>M. luteus</i> PD-DNA Glycosylase	166
A PD-DNA Glycosylase Activity in <i>S. cerevisiae</i>	167
Biological Significance of the AP Lyase Activity Associated with DNA Glycosylases	167
Concluding Comments on DNA Glycosylases	169

AP Endonucleases 169

AP Endonucleases in <i>E. coli</i>	169
AP Endonucleases in Eukaryotes	173
BAP1, APEX, and HAP1 AP Endonucleases	175

Relevance of Base Excision Repair to Oxidative Damage—General Considerations 177

Postincision Events during Base Excision Repair 177

DNA Deoxyribosephosphodiesterase of <i>E. coli</i>	177
Completion of Base Excision Repair Initiated by the Phage T4 and <i>M. luteus</i> PD-DNA Glycosylases	178
Repair Synthesis during Base Excision Repair	178
DNA Ligation	181

5 | Nucleotide Excision Repair in Prokaryotes 191

UvrABC Damage-Specific Endonuclease of *E. coli* 192

The <i>uvrA</i> ⁺ Gene and UvrA Protein	194
The <i>uvrB</i> ⁺ Gene and UvrB Protein	197
The <i>uvrC</i> ⁺ Gene and UvrC Protein	204
Substrate Specificity of the UvrABC Endonuclease	207
Roles of ATP in Damage-Specific Incision	209
Role of Proteolysis in the Regulation of DNA Incision by the UvrABC Endonuclease	209
Summary of Damage-Specific Incision during Nucleotide Excision Repair in <i>E. coli</i>	209

Postincisional Events—Excision of Damaged Nucleotides, Repair Synthesis, and DNA Ligation 210

Role of UvrD Protein (DNA Helicase II) and Pol I in Excision and Repair Synthesis	210
Repair Synthesis	214
DNA Ligation	214

Nucleotide Excision Repair of Cross-Links in DNA—a Special Situation 214

A Uvr Protein-Independent Pathway for the Repair of Cross-Links in DNA?	216
---	-----

Coupling of Transcription and Nucleotide Excision Repair in *E. coli* 216

Miscellaneous Functions Possibly Associated with Nucleotide Excision Repair 218

Are Uvr Proteins Involved in Other Cellular Processes in <i>E. coli</i> ?	218
Detection and Measurement of Nucleotide Excision Repair	219
Nucleotide Excision Repair in Other Prokaryotes	223
Other Damage-Specific DNA-Incising Activities?	225
Summary and Conclusions	225

6	Nucleotide Excision Repair in Lower Eukaryotes	233
	Eukaryotic Models for Nucleotide Excision Repair	234
	Nucleotide Excision Repair in the Yeast <i>Saccharomyces cerevisiae</i>	234
	Overview of the Genetics of Nucleotide Excision Repair	234
	Some Nucleotide Excision Repair Genes Were Discovered Incidentally	236
	Potential Roles of <i>RAD7</i> , <i>RAD16</i> , and <i>RAD23</i> in Perturbing Chromatin Structure	238
	Possible Presence of More Genes for Nucleotide Excision Repair	240
	Genes That Are Indispensable for Nucleotide Excision Repair	241
	Other Genes Involved in Nucleotide Excision Repair	264
	Summary of Nucleotide Excision Repair in Yeast Cells	266
	Other Members of the <i>RAD3</i> Epistasis Group	267
	Enzymes Involved in Postincision Events during Nucleotide Excision Repair in Yeast Cells	268
	Nucleotide Excision Repair in Other Lower Eukaryotes	272
	<i>Schizosaccharomyces pombe</i>	272
	<i>Drosophila melanogaster</i>	273
	Other Lower Eukaryotes	274
	Conclusions	275
7	Nucleotide Excision Repair in Mammalian Cells: General Considerations and Chromatin Dynamics	283
	Biology of Nucleotide Excision Repair in Mammalian Cells	283
	Damage-Specific Incision of DNA	284
	Loss of Radiolabeled Thymine-Containing Pyrimidine Dimers from DNA	284
	Loss of Sites in DNA Sensitive to Pyrimidine Dimer-Specific Enzymes	284
	Ligation-Mediated PCR	284
	Measurement of Repair Synthesis in DNA	285
	Kinetics of Nucleotide Excision Repair in Mammalian Cells	285
	Repair Patch Sizes in Mammalian Cells	288
	Influence of Chromatin and Higher-Order Structure on Nucleotide Excision Repair in Mammalian Cells	289
	Nucleotide Excision Repair in Chromatin	291
	Heterogeneity of Nucleotide Excision Repair in the Mammalian Genome	294
	Intragenomic Heterogeneity	294
	Intragenic Heterogeneity of Repair: Preferential Repair of Actively Transcribed DNA	296
	Transcription-Dependent Nucleotide Excision Repair	298
	Other Aspects of Genomic Organization during Excision Repair	304
	Methylation of DNA during Excision Repair	304
	ADP-Ribosylation and DNA Repair in Mammalian Cells	306
	The Poly(ADP-Ribose) Polymerase Gene	310
	Conclusions	310
8	Nucleotide Excision Repair: Mammalian Genes and Proteins	317
	Genes Involved in Nucleotide Excision Repair	317
	Excision Repair Mutants from Rodent Cells	317
	Rodent Genetic Complementation Groups	318
	Cloning Human <i>ERCC</i> Genes	320

Use of Rodent Cell Lines for Cloning Human Repair Genes: Concluding Comments 331

Mutant Cell Lines from Patients with XP 332

Nucleotide Excision Repair in Cell-Free Systems 340

Requirements for Nucleotide Excision Repair in a Cell-Free System 343

Permeabilized Cell Systems for Identifying Factors Required for Nucleotide Excision Repair 344

Mammalian DNA Polymerases 345

Use of Permeabilized Cell Systems To Study Repair Synthesis 351

Mammalian DNA Ligases 352

Mammalian DNA Topoisomerases and DNA Repair 356

Nucleotide Excision Repair of Mitochondrial DNA 357

Conclusions 357

9 | Mismatch Repair 367

Early Biological Evidence for the Existence of Mismatch Repair 368

Genetic Phenomena Suggesting the Existence of Mismatch Repair 368

Long-Patch Mismatch Repair in Prokaryotes 369

Mismatch Repair after Transformation of *S. pneumoniae* 369

Biochemistry of Methyl-Directed Mismatch Repair in *E. coli* 376

Long-Patch Mismatch Repair in Eukaryotes 388

In Vivo Evidence for Mismatch Repair in Yeasts and Fungi 388

Homologs of *mutL*⁺ and *mutS*⁺ in Eukaryotic Cells 389

In Vitro Analyses of Mismatch Repair in Eukaryotic Cells: Human Cells Have a Bidirectional Mismatch Repair System 391

An Alkylation-Tolerant Mutator Human Cell Line Is Deficient in Strand-Specific Repair 393

Destabilization of Tracts of Simple Repetitive DNA by Mutations Affecting Mismatch Repair: Implications for Human Diseases 393

Short-Patch Mismatch Repair in Prokaryotes and Eukaryotes 396

Very Short Patch Mismatch Correction in *E. coli* 396

MutY-Dependent Mismatch Repair in *E. coli* 398

Short-Patch Mismatch Repair in Mammalian Cells 399

10 | SOS Responses and DNA Damage Tolerance in Prokaryotes 407

The SOS Responses 408

Current Model for SOS Regulation 408

Development of the Model for SOS Regulation 411

Differential Regulation of SOS-Controlled Genes 427

What Is the SOS-Inducing Signal? 428

Physiological Considerations of the SOS Regulatory Circuit 432

SOS Responses in Other Bacteria 434

RecA Protein: a Protein with Mechanistic Roles in Homologous Recombination and DNA Repair 435

Recombination Reactions of RecA Protein 436

DNA Replication and Damage Tolerance in Cells Exposed to DNA-Damaging Agents 440

Transient Inhibition of DNA Synthesis after DNA Damage 440

Recovery of DNA Replication after DNA Damage 441

Repair of Double-Strand Breaks 453

11 | Mutagenesis in Prokaryotes 465

SOS-Dependent Mutagenesis: Requirements for Particular Gene Products 465

SOS Mutagenesis by UV Radiation and Most Chemicals Is Not a Passive Process 465

The UmuD and UmuC Proteins Are Important for UV Radiation and Chemical Mutagenesis 467

Posttranslational Activation of UmuD Protein: a New Dimension to SOS Regulation 472

umuD⁺*C*⁺ Homologs in Other Organisms 479

Genetic and Physiological Evidence for the Involvement of RecA Protein, DNA Polymerase III, and GroEL/GroES Proteins in SOS Mutagenesis 481

Inferences about the Mechanism of SOS Mutagenesis Based on Mutational Spectra and Site-Directed Adduct Studies 486

The Original *lacI* System: a Purely Genetic Means of Determining Mutational Spectra 487

Mutational Spectra Obtained by Direct DNA Sequencing 489

Factors Influencing the Mutational Spectrum for a Given Mutagen 489

Influence of Transcription-Coupled Excision Repair on Mutational Spectra 490

Identification of Premutagenic Lesions 492

The Predominance of C → T Transitions in UV Radiation Mutagenesis 500

More-Complex Lesions as Premutagenic Lesions 502

Model for the Molecular Mechanism of SOS Mutagenesis 503

Experiments Involving UV Irradiation plus Photoreversal 503

Premutagenic Lesions on the Lagging versus the Leading Strand May Influence the Probability of a Mutation 505

Biochemical Mechanism of SOS Mutagenesis 505

SOS-Dependent Mutagenesis in Cells Not Exposed to Exogenous DNA-Damaging Agents 507

The SOS Mutator Effect on Chromosomal Loci or on an F' Plasmid 508

The SOS Mutator Effect on Single- and Double-Stranded Phages 509

What Is the Biological Purpose of SOS Mutagenesis? 510

SOS-Independent Mutagenesis 510

Mutations Arising in Cell Populations That Are Not Actively Dividing 512

12 | DNA Damage Tolerance and Mutagenesis in Eukaryotic Cells 523

DNA Damage-Induced Mutagenesis in the Yeast

Saccharomyces cerevisiae 524

The Genetic Framework 524

Timing and Regulation of UV Radiation-Induced Mutagenesis 529

Contributions from Mutational Spectra 532

Untargeted Mutagenesis in Yeast Cells Exposed to DNA Damage 534

Summary and Conclusions 535

DNA Damage-Induced Mutagenesis in Mammalian Cells 536

Genetic Control 536

Replicational Bypass of UV Radiation Lesions 537

Inducibility of Mutagenic Processes in Mammalian Cells? 541

Mutational Specificity of UV-Induced Lesions 544

Summary and Conclusions 554

DNA Strand Break Repair and Recombination in

S. cerevisiae 555

DNA Strand Breaks and Their Repair after Treatment with Ionizing Radiation 555

The Genetic Framework	557
Strand Exchange Proteins	562
Intrachromosomal Recombination and the Role of the <i>RAD1/RAD10</i> Nuclease	562
Illegitimate Recombination	565
Recombination in the Cellular Context	566

DNA Strand Break Repair and Recombination in Mammalian Cells 567

The Genetic Framework	567
Repair of Localized Double-Strand Breaks: V(D)J Recombination	569
Mammalian Proteins Possibly Involved in Recombination	573
Illegitimate Recombination and DNA End Joining	574
UV Radiation-Stimulated Recombination	575
Summary and Conclusions	576

13 | Regulatory Responses to DNA-Damaging Agents in Eukaryotic Cells 595

Gene Activation following Exposure to DNA-Damaging Agents 595

Induction of Genes in <i>Saccharomyces cerevisiae</i>	595
Gene Activation in Mammalian Cells following Exposure to DNA-Damaging Agents	601

Cell Cycle Arrest as a Response to DNA Damage 607

Regulation of Cell Cycle Progression	607
G ₂ Arrest in the Presence of DNA Damage: the <i>S. cerevisiae</i> <i>RAD9</i> Gene as a Paradigm	608
G ₂ Checkpoint Control in <i>S. pombe</i>	609
G ₂ Checkpoint Control in Mammalian Cells	611
G ₁ and G ₁ /S Arrest	611
The <i>p53</i> Gene and Its Role in the Cell Cycle	613

Programmed Cell Death (Apoptosis) 618

Potential Signaling Enzymes	619
Summary and Conclusions	621

14 | Human Hereditary Diseases with Defective Processing of DNA Damage 633

Hereditary Diseases Characterized by Defective DNA Repair 634

Xeroderma Pigmentosum	634
Trichothiodystrophy	649
Cockayne's Syndrome	655
Fanconi's Anemia	658

Hereditary Diseases Characterized by Defective Cellular Responses to DNA Damage 662

Ataxia Telangiectasia (Louis-Bar Syndrome)	662
Bloom's Syndrome	668
A Clinical Syndrome That Yielded the 46BR Cell Line	670

Miscellaneous Diseases with Possible Defects in the Processing of Damaged DNA 671
