Preface V

List of Contributors XVII

Prologue: An Overview of Protein Modular Domains as Adaptors I
Sir Tom L. Blundell

- 1 The SH2 Domain: a Prototype for Protein Interaction Modules 5**
Tony Pawson, Gerald D. Gish, and Piers Nash
- 1.1 The Multidomain Nature of Signaling Proteins and Identification of the SH2 Domain 5
- 1.2 SH2 Domains as a Prototype for Interaction Domains 9
- 1.3 Structure and Binding Properties of SH2 Domains 9
- 1.4 Different Modes of SH2 Domain–Phosphopeptide Recognition 12
- 1.5 Signaling Pathways and Networks 14
- 1.6 Plasticity of SH2 Domains 17
- 1.7 SH2 Domain Dimerization 19
- 1.8 Tandem SH2 Domains 20
- 1.9 Composite and Complex Interaction Domains 21
- 1.10 Allosteric Regulation 21
- 1.11 SH2 Domains and Disease 24
- 1.12 Summary 26
- References 27*
- 2 SH3 Domains 37**
Bruce J. Mayer and Kalle Saksela
- 2.1 Brief Overview 37
- 2.2 Historical Perspective 39
- 2.2.1 Genetics to the Rescue 40
- 2.2.2 Structure and Specificity 41
- 2.3 Predicting Binding Partners 44
- 2.3.1 Core Peptide Docking vs. Extended Interactions 46

2.3.2	Atypical SH3 Docking Motifs	49
2.4	Experimental Exploitation of SH3 Specificity	52
2.5	Conclusion	54
	<i>References</i>	55
3	The WW Domain	59
	<i>Marius Sudol</i>	
3.1	Introduction and Brief History of Module Discovery	59
3.2	Structure of the WW Domain–Ligand Complex	60
3.3	WW Domains and Human Diseases	62
3.3.1	From Liddle's Syndrome to Liddle's Disease	62
3.3.2	Amyloid Precursor Protein: APP and FE65	63
3.3.3	Dystrophin WW Domain and Muscular Dystrophy	64
3.4	Emerging Directions and Recent Developments	65
3.4.1	AxCel's Map	65
3.4.2	ErbB4 Receptor Protein–Tyrosine Kinase and its WW Domain-containing Adaptor, YAP	65
3.4.3	Membrane Proteins with PPxYs Implicated in Cancer	67
3.5	Concluding Remarks	67
	<i>References</i>	69
4	EVH1/WH1 Domains	73
	<i>Linda J. Ball, Urs Wiedemann, Jürgen Zimmermann, and Thomas Jarchau</i>	
4.1	Introduction	73
4.2	Occurrence and Distribution of EVH1 Domains	74
4.2.1	Proteins Containing EVH1 Domains	77
4.2.2	Modular Architecture of EVH1-containing Proteins: Domain Location, Domain Combinations, and Copy Number	80
4.2.3	Classification of EVH1 Domains	82
4.3	Structures of EVH1 Domains and Their Complexes	83
4.3.1	High-resolution Structures of EVH1 and Related Domains	83
4.3.2	Structures of EVH1 Complexes and Determinants of Ligand Specificity	86
4.3.3	Comparisons with RanBDs, PTB Domains, and PH Domains	90
4.4	Biological Function and Signaling Pathways Involving EVH1 Domains	91
4.4.1	Ena/VASP Interactions	91
4.4.2	Homer/Vesl Interactions	92
4.4.3	WASP/N-WASP Interactions	92
4.4.4	Spred Interactions	93
4.5	Emerging Research Directions and Recent Developments	94
4.5.1	Use of Sequence and Structural Data in Prediction of Binding Partners	94

4.5.2	Use of Structural Data from Complexes to Guide the Rational Design of New Ligands	94
4.6	Concluding Remarks	95
	<i>References</i>	96
5	The GYF Domain	103
	<i>Christian Freund</i>	
5.1	Introduction	103
5.2	Structure of the CD2BP2-GYF Domain and Its Interaction with the CD2 Signaling Peptide SHRPPPPGHRV	105
5.3	Molecular and Signaling Function of GYF Domains	107
5.3.1	Sequence Specificity of the CD2BP2 GYF Domain	107
5.3.2	Spliceosomal Proteins Contain Binding Motifs for CD2BP2-GYF	108
5.3.3	Phage Display of CD2BP2-GYF	108
5.3.4	Sequence Repetition in GYF Domain-mediated Interactions	109
5.3.5	Functional Relevance of the CD2BP2-GYF Domain Interaction with CD2	110
5.3.5.1	Competitive Binding of CD2BP2-GYF and Fyn-SH3 to the CD2 Tail in Vitro	110
5.3.5.2	In Vivo Compartmentalization of CD2 Binding Proteins	111
5.3.6	Other GYF Domain-Containing Proteins	112
5.4	Emerging Research Directions and Recent Developments	113
5.5	Concluding Remarks	114
	<i>References</i>	115
6	PTB Domains	117
	<i>Ben Margolis and Linton M. Traub</i>	
6.1	Introduction	117
6.2	Function of PTB Domain Proteins	118
6.2.1	Role of PTB Domain Proteins in Tyrosine Kinase Signaling	119
6.2.1.1	Shc	119
6.2.1.2	Proteins with PTBI Domains	119
6.2.1.3	Additional PTB Domain Proteins Involved in Tyrosine Kinase Signaling	121
6.2.2	PTB Domain Proteins That Function Independent of Phosphotyrosine	122
6.2.2.1	PTB Domain Proteins That Bind APP	122
6.2.2.2	PTB Domain Proteins That Bind Integrins	124
6.2.2.3	PTB Domain Proteins That Control Endocytosis	125
6.3	PTB Domain Structure	127
6.3.1	Broad Binding Specificity	129
6.3.2	Diverse Modes of Engagement	130
6.3.3	Phospholipid Binding	132
6.4	Conclusions	132
	<i>References</i>	133

7 The FHA Domain 143

Daniel Durocher

- 7.1 Introduction 143
- 7.2 FHA Domain Structure 147
 - 7.2.1 Topology 147
 - 7.2.2 FHA–Phosphopeptide Interaction 149
 - 7.2.3 A Second Binding Interface? 150
 - 7.2.4 The FHA Domain is Part of a Domain Superfamily 151
- 7.3 Molecular and Signaling Function 152
 - 7.3.1 FHA Domain Can Regulate Protein Localization 152
 - 7.3.2 FHA Domain Binding to Enzyme Substrates 152
 - 7.3.3 FHA Domain Binding to Regulators 153
 - 7.3.4 Reversible Protein–Protein Interactions 153
 - 7.3.5 FHA Domain as a Transcriptional Activator Domain 154
- 7.4 Emerging Research Direction 155
 - 7.4.1 Bacterial FHA Domains 155
 - 7.4.2 A Potential Role for FHA Domains During Innate Immunity? 156
 - 7.4.3 FHA Domain and Phosphothreonine-Proline Motifs 156
 - 7.4.4 FHA Domain Chimeras as Phosphorylation Biosensors 157
- 7.5 Concluding Remarks 158
- References 159*

8 Phosphoserine/Threonine Binding Domains 163

Andrew E. H. Elia and Michael B. Yaffe

- 8.1 Introduction 163
- 8.2 The 14-3-3 Proteins 164
 - 8.2.1 History and Functions 164
 - 8.2.2 Structure and Binding 165
- 8.3 WW Domains 167
- 8.4 FHA Domains 168
- 8.5 WD40 Repeats of F-box Proteins 170
- 8.6 Polo-box Domains 172
- 8.7 Conclusions and Future Directions 174
- References 175*

9 The Eukaryotic Protein Kinase Domain 181

Arvin C. Dar, Leanne E. Wybenga-Groot, and Frank Sicheri

- 9.1 Introduction 181
- 9.2 Architecture of the Kinase Domain 181
 - 9.2.1 ATP Binding Pocket 183
 - 9.2.2 Peptide Binding and Catalytic Residues 184
- 9.3 Catalytic Switching Mechanisms 185
 - 9.3.1 Kinase Regulation by the A Loop 185

9.3.2	Regulation of Catalysis by Elements External to the Kinase Domain	187
9.3.2.1	Pseudosubstrate Regulation	188
9.3.2.2	Receptor Tyrosine Kinase Regulation by the Juxtamembrane Region	190
9.3.2.3	Intramolecular Regulation Involving Autonomously Folded Domains	191
9.4	Protein Kinase Substrate Recognition	193
9.4.1	Canonical Peptide Substrate Recognition	193
9.4.2	'Phospho-priming'-Dependent Substrate Recognition	195
9.4.3	Regulation of AGC Kinases by the Hydrophobic Motif	196
9.4.4	CDK-Cyclin Interactions with Substrates Mediated through the CY Motif	198
9.4.5	MAPK Docking Site Interactions: Common Recognition Mechanisms for Substrates, Activators, and Scaffolds	198
9.4.6	Substrate Recognition through a Phosphorylated Epitope in TGF β	199
9.4.7	Substrate Recognition by the eIF2 α Protein Kinases: Recognition of a Complex Epitope Presented by Globular Fold	200
9.5	Conclusions	201
	References	201
10	Structure, Specificity, and Mechanism of Protein Lysine Methylation by SET Domain Enzymes	211
	<i>James H. Hurley and Raymond C. Trievel</i>	
10.1	Discovery and Biology of SET Domains	211
10.2	Structure of the SET Domain	212
10.2.1	The SET Domain Fold	213
10.2.2	The Active Site	214
10.2.3	Interactions with Other Domains	215
10.3	Substrate Specificity and Catalytic Mechanism	217
10.3.1	Substrate Specificity	217
10.3.2	Catalytic Mechanism	219
10.3.3	Methylation Multiplicity	221
10.4	Emerging Directions and Conclusions	221
	References	222
11	The Structure and Function of the Bromodomain	227
	<i>Kelley S. Yan and Ming-Ming Zhou</i>	
11.1	Introduction	227
11.2	The Bromodomain Structure	229
11.3	The Bromodomain as an Acetyl-lysine Binding Domain	230
11.3.1	Acetyl-lysine Binding	230
11.3.2	Molecular Determinants of Ligand Specificity	232
11.4	Emerging Developments	234
11.5	Concluding Remarks	235
	References	236

12	Chromo and Chromo Shadow Domains	241
	<i>Joel C. Eissenberg and Sepideh Khorasanizadeh</i>	
12.1	Introduction and Brief History of the Module's Discovery	241
12.2	Structures of the Chromo and Chromo Shadow Domains	242
12.3	Function of the Chromo Domain	246
12.4	Genetic, Cytological, and Molecular Properties of the Chromo Domain	248
12.5	Emerging Research Directions and Recent Developments	250
	<i>References</i>	251
13	PDZ Domains: Intracellular Mediators of Carboxy-terminal Protein Recognition and Scaffolding	257
	<i>Laurence A. Lasky, Nicholas J. Skelton, and Sachdev S. Sidhu</i>	
13.1	Introduction	257
13.2	Structural Analysis of PDZ Domains	259
13.3	Analysis of PDZ Domain–Ligand Interactions with Mutagenesis and Synthetic Peptides	261
13.4	Molecular and Signaling Functions of PDZ Domains	263
13.4.1	INAD as a Molecular Scaffold	263
13.4.2	LIN-7–Receptor Tyrosine Kinase Interactions and Subcellular Localization	265
13.4.3	PDZ Domain Proteins and Epithelial Polarity Induction and Maintenance	267
13.4.4	A Few Miscellaneous Examples: The Synapse, Disheveled, CARD MAGUKs, and Beta Adrenergic Receptors	269
13.5	Concluding Remarks	272
	<i>References</i>	273
14	EH Domains and Their Ligands	279
	<i>Brian K. Kay, Michael D. Scholle, and Fred J. Stevens</i>	
14.1	Introduction	279
14.2	EH Domain-containing Proteins	279
14.3	Peptide Ligands	282
14.4	Cellular Ligands	284
14.5	Structures of the Domain and Its Ligands	285
14.6	Evolutionary Origins of the EH Domain	286
14.7	Functions of the EH Domain	288
	<i>References</i>	289

15	Ubiquitin Binding Modules:	
	The Ubiquitin Network Beyond the Proteasome	291
	<i>Stefano Confalonieri and Pier Paolo Di Fiore</i>	
15.1	Introduction: The Ubiquitin System in Proteolysis and Beyond	291
15.2	CUE and UBA Domains	293
15.3	The Ubiquitin-interacting Motif	299
15.4	The UEV Domain	302
15.5	The PAZ and NZF Domains	305
15.6	Ubiquitin-based Networks	308
15.7	Conclusions	312
	<i>References</i>	313
16	The Calponin Homology (CH) Domain	321
	<i>Mario Gimona and Steven J. Winder</i>	
16.1	Introduction and Brief History	321
16.2	Structure of the Domain – The CH Domain Fold	323
16.2.1	Structures of Single CH Domains	325
16.2.2	Structures of Tandem CH Domains	325
16.3	Molecular and Signaling Function	326
16.3.1	Actin-binding Domains	326
16.3.2	Single EB-type CH Domains Function as Microtubule Anchors	327
16.3.3	Kinases, Phospholipids, and Other Cytoskeletal Components	328
16.3.4	CH Domain-containing Proteins and Human Diseases	330
16.3.4.1	The Dystrophin ABD and Muscular Dystrophy	330
16.3.4.2	The Filamin ABD and Otopalatodigital Syndromes	330
16.3.4.3	The α -Actinin ABD and Glomerulosclerosis	330
16.3.4.4	The β -Spectrin ABD and Spherocytosis	331
16.4	Emerging Research Directions and Recent Developments	331
16.5	Concluding Remarks	332
	<i>References</i>	332
17	PH Domains	337
	<i>Mark A. Lemmon and David Keleti</i>	
17.1	Introduction	337
17.2	PH Domain Structure and Phosphoinositide Binding	338
17.2.1	Overall Structure – The PH Domain Fold	338
17.2.2	Structural Basis for Phosphoinositide Binding	340
17.2.2.1	High-affinity PtdIns(4,5)P ₂ Binding	340
17.2.2.2	Low-affinity PtdIns(4,5)P ₂ Binding	340
17.2.2.3	Specific Recognition of Phosphoinositide 3-Kinase Products	341
17.2.2.4	PH Domains with Other Phosphoinositide-binding Specificities	345
17.2.2.5	Sequence Predictors of Phosphoinositide Binding	345
17.3	Molecular and Signaling Function of PH Domains	346

17.3.1	PH Domains as Phosphoinositide-dependent Membrane-targeting Domains	346
17.3.1.1	PtdIns(4,5)P ₂ -specific PH Domains	347
17.3.1.2	PI 3-kinase Product-binding PH Domains	348
17.3.1.3	Membrane Targeting by PH Domains with Little Phosphoinositide-binding Specificity	349
17.3.2	Function of Low-affinity PH Domains That Are Not Independently Membrane Targeted	350
17.3.2.1	The Dynamin PH Domain	351
17.3.2.2	PH Domains of Dbl-family Proteins	351
17.3.3	Protein Targets of PH Domains	353
17.3.3.1	Small GTPases as PH Domain Targets	353
17.3.3.2	Other Protein Targets of PH Domain Targets	354
17.4	Emerging Research Directions and Recent Developments	356
	References	357
18	ENTH and VHS Domains	365
	<i>Vimal Parkash, Olli Lohi, Ismo Virtanen, and Veli-Pekka Lehto</i>	
18.1	Introduction	365
18.2	History of ENTH	366
18.3	Structure of ENTH Domains	369
18.4	Signaling and Molecular Functions of ENTH	371
18.5	History of VHS	374
18.6	Structure of VHS Domains	375
18.7	Function of GGA-VHS Domains	377
18.8	Function of Non-GGA VHS Domains	379
18.9	Involvement of ENTH and VHS Domains in Human Disease	380
18.10	Emerging Research Directions	380
18.11	Concluding Remarks	382
	References	382
19	PX Domains	389
	<i>Matthew L. Cheever and Michael Overduin</i>	
19.1	Introduction and History of the PX Domain Discovery	389
19.2	Structure of the PX Domain	392
19.2.1	Mechanism of PtdIns(3)P Coordination	394
19.3	Biological Function of the PX Domain	397
19.3.1	PI Binding Specificity	397
19.3.2	Synergistic Phospholipid Interactions	398
19.3.3	Membrane Insertion	398
19.3.4	Regulatory Protein Interactions	399
19.3.5	Signaling Pathways of the PX Proteins	400
19.4	Emerging Research Directions and Recent Developments	403
	References	404
