

Contents

Chapter 1	Variability and uncertainty in crop-to-wild hybridization.....	1
<i>Terrie Klinger</i>		
Chapter 2	Factors affecting the spread of resistant <i>Arabidopsis thaliana</i> populations	17
<i>Joy Bergelson and Colin B. Purrington</i>		
Chapter 3	<i>Bt</i> -Crops: Evaluating benefits under cultivation and risks from escaped transgenes in the wild.....	33
<i>Deborah K. Letourneau, Joy A. Hagen, and Gaden S. Robinson</i>		
Chapter 4	Resisting resistance to <i>Bt</i> -corn.....	99
<i>David A. Andow</i>		
Chapter 5	Ecological risks of transgenic virus-resistant crops.....	125
<i>Alison G. Power</i>		
Chapter 6	Impacts of genetically engineered crops on non-target herbivores: <i>Bt</i> -corn and monarch butterflies as a case study.....	143
<i>John E. Losey, John J. Obrycki, and Ruth A. Hufbauer</i>		
Chapter 7	Transgenic host plant resistance and non-target effects	167
<i>Angelika Hilbeck</i>		
Chapter 8	Release, persistence, and biological activity in soil of insecticidal proteins from <i>Bacillus thuringiensis</i>	187
<i>Guenther Stotzky</i>		
Chapter 9	Survival, persistence, transfer: The fate of genetically modified microorganisms and recombinant DNA in different environments	223
<i>Beatrix Tappeser, Manuela Jäger, and Claudia Eckelkamp</i>		
Chapter 10	The spread of genetic constructs in natural insect populations.....	251
<i>Henk R. Braig and Guiyun Yan</i>		
Chapter 11	Ecological and community considerations in engineering arthropods to suppress vector-borne disease.....	315
<i>Andrew Spielman, John C. Beier, and Anthony E. Kiszewski</i>		
Chapter 12	Environmental risks of genetically engineered vaccines.....	331
<i>Terje Traavik</i>		
Chapter 13	Methods to assess ecological risks of transgenic fish releases	355
<i>William M. Muir and Richard D. Howard</i>		
Chapter 14	Controversies in designing useful ecological assessments of genetically engineered organisms	385
<i>Anne R. Kapuscinski</i>		
Index.....		417
