Foreword XVII

Preface XXI

List of Authors XXIII

1	Photoremovable Protecting Groups Used for the Caging of Biomolecules 1
1.1	2-Nitrobenzyl and 7-Nitroindoline Derivatives 1 <i>John E. T. Corrie</i>
1.1.1	Introduction 1
1.1.1.1	Preamble and Scope of the Review 1
1.1.1.2	Historical Perspective 2
1.1.2	Synthetic Considerations 3
1.1.3	Survey of Individual Caged Compounds and Caging Groups 5
1.1.3.1	2-Nitrobenzyl Cages 5
1.1.3.1.1	Mechanistic Aspects of Photocleavage and By-Product Reactions of 2-Nitrobenzyl Cages 6
1.1.3.1.2	Representative Survey of Nitrobenzyl-Caged Compounds 11
1.1.3.2	7-Nitroindoline Cages 21
1.1.3.2.1	Mechanistic and Structural Aspects of Photochemical Cleavage of 1-Acyl-7-nitroindolines 21
1.1.3.2.2	Survey of 7-Nitroindoline Caged Compounds 22
1.1.4	Conclusion 24
	References 25
1.2	Coumarin-4-ylmethyl Phototriggers 29 <i>Toshiaki Furuta</i>
1.2.1	Introduction 29
1.2.2	Spectroscopic and Photochemical Properties 30
1.2.2.1	Overview 30
1.2.2.2	Phototriggers 33
1.2.2.2.1	MCM Groups: 7-Alkoxy-Substituted Coumarins 33
1.2.2.2.2	DMCM Groups: 6,7-Dialkoxy-Substituted Coumarins 34

1.2.2.2.3	Bhc Groups: 6-Bromo-7-alkoxy-Substituted Coumarins	34
1.2.2.2.4	DEACM Groups: 7-Dialkylamino-Substituted Coumarins	35
1.2.2.3	Target Molecules	36
1.2.2.3.1	Phosphates	36
1.2.2.3.2	Carboxylates and Sulfates	41
1.2.2.3.3	Amines	43
1.2.2.3.4	Alcohols and Phenols	44
1.2.2.3.5	Carbonyl Compounds	46
1.2.3	Synthesis	46
1.2.3.1	Synthesis of Precursor Molecules (Caging Agents)	46
1.2.3.1.1	Phosphates	49
1.2.3.1.2	Carboxylates	50
1.2.3.1.3	Amines	50
1.2.3.1.4	Alcohols and Phenols	50
1.2.4	Applications	50
1.2.5	Conclusion and Perspective	53
	References	54
1.3	<i>p</i> -Hydroxyphenacyl: a Photoremovable Protecting Group for Caging Bioactive Substrates	55
	<i>Richard S. Givens and Abraham L. Yousef</i>	
1.3.1	Introduction and History	55
1.3.2	<i>p</i> -Hydroxyphenacyl	57
1.3.2.1	General Physical and Spectroscopic Properties	59
1.3.2.2	Synthesis of <i>p</i> HP-Caged Substrates	60
1.3.3	Mechanistic Studies	64
1.3.3.1	A Triplet "Photo-Favorskii" Rearrangement	64
1.3.3.2	Role of the Triplet Phenol	65
1.3.3.3	Correlation of the 3pK_a with the Quantum Efficiency	65
1.3.4	Applications	66
1.3.4.1	Neurotransmitter Release	66
1.3.4.2	Peptide Release	68
1.3.4.3	Nucleotide Release	70
1.3.4.4	Enzyme Photoswitches	72
1.3.5	Advantages and Limitations	74
	References	75
1.4	Caging of ATP and Glutamate: a Comparative Analysis	76
	<i>Maurice Goeldner</i>	
1.4.1	Introduction	76
1.4.2	General Properties for Caging Groups	76
1.4.3	Caged-ATP	78
1.4.3.1	Introduction	78
1.4.3.2	Syntheses of the P^3 -caged ATP Derivatives	78
1.4.3.3	General Properties of the Caged-ATP Molecules	80
1.4.3.4	Conclusion	84
1.4.4	Caged Glutamate	84

1.4.4.1	Introduction	84
1.4.4.2	Syntheses of the Caged Glutamate Derivatives	86
1.4.4.3	General Properties of the Caged-Glutamate Molecules	91
1.4.4.4	Conclusion	92
	Abbreviations	92
	References	93
2	Mechanistic Overview of Phototriggers and Cage Release	95
	<i>Richard S. Givens, Mani B. Kotala, and Jong-Il Lee</i>	
2.1	Introduction	95
2.2	Major Photoremovable Protecting Groups	96
2.2.1	2-Nitrobenzyl (2-NB)	96
2.2.1.1	The Reactive Excited State	98
2.2.1.2	The <i>aci</i> -Nitro Intermediate	99
2.2.1.3	Decay of the <i>aci</i> -Nitro Intermediate	100
2.2.1.4	The Role of the Leaving Group: Alcohols vs ATP	101
2.2.2	Benzoin (Bnz)	101
2.2.2.1	Excitation: Singlet vs Triplet State Reactivity	103
2.2.2.2	Heterolysis vs Homolysis	105
2.2.3	Phenacyl (pHP)	109
2.2.3.1	Singlet vs Triplet Excited States	111
2.2.3.2	DFT Calculations on Excited Triplet State Reactivity	113
2.2.3.3	Deprotonation Step	114
2.2.3.4	Fate of the Spirodienedione Intermediate	116
2.2.3.5	Effect of Meta Substituents	117
2.2.3.6	Quantum Efficiency, Rate Constant, and Solvent Isotope Effect Determinations	117
2.2.4	Benzyl (Bz), Arylmethyl, and Coumaryl (Cou)	118
2.2.4.1	The Meta/Ortho-Meta Effect	118
2.2.4.2	Heterolysis vs Homolysis	121
2.2.4.3	Arylmethyl and Coumaryl (Cou) Derivatives	122
2.3	Conclusions	125
	Abbreviations	127
	References	128
3	Caged Compounds and Solid-Phase Synthesis	131
	<i>Yoshiro Tatsu, Yasushi Shigeri, and Noboru Yumoto</i>	
3.1	Introduction	131
3.2	Solid-Phase Synthesis and Photolysis of Peptides	131
3.2.1	General Overview of Solid-Phase Peptide Synthesis	131
3.2.1.1	The Protecting Group in Solid-Phase Peptide Synthesis	132
3.2.1.2	Formation of Peptide Fragments	133
3.2.1.3	Purification and Identification	134
3.2.2	Photolysis of Peptides	135
3.2.2.1	Photocleavable Protecting Groups in Peptide Synthesis	135

3.2.2.1.1	Amino Protection	135
3.2.2.1.2	Protection of Other Functional Groups	137
3.2.2.1.3	Photocleavable Linkers	139
3.2.2.1.4	Photoremovable Scaffolds for Acyl Transfer	141
3.2.2.2	Photolysis of 2-Nitrobenzyl Groups Bound to Peptides	143
3.3	Synthesis of Caged Peptides	144
3.3.1	Design of Caged Peptides	144
3.3.2	Case Studies on Solid-Phase Synthesis of Caged Peptides	144
3.3.2.1	Neuropeptide Y	145
3.3.2.2	RS-20	147
3.3.2.3	AIP	147
3.3.2.4	Nuclear Localization Signal	147
3.3.2.5	S-Peptides	147
3.3.2.6	Sperm-Activating Peptides	148
3.3.2.7	Caged Phosphopeptides	148
3.3.3	Caged Peptides Using Other Synthetic Methods	149
3.4	Synthesis of Other Photoactive Biomolecular Compounds	150
3.4.1	Thioxo Peptides	150
3.4.2	Photochromic Peptides	151
3.4.3	Photoaffinity Peptides	151
3.5	Conclusions and Perspective	153
	References	153
4	Control of Cellular Activity	155
4.1	Photochemical Release of Second Messengers –	
	Caged Cyclic Nucleotides	155
	<i>Volker Hagen, Klaus Benndorf, and U. Benjamin Kaupp</i>	
4.1.1	Introduction	155
4.1.2	Overview of Phototriggers for cNMPs	156
4.1.2.1	<i>ortho</i> -Nitrobenzyl Derivatives	156
4.1.2.2	(Coumarin-4-yl)methyl Derivatives	160
4.1.2.3	Others	165
4.1.2.4	Selection of the Most Useful Phototriggers	166
4.1.3	Applications of Caged Cyclic Nucleotides	168
4.1.3.1	Cyclic Nucleotide-Gated (CNG) Channels	168
4.1.3.2	HCN Channels	172
4.1.3.3	Dorsal Root Ganglion Cells	172
4.1.3.4	cGMP-Signaling Pathway in Sperm	173
4.1.3.5	Miscellaneous Systems	174
	References	176
4.2	Photochemical Release of Second Messengers –	
	Caged Nitric Oxide	178
	<i>Christopher M. Pavlos, Hua Xu, and John P. Toscano</i>	
4.2.1	Introduction	178
4.2.2	Photosensitive Precursors to Nitric Oxide	179

4.2.2.1	Endogenous Photosensitive Precursors to Nitric Oxide	179
4.2.2.1.1	S-Nitrosothiols	180
4.2.2.1.2	N-Nitrosoamines (Nitrosamines)	181
4.2.2.2	Inorganic Photosensitive Precursors to Nitric Oxide	182
4.2.2.2.1	Nitric Oxide-Metalloprotein Adducts	182
4.2.2.2.2	Sodium Nitroprusside (SNP)	182
4.2.2.2.3	Roussin's Red and Black Salts (RRS, RBS)	184
4.2.2.2.4	Other Iron-based Photosensitive Precursors	186
4.2.2.2.5	Ruthenium-based Photosensitive Precursors	186
4.2.2.2.6	Chromium-based Photosensitive Precursors	188
4.2.2.2.7	Molybdenum-based Photosensitive Precursors	189
4.2.2.3	Organic Photosensitive Precursors to Nitric Oxide	189
4.2.2.3.1	Organic Nitrites	189
4.2.2.3.2	Aromatic Nitro Compounds	190
4.2.2.3.3	Furoxans	191
4.2.2.3.4	Linsidomine (SIN-1)	192
4.2.2.3.5	Phenyl <i>N</i> - <i>tert</i> -Butyl Nitron	192
4.2.2.3.6	Dialkylamino-based Diazeniumdiolates	193
4.2.2.3.7	Carbon-based Diazeniumdiolates	198
4.2.2.3.8	Bis- <i>N</i> -nitroso- <i>p</i> -phenylenediamine Derivatives	198
4.2.3	Conclusions	200
	References	201
4.3	Photochemical Release of Neurotransmitters – Transient Kinetic Investigations of Membrane-bound Receptors on the Surface of Cells in the Microsecond-to-Millisecond Time Region	205
	<i>George P. Hess</i>	
4.3.1	Introduction	205
4.3.2	Cell Flow Technique	209
4.3.3	Photochemical Properties of Caged Neurotransmitters	212
4.3.4	Laser Pulse Photolysis Technique	213
4.3.5	Determination of the Rate and Equilibrium Constants of the Channel-Opening Mechanism	219
4.3.6	Comparison of the Values Obtained for the Rate and Equilibrium Constants of the Channel-Opening Process Using Independent Techniques	219
4.3.7	Summary	224
	References	226
4.4	Caged Neurotransmitters for Probing Neuronal Circuits, Neuronal Integration, and Synaptic Plasticity	232
	<i>Deda C. Gillespie, Gunsoo Kim, and Karl Kandler</i>	
4.4.1	Introduction	232
4.4.2	Functional Mapping of Neuronal Connections	232
4.4.2.1	Example: Uncaging Glutamate to Map Local Connections in the Mammalian Cortex	235

4.4.2.2	Example: Use of Caged Glutamate for Probing Refinement of Neuronal Connectivity	238
4.4.2.3	Conclusions and Future Challenges	239
4.4.3	Probing Neuronal Integration	239
4.4.3.1	Examples	240
4.4.3.2	Conclusions and Future Challenges	243
4.4.4	Investigating Synaptic Plasticity	243
4.4.5	Conclusions and Future Challenges	246
	References	246
5	Photoregulation of Proteins	253
5.1	Light-activated Proteins: An Overview	253
	<i>Sandra Loudwig and Hagan Bayley</i>	
5.1.1	Introduction	253
5.1.2	The Properties of Caged Proteins	254
5.1.2.1	Extents of Caging and Photoactivation	254
5.1.2.2	The Rate of Uncaging: Continuous Irradiation	254
5.1.2.3	The Rate of Uncaging: Breakdown of Intermediates	270
5.1.2.4	The Effects of pH on Photolysis	270
5.1.2.5	Problems with the Released Caging Group	271
5.1.2.6	Photochemistry Peculiar to Proteins	272
5.1.2.7	Polypeptide Chain Cleavage	273
5.1.2.8	Dominant Negative Effect	274
5.1.3	Sites of Modification in Caged Proteins	274
5.1.3.1	Random Modification	274
5.1.3.2	Active-site Directed Modification	275
5.1.3.3	The Use of Crosslinkers	276
5.1.3.4	Caging at Cys Residues	277
5.1.3.5	Sites other than Cys for Site-specific Modification	279
5.1.3.6	Reagents for Caging by Protein Modification	280
5.1.3.7	Determining the Extent of Protein Modification	281
5.1.3.8	True Residual Activity	282
5.1.3.9	Incomplete Uncaging	282
5.1.3.10	Means of Caging other than Chemical Modification	283
5.1.4	Applications of Caged Proteins	284
5.1.5	Future Prospects	284
5.1.5.1	Turning Proteins On and Off	284
5.1.5.2	Genetically Encoded Caged Proteins and Caging within Cells	294
5.1.5.3	Improved Spatial Control	295
5.1.5.4	Temporal Control	296
5.1.5.5	Medical Applications	297
	References	299

5.2	Photochemical Enzyme Regulation using Caged Enzyme Modulators	304
	<i>Ling Peng and Maurice Goeldner</i>	
5.2.1	Introduction	304
5.2.2	Photoregulation of ATPases	305
5.2.2.1	ATPases using Caged ATP Molecules	305
5.2.2.1.1	Na,K-ATPase	305
5.2.2.1.2	Transport ATPases and Carriers	305
5.2.2.1.3	Molecular Motors	306
5.2.2.2	Ca ²⁺ -ATPase	307
5.2.2.2.1	Ca ²⁺ -ATPase using Caged ATP	307
5.2.2.2.2	Ca ²⁺ -ATPase using Caged Inhibitor	307
5.2.2.2.3	Ca ²⁺ -ATPase using Caged Ca ²⁺	308
5.2.3	Photoregulation of GTPases: Ras Protein	308
5.2.3.1	Time-resolved Crystallographic Studies with Caged GTP	308
5.2.3.2	Time-resolved FTIR Studies with Caged GTP	309
5.2.4	Photoregulation of Kinases	310
5.2.4.1	cAMP-dependent Protein Kinase	310
5.2.4.1.1	PKA using Caged cAMP	311
5.2.4.1.2	PKA using Caged Inhibitor	312
5.2.4.2	PKC	312
5.2.4.2.1	PKC using Caged Activators	312
5.2.4.2.2	PKC using Caged Fluorescent Substrates	312
5.2.4.3	Calmodulin-dependent Protein Kinases	313
5.2.4.3.1	Myosin Light Chain Kinase (MLCK) using Caged Peptide Inhibitors	313
5.2.4.3.2	Calmodulin-dependent Protein Kinase II (CaMKII) using Caged Peptide Inhibitors	313
5.2.5	Photoregulation of Alcohol Dehydrogenases	314
5.2.5.1	Isocitrate Dehydrogenase (IDH): Caged NAD and NADP	314
5.2.5.2	Glucose-6-Phosphate Dehydrogenase (G6PDH): Caged Glucose 6-Phosphate and Caged NADP	315
5.2.5.3	7 α -Hydroxy Steroid Dehydrogenase (7-HSDH): Caged Cholic Acid	315
5.2.5.4	Caged Benzyl Alcohol	317
5.2.6	Photoregulation of Cholinesterases	317
5.2.6.1	Caged Choline Derivatives	317
5.2.6.2	Caged Cholinesterase Substrate	318
5.2.7	Miscellaneous Examples of Caged Enzyme Modulators	320
5.2.7.1	Caged Nitric Oxide Synthase (NOS) Inhibitor	320
5.2.7.2	Caged Substrate of Quinol-oxidizing Enzymes	321
5.2.7.3	Caged Urease Substrate	322
5.2.7.4	Caged Ribonuclease Reductase Substrate	322
5.2.8	Conclusions and Perspectives	323
	References	323

5.3	The Use of Caged Proteins in Cell-based Systems	325
	<i>John S. Condeelis and David S. Lawrence</i>	
5.3.1	Introduction	325
5.3.2	Cell Motility	326
5.3.2.1	β -Thymosin	326
5.3.2.2	Cofilin	328
5.3.3	Electrical Conductance	330
5.3.3.1	Antibodies	330
5.3.3.2	Ion Channels	332
5.3.4	Embryogenesis	335
5.3.5	Protein Trafficking	336
5.3.6	Signal Transduction	337
5.3.7	Bacterial Exotoxins	338
5.3.8	Summary and Conclusions	339
	References	340
6	Photoremovable Protecting Groups in DNA Synthesis and Microarray Fabrication	341
	<i>Michael C. Pirrung and Vipul S. Rana</i>	
6.1	Introduction	341
6.2	Photoremovable Groups used in Conventional Nucleic Acid Synthesis	341
6.3	The Photolithographic Method for Microarray Fabrication	348
6.3.1	Background – Polypeptide Microarrays	350
6.3.2	Early DNA Microarray Studies	351
6.3.3	Methods to Assess Chemical Reactions on DNA Microarrays	353
6.3.4	Protecting Groups	356
6.3.4.1	Nitrobenzyl Groups	357
6.3.4.2	Dimethoxybenzoin Carbonate Groups	358
6.3.4.3	(Nitrophenylpropyloxy)carbonyl Groups	360
6.3.4.4	Other Photoremovable Protecting Groups	362
6.3.4.5	Photoacids with DMTr Groups	363
6.4	The Future	364
6.4.1	Multiphoton Sensitive Protecting Groups	365
6.4.2	Direct Write Microarray Fabrication Systems	365
	References	367
7	Analytical Time-resolved Studies using Photochemical Triggering Methods	369
7.1	Time-resolved IR Spectroscopy with Caged Compounds: An Introduction	369
	<i>Andreas Barth</i>	
7.1.1	IR Spectroscopy	369
7.1.1.1	Introduction	369
7.1.1.2	Information that can be Derived from the IR Spectrum	371

7.1.1.3	Instrumentation	371
7.1.1.3.1	Fourier Transform IR (FTIR) Spectroscopy	371
7.1.1.3.2	Dispersive IR Spectrometers	372
7.1.1.3.3	IR Samples	373
7.1.1.4	Time-resolved IR spectroscopy	373
7.1.1.4.1	Overview	373
7.1.1.4.2	The Rapid Scan Technique	373
7.1.1.4.3	The Step Scan Technique	373
