Preface	xvi
1 Transgene silencing	1
ANN DEPICKER, MATTHEW SANDERS and PETER MEYER	
1.1 Introduction: variation of transgene expression	1
1.2 Molecular mechanisms of transgene silencing	2
1.2.1 Transcriptional silencing	2
1.2.1.1 Chromatin remodelling	2
1.2.1.2 DNA methylation	3
1.2.1.3 Interactions between DNA and histone methylation functions	4
1.2.1.4 RNA signals for transcriptional silencing	4
1.2.1.5 RNA-independent chromatin modification	5
1.2.2 Posttranscriptional silencing with different RNA degradation pathways	5
1.2.2.1 Initiation	6
1.2.2.2 Sequence-specific degradation of single-stranded target RNAs	7
1.2.2.3 RNA-dependent RNA polymerases involved in signal generation and amplification	8
1.2.2.4 Transitive silencing	9
1.2.2.5 The role of DNA methylation and chromatin modification in RNA silencing	11
1.3 Systemic silencing	12
1.4 Silencing signals	13
1.4.1 The transgene construct	14
1.4.2 The impact of the transgene locus structure	15
1.4.3 RNA silencing induced by constructs carrying inverted repeats (sequence homology and repeats)	17
1.5 Position effects	17
1.6 Environmental effects	19

1.7	Strategies for the prevention of transgene silencing	21
1.7.1	Selection of single-copy transgenes with no rearrangement	21
1.7.2	Selection of favourable integration regions	22
1.7.3	Reactivation of silent transgenes	22
1.7.4	Scaffold/matrix attachment regions	22
1.7.5	The use of silencing mutants	23
1.7.6	Targeted integration of transgenes	23
1.8	Conclusions	25
2	RNA interference: double-stranded RNAs and the processing machinery	33
	JAN M. KOOTER	
2.1	Introduction	33
2.2	Mechanism of RNA interference	34
2.3	Sources of dsRNA	36
2.3.1	Transgene-encoded dsRNA	37
2.3.2	Fortuitous synthesis of transgene dsRNA	37
2.3.3	Regulated and inducible RNAi	40
2.3.4	Viral dsRNA and virus-induced gene silencing	41
2.3.5	Endogenous dsRNAs	43
2.4	The protein machinery of RNAi	44
2.4.1	Double-stranded RNA-processing enzymes: the DCLs	44
2.4.1.1	What is known about plant DCLs?	47
2.4.2	DCL activities and the production of different size classes of siRNA	49
2.4.3	Argonaute proteins/PAZ and PIWI domain (PPD) proteins	50
2.4.3.1	The PAZ domain	51
2.4.3.2	The PIWI domain	51
2.4.4	More about plant Argonautes	53
2.4.5	RNA-dependent RNA polymerases	55
2.4.5.1	RDR1 and RDR6: virus-induced RNAi and S-PTGS	56
2.4.5.2	RDR2: a role in epigenetics	57
2.4.5.3	Biochemical properties of RDRs	57
2.4.5.4	RDR activity: amplification and transitive RNAi	58

3 RNA-directed DNA methylation	69
MARJORI MATZKE, TATSUO KANNO, BRUNO HUETTEL, ESTELLE JALIGOT, M. FLORIAN METTE, DAVID P. KREIL, LUCIA DAXINGER, PHILIPP ROVINA, WERNER AUFSATZ and ANTONIUS J. M. MATZKE	
3.1 Introduction	69
3.1.1 RNA interference	69
3.1.2 Discovery and characteristics of RNA-directed DNA methylation	70
3.2 RNAi-mediated pathways in the nucleus	71
3.2.1 RNAi-mediated heterochromatin formation	72
3.2.2 RdDM and RNAi-mediated heterochromatin assembly: one pathway or two?	73
3.3 Mechanism of RNA-directed DNA methylation: RNA and protein requirements	76
3.3.1 Systems used for genetic analyses of RdDM and transcriptional silencing	76
3.3.2 Steps in the RdDM pathway	78
3.3.2.1 Double-stranded RNA synthesis and processing	78
3.3.2.2 DNA methyltransferases and histone-modifying enzymes	82
3.3.2.3 SNF2-like chromatin remodeling ATPases and DNA methylation	86
3.4 RdDM in other organisms	90
3.4.1 Pattern of methylation	90
3.4.2 RdDM machinery	91
3.4.3 RNA-directed DNA methylation of promoters in human cells	92
3.5 How short RNAs interact with a target locus: RNA–DNA or RNA–RNA?	94
3.6 Functions of RNA-directed DNA methylation: genome defense, development, others?	95
3.7 Concluding remarks	96
4 Heterochromatin and the control of gene silencing in plants	106
G. REUTER, A. FISCHER and I. HOFMANN	
4.1 Introduction	106
4.2 Cytological, molecular and genetic characteristics of heterochromatin in plants	107
4.2.1 Discovery of heterochromatin and defining its cytological characteristics	107

4.2.2	Sequence content, chromosomal and genomic organisation of heterochromatin	110
4.2.3	Heterochromatin and genetic recombination	112
4.2.4	Heterochromatin and gene silencing in position effect variegation	113
4.2.5	Transcriptional gene silencing by heterochromatisation	113
4.3	DNA and histone modification in plant heterochromatin	117
4.3.1	SUVH proteins and the control of heterochromatic chromatin domains	117
4.3.2	DNA methylation and the epigenetic control of heterochromatic domains	120
4.3.3	Interdependence of heterochromatic DNA and histone methylation	122
4.4	Epigenetic inheritance in plants and heterochromatin	124
5	When alleles meet: paramutation	134
	MARIEKE LOUWERS, MAX HARING and MAIKE STAM	
5.1	Introduction	134
5.2	Paramutation across kingdoms	137
5.2.1	Paramutation in plants	137
5.2.1.1	Paramutation at the <i>b1</i> locus in maize	137
5.2.1.2	Paramutation at the <i>pl1</i> locus in maize	138
5.2.1.3	Paramutation at the <i>sulfurea</i> locus in tomato	139
5.2.1.4	Paramutation at the transgenic <i>A1</i> locus in petunia	140
5.2.1.5	<i>Trans</i> -inactivation at the <i>PAI</i> loci in <i>Arabidopsis</i>	141
5.2.2	Paramutation in mammals and fungi	142
5.2.2.1	<i>LoxP trans</i> -silencing in mice	142
5.2.2.2	<i>Trans</i> -nuclear inactivation of the <i>infl</i> gene in <i>Phytophthora infestans</i>	143
5.2.2.3	Interchromosomal DNA methylation transfer in <i>Ascoibolus immerses</i>	143
5.3	Paramutation models	144
5.3.1	RNA-based model	144
5.3.1.1	Silencing by dsRNA and siRNAs	145
5.3.1.2	Silencing by long RNAs	145
5.3.1.3	RNA involvement in paramutation	145
5.3.2	Pairing-based model	146
5.3.3	Combined model	148

5.4	Common features of paramutation phenomena	148
5.4.1	Involvement of repeats	148
5.4.1.1	Paramutation induced by repeats	149
5.4.1.2	Paramutation induced by single-copy sequences	151
5.4.2	Sequence requirements for paramutation	151
5.4.3	Involvement of DNA methylation and chromatin structure	152
5.4.4	Secondary paramutation	153
5.4.5	Stability of the epigenetic state	153
5.4.6	Timing of paramutation	155
5.5	<i>Trans</i> -acting mutations affecting paramutation	157
5.5.1	Maize mutations affecting paramutation	157
5.5.2	Arabidopsis mutations affecting <i>trans</i> -inactivation	162
5.6	The possible roles and implications of paramutation	163
5.7	Concluding remarks and future directions	164
6	Genomic imprinting in plants: a predominantly maternal affair	174
	UELI GROSSNIKLAS	
6.1	Introduction	174
6.2	Plant reproduction	174
6.2.1	Gametogenesis and double fertilization	175
6.2.2	Seed development	175
6.3	The nature of genomic imprinting	177
6.3.1	Parental effects and the discovery of genomic imprinting	177
6.3.2	Genomic imprinting and gene dosage effects	178
6.3.3	Genomic imprinting and asymmetry of parental gene activity	180
6.4	Imprinted genes in <i>Zea mays</i> and <i>Arabidopsis thaliana</i>	182
6.4.1	Imprinted genes and potentially imprinted genes in maize	182
6.4.2	The FIS class of genes in <i>Arabidopsis</i>	183
6.4.3	The MEA-FIE Polycomb group complex	184
6.4.4	Imprinted genes and potentially imprinted genes in <i>Arabidopsis</i>	185
6.4.5	Genomic imprinting in embryo and endosperm	186
6.5	Molecular mechanisms of genomic imprinting	188
6.5.1	<i>Trans</i> -acting factors affecting imprinting	188

6.5.2	<i>Cis</i> -acting elements involved in imprinting	191
6.6	Role of imprinting in plant development and evolution	192
7	Nucleolar dominance and rRNA gene dosage control: a paradigm for transcriptional regulation via an epigenetic on/off switch	201
	NUNO NEVES, WANDA VIEGAS and CRAIG S. PIKAARD	
7.1	Introduction	201
7.2	Ribosomal RNA gene dosage control	203
7.3	Nucleolar dominance	205
7.4	DNA methylation and rRNA gene regulation	206
7.5	Histone modifications and rRNA gene regulation	208
7.5.1	Histone acetylation	208
7.5.2	Histone methylation	209
7.6	Concerted changes in DNA and histone methylation comprise an on/off switch	211
7.7	Future studies: identifying genes required for the epigenetic on/off switch	213
8	Virus-induced gene silencing	223
	TAMAS DALMAY	
8.1	Introduction	223
8.1.1	Transgene-triggered gene silencing targets viruses	223
8.1.2	Viruses trigger PTGS	224
8.1.3	Systemic silencing	225
8.2	Virus-induced gene silencing	227
8.2.1	Mechanism of virus-induced gene silencing	227
8.2.2	Virus vectors for gene silencing	229
8.2.3	Transgenic virus-induced gene silencing	230
8.2.4	Application of virus-induced gene silencing	231
8.2.4.1	Identification of gene function	231
8.2.4.2	Analysing the function of disease resistance genes	231
8.3	Viral suppressors of gene silencing	234
8.3.1	Characterisation of P19 and HcPro	235
8.3.2	Suppressors break pathogen-derived resistance	236
8.3.3	Application of viral suppressors of gene silencing	236
8.3.3.1	Analysing the silencing machinery	237
8.3.3.2	Overexpression of proteins	237

9 MicroRNAs: micro-managing the plant genome	244
SANDRA K. FLOYD and JOHN L. BOWMAN	
9.1 Abstract	244
9.2 Discovery of miRNAs	244
9.3 miRNAs versus siRNAs	245
9.4 Biogenesis of miRNAs: pri-miRNA, pre-miRNA, mature miRNAs	246
9.5 miRNA nomenclature	248
9.6 Modes of gene regulation by miRNAs: translation versus mRNA cleavage versus chromatin	248
9.7 miRNAs and their targets	251
9.8 Functional characterization of miRNAs – case studies	255
9.8.1 miR165/166 and Class III HD-Zip genes	255
9.8.2 miR319/JAW and TCP genes	258
9.8.3 miR159 and MYB genes	259
9.8.4 miR164 and CUC-like NAC genes	259
9.8.5 miR172 and AP2 and related genes	260
9.8.6 miR170/171 and HAM-like GRAS genes	261
9.8.7 miR168 and ARGONAUTE1 and miR162 and DICER-LIKE1	262
9.8.8 Summary	263
9.9 Evolution of miRNA-mediated gene regulation	264
9.9.1 Within the plant kingdom	264
9.9.2 miRNAs in plants versus metazoans	266
