

Contents

Preface	v
Ultrafast Kinetic Studies and the Protein Folding "Speed Limit" <i>Jan Kubelka, Marco Buscaglia, James Hofrichter and William A. Eaton</i>	1
Protein Folding: Thermodynamic and Kinetic Aspects <i>Alexei V. Finkelstein</i>	11
NMR Studies of Protein Complexes <i>Angela M. Gronenborn</i>	43
Bayesian Restraint Potentials for Consistent Inference of Biomolecular Structure from NMR Data <i>Jeffrey C. Hoch and Alan S. Stern</i>	53
Molecular Dynamics Simulations of Yeast Chorismate Mutase. Substrate Conformational Transitions and Enzymatic Catalysis <i>Hong Guo, William N. Lipscomb, Qiang Cui and Martin Karplus</i>	63
Using NMR to Study Large RNAs: Case Study of the HCV IRES <i>Insil Kim, Peter J. Lukavsky, Geoff Otto, Corey Liu and Joseph D. Puglisi</i>	75
Recognition, Autocatalysis and Amplification <i>Julius Rebek, Jr.</i>	91
Novel Insights into the Mechanism of Retinol Binding by Cellular Retinol-Binding Protein <i>Tanja Mittag, Lorella Franzoni, Davide Cavazzini, Gian Luigi Rossi and Ulrich L. Günther</i>	107
Molecular Dynamics Simulations <i>Konstantin V. Shaitan</i>	121
Exploring Cardiac Troponin Interactions with ¹⁵ N-HSQC NMR Spectroscopy <i>Darrin A. Lindhout, Xu Wang and Brian D. Sykes</i>	147
X-Ray Structure and Function Study of the Ribosome <i>Marat Yusupov</i>	157
Course Abstracts	177
Course Posters	185
Author Index	189
