

CONTENTS

SECTION - I MICROTECHNIQUE

1. **Introduction & Importance of Microtechnique** 3 - 7
Introduction , Desirable properties of micropreparations, Main objectives, Methods of preparation of tissues for study of i- Whole mount ii- Tissues in isolated condition: Teasing, Maceration & corrosion, iii- Cells in isolated condition; Smear, Squash, Impression films, iv- Histology, Importance of Microtechnique.
2. **Fixation** 8 - 19
Introduction, Aims and objectives, Theory of fixation, Classification of fixatives, Preparation of a fixative, Effects of fixation, Types of fixatives & Methods of fixation, Composition & properties of fixatives , Precautions, Post - fixation treatment - Wetting, rinsing, immersion and washing.
3. **Dehydration** 20 - 25
Introduction, Dehydrating agents, Significance of using graded alcohol , Procedure of Dehydration, Advantages of the graded series of alcohol , Precautions.
4. **Clearing** 26 - 29
Introduction, Merits and demerits of different clearing agents, Xylene , benzene & toluene , Cedar- wood oil & clove oil , Organic solvents.
5. **Emedding** 30 - 34
Introduction, Necessity for embedding , Selection of embedding mass , Paraffin Embedding, Procedure , Advantages and Disadvantages of using paraffin as an embedding mass, Celloidin Embedding, Double embedding.
6. **Block Making** 35 - 41
Introduction, Requirements, Procedure, Orientation of the object, Cooling of the entire mass, Precautions, Difficulties & Remedies during casting , Labelling & Storing of the Blocks, Advantages of preparation of blocks in paraffin.
7. **Microtome** 42 - 49
Introduction, Types of microtomes, Construction and Working of Rotary Microtome and Rocking Microtome, Microtome accessories, Types of knives, Honing and Stropping of knife, Use and care of Microtome.
8. **Section Cutting** 50 - 61
Introduction , Requirements for section cutting , Trimming of the Block , Mounting of the Block, Procedure of section cutting, Factors affecting section cutting, Do's and Don'ts of section cutting , Problems encountered during section cutting, possible causes and remedies to overcome the problems.

- 9. Staining** 62 - 77
Introduction, Types of Stains, Natural and synthetic Stains, Theories of Staining, Factors affecting Staining, Methods of Staining, Double Staining with Haematoxylin and Eosin, Requirements, Procedure, Mounting, Mounting media, Triple staining methods.
- 10. Histochemistry** 78 - 85
Introduction, Histochemical Methods, Histochemical techniques for staining proteins - Mercuric Bromophenol - Blue Method, Histochemical techniques for the demonstration of carbohydrates - PAS method, Histochemical techniques for the demonstration of lipids- Sudan Black method, Histochemical technique for Alkaline phosphatase.
- 11. Microscopes** 86 - 91
Introduction, Types of microscopes, Principle, Light microscope, Parts of compound microscope, Magnification, Resolving Power, Electron microscope, Principles, Difference between L.M. and E.M.
- 12. Micrometry** 92 - 99
Measurement of Micro-object, Units of measurement, SI units.
- 13. Camera lucida** 100 - 104
Meaning of camera lucida and its use, Principle, Parts of camera lucida, Working of camera lucida, Advantages of using a camera lucida, Types of camera lucida.

SECTION - II ELEMENTARY IDEA OF MICROBIOLOGY

- 14. Introduction to Microbiology** 107 - 119
Introduction, Culturing of Micro-organisms, Culture media, Culture Methods, Inoculation, staining of bacteria, Gram's staining method, Brief idea of *Pneumococci*, *Mycobacterium tuberculosis*, *Mycobacterium leprae* and *Rickettsiae*.

SECTION - III MUSEOLOGY

- 15. Narcotization** 123 - 131
Introduction, Recommended narcotic agents for different organisms, Some commonly used narcotic agents, their properties and methods of use.
- 16. Collection and preservation of specimens.** 132 - 137
Certain important techniques, Preservation of specimens, Transparency techniques- Alizarine preparations, Preservation of Frog tadpoles, Whole -mount preparation- Chick embryos.

- 17. Taxidermy** 138 - 148
Introduction , Various techniques of stuffing, Procedure of stuffing, Preliminary steps, skinning, Preservation of skin and curing, Mounting, Assembling a specimen for display, Completing a specimen.

SECTION - I V PHOTOGRAPHY

- 18. Principles of photography** 151 - 173
Introduction, Basic requirements for photography, Principles, Anatomy of Camera , Types of Camera , Simple direct- Vision camera , Range-finder camera, Single- lens reflex camera , Twin-lens-reflex camera , Simple miniature camera, Instant- picture camera , Focussing , Aperture, Depth of focus , Depth of field, Types of lenses, Principles of colour photography, Use of Filters, Principles of photomicrography.
- 19. Films** 174 - 190
Nature of the film, Size, Speed of the film, Types of films based on speed of the film and colour sensitivity, Development of the film; Requirements for development and properties of the chemicals used, Processing of the exposed film-Tank development and Tray development, Factors affecting development, Evaluation of the negative.
- 20. Printing papers** 191 - 195
Nature, Types of papers- Contrast grades, surface finish and texture.
- 21. Print-making** 196 - 205
Introduction , Principle, Contact printing, Construction and Working of Enlarger, Enlargement.

SECTION-V PHYSIOLOGY EXPERIMENTS

- 22. General Qualitative Tests** 209 - 212
Test for Proteins, Carbohydrates, Lipids , Test for Vitamin A and Vitamin C.
- 23. Haematological Experiments** 213 - 270
Determination of Blood Groups, Preparation of Haemin crystals, Determination of Clotting time, Determination of Bleeding time, R.B.C count, Estimation of Haemoglobin percentage, Effect of isotonic, hypotonic and hypertonic saline solution on R.B.C., Determination of Erythrocyte Sedimentation rate (ESR). W.B.C. count- Total Leucocyte Count (T L C), Differential Leucocyte Count- (D L C).

24. Experiments based on various physiological processes

271 - 309

Digestion

Demonstration of action of Salivary Amylase, Demonstration of action of Pepsin on Proteins, Demonstration of action of Trypsin on Proteins.

Circulation

Recording of heart beats of frog in situ by Kymograph, effects of certain drugs on the cardiac cycle.

Respiration

Determination of rate of oxygen consumption in frog or rat.

Excretion

Normal and abnormal constituents of Urine, Tests for Urea, Uric acid, Albumen, Sugar, Ketone bodies, Bile and Blood.

Reflex action

Study of Reflex action in frog.

Reproduction

Semen Analysis, Determination of Sperm Count, Sperm Motility, Sperm Morphology, Elementary idea of prenatal diagnosis -Amniocentesis.

SECTION- VI ENDOCRINOLOGY

25. Endocrine glands of Mammals

313 - 338

Histological Study of Endocrine Glands of Rat, Pineal, Pituitary, Thyroid, Parathyroid, Thymus, Pancreas, Adrenal, Testis, Ovary and Types of Placenta.

Surgical procedures-

Extirpation of certain Endocrine glands, Thyroidectomy, Adrenalectomy and Ovariectomy.
