Foreword, vii

Joshua Lederberg

Contributors, xix

1. The Bacterium's Place in Nature, 3

Jan Sapp

2. The Large-Scale Structure of the Tree of Life, 53

Norman R. Pace

3. The Molecular Phylogeny of Bacteria Based on Conserved Genes, 70

Wolfgang Ludwig and Karl-Heinz Schleifer

4. Evolving Biological Organization, 99

Carl Woese

5. If the Tree of Life Fell, Would It Make a Sound?, 119

W. Ford Doolittle

6. Woe Is the Tree of Life, 134

William Martin

7. The Robustness of Intermediary Metabolism, 154

Harold J. Morowitz, Daniel Broyles, and Howard Lasus

8. Molecular Sequences and the Early History of Life, 160
Radhey Gupta
9. Fulfilling Darwin's Dream, 184
James Lake, Jonathan E. Moore, Anne Simonson, and Maria C. Rivera
10. Paradigm Lost, 207
C. G. Kurland
11. Contemporary Issues in Mitochondrial Origins and Evolution, 224
Michael W. Gray
12. On the Origin and Evolution of Plastids, 238
John M. Archibald and Patrick J. Keeling
13. The Karyomastigont Model of Eukaryosis, 261
Hannah Melnitsky, Frederick A. Rainey, and Lynn Margulis
14. The Missing Piece: The Microtubule Cytoskeleton and the Origin
of Eukaryotes, 281
Michael F. Dolan
15. Heritable Microorganisms and Reproductive Parasitism, 290
John H. Werren
- Index, 317
