

Contents

Preface xix

1 Introduction 1

- 1.1 The Role of Transport Processes in Biological Systems 1
- 1.2 Definition of Transport Processes 2
 - 1.2.1 Diffusion 2
 - 1.2.2 Convection 5
 - 1.2.3 Transport by Binding Interactions 8
- 1.3 Relative Importance of Convection and Diffusion 9
- 1.4 Transport within Cells 11
 - 1.4.1 Transport across the Cell Membrane 13
 - 1.4.2 Transport within the Cell 16
- 1.5 Transcellular Transport 17
 - 1.5.1 Junctions between Cells 19
 - 1.5.2 Epithelial Cells 20
 - 1.5.3 Endothelial Cells 21
- 1.6 Physiological Transport Systems 23
 - 1.6.1 Cardiovascular System 23
 - 1.6.2 Respiratory System 29
 - 1.6.3 Gastrointestinal Tract 34
 - 1.6.4 Liver 36
 - 1.6.5 Kidneys 38
 - 1.6.6 Integrated Organ Function 40
- 1.7 Application of Transport Processes in Disease Pathology, Treatment, and Device Development 40
 - 1.7.1 Transport Processes and Atherosclerosis 40
 - 1.7.2 Transport Processes and Cancer Treatment 43
 - 1.7.3 Transport Processes, Artificial Organs, and Tissue Engineering 44
- 1.8 Relative Importance of Transport and Reaction Processes 46
- 1.9 Questions 47
- 1.10 Problems 48
- 1.11 References 50

Part I Introduction to Physiological Fluid Mechanics 51

2 Conservation Relations and Momentum Balances 53

- 2.1 Introduction 53
- 2.2 Fluid Kinematics 53
 - 2.2.1 Control Volumes 54
 - 2.2.2 Velocity Field 54
 - 2.2.3 Flow Rate 56
 - 2.2.4 Acceleration 57
 - 2.2.5 Streamlines, Streamtubes, and Streaklines 58
- 2.3 Conservation Relations and Boundary Conditions 62
 - 2.3.1 Conservation of Mass 62
 - 2.3.2 Momentum Balances 63
 - 2.3.3 Forces 63
 - 2.3.4 Boundary Conditions 65
- 2.4 Fluid Statics 67
 - 2.4.1 Static Equilibrium 67
 - 2.4.2 Surface Tension 70
 - 2.4.3 Membrane and Cortical Tension 72
- 2.5 Constitutive Relations 74
 - 2.5.1 Newton's Law of Viscosity 74
 - 2.5.2 Non-Newtonian Rheology 76
 - 2.5.3 Time-Dependent Viscoelastic Behavior 79
- 2.6 Laminar and Turbulent Flow 83
- 2.7 Application of Momentum Balances 87
 - 2.7.1 Flow Induced by a Sliding Plate 87
 - 2.7.2 Pressure-Driven Flow through a Narrow Rectangular Channel 90
 - 2.7.3 Pressure-Driven Flow through a Cylindrical Tube 93
 - 2.7.4 Pressure-Driven Flow of a Power Law Fluid in a Cylindrical Tube 96
 - 2.7.5 Flow between Rotating Cylinders 97
- 2.8 Rheology and Flow of Blood 102
 - 2.8.1 Measurement of Blood Viscosity 102
 - 2.8.2 Rheology of Blood Flow in Large Vessels 103
 - 2.8.3 Blood Flow in Small Tubes 106
 - 2.8.4 Blood Flow in Capillaries 109
 - 2.8.5 Regulation of Blood Flow 110

- 2.9 Questions 112
- 2.10 Problems 112
- 2.11 References 116

3 Conservation Relations for Fluid Transport, Dimensional Analysis, and Scaling 118

- 3.1 Introduction 118
- 3.2 Differential Form of the Equation of Conservation of Mass in Three Dimensions 119
 - 3.2.1 General Form of the Equation of Conservation of Mass 119
 - 3.2.2 Conservation of Mass for Incompressible Fluids 121
- 3.3 Differential Form of the Conservation of Linear Momentum and Navier–Stokes Equation in Three Dimensions 123
 - 3.3.1 General Form of the Equation of Conservation of Linear Momentum 123
 - 3.3.2 The Navier–Stokes Equation for an Incompressible Newtonian Fluid 129
- 3.4 Fluid Motion with More than One Dependent Variable 134
 - 3.4.1 Two-Dimensional Flow in a Channel 135
 - 3.4.2 Time Required to Establish Steady Flow in a Rectangular Channel 139
- 3.5 Dimensional Analysis and Dimensionless Groups 144
 - 3.5.1 Dimensional Analysis 144
 - 3.5.2 Dimensionless Form of the Navier–Stokes Equation 147
 - 3.5.3 Dimensional Analysis and Dynamic Similarity 148
- 3.6 Low Reynolds-Number Flow 151
 - 3.6.1 Conservation Relations for Low Reynolds-Number Flow 151
 - 3.6.2 Low Reynolds-Number Flow around a Sphere 153
- 3.7 Questions 160
- 3.8 Problems 161
- 3.9 References 166

4 Approximate Methods for the Analysis of Complex Physiological Flow 167

- 4.1 Introduction 167
- 4.2 Integral Form of the Equation of Conservation of Mass 168
- 4.3 Integral Form of the Equation of Conservation of Linear Momentum 171

- 4.4 Bernoulli's Equation 174
 - 4.4.1 Bernoulli's Equation Applied to Stenotic Heart Valves 179
 - 4.4.2 The Engineering Bernoulli Equation: The Effects of Viscous Losses and Time-Dependent Energy Changes 181
- 4.5 Boundary Layer Theory 184
 - 4.5.1 Background to Boundary Layer Theory 184
 - 4.5.2 Derivation of the Boundary Layer Equations 185
 - 4.5.3 Integral Momentum Equations for Boundary Layer Flows 189
- 4.6 Flow Separation 192
- 4.7 Lubrication Theory 195
- 4.8 Peristaltic Pumping 203
- 4.9 Questions 207
- 4.10 Problems 207
- 4.11 References 210

5 Fluid Flow in the Circulation and Tissues 211

- 5.1 Introduction 211
- 5.2 Oscillating Flow in a Cylindrical Tube 213
- 5.3 Entrance Lengths 224
- 5.4 Flow in Curved Vessels 224
- 5.5 Flow in Branching Vessels 228
- 5.6 Flow in Specific Arteries 230
 - 5.6.1 Carotid Artery 232
 - 5.6.2 Aorta 233
 - 5.6.3 Effect of Vessel Wall Elasticity 234
 - 5.6.4 Coronary Arteries 235
- 5.7 Arterial Fluid Dynamics and Atherosclerosis 236
 - 5.7.1 Hemodynamic Variables Associated with Atherosclerosis 237
 - 5.7.2 Effect of Hemodynamics upon Endothelial Cell Function 240
- 5.8 Heart-Valve Hemodynamics 242
 - 5.8.1 Artificial Heart Valves 242
 - 5.8.2 Turbulent Flow around Heart Valves 243
- 5.9 Fluid Dynamic Effects of Reconstructive Surgery for Congenital Heart Defects 247
- 5.10 Questions 249
- 5.11 Problems 249
- 5.12 References 251

Part II Fundamentals and Applications of Mass Transport in Biological Systems 255

6 Mass Transport in Biological Systems 257

- 6.1 Introduction 257
- 6.2 Solute Fluxes in Mixtures 257
 - 6.2.1 The Dilute-Solution Assumption 260
- 6.3 Conservation Relations 261
 - 6.3.1 Equation of Conservation of Mass for a Mixture 261
 - 6.3.2 Boundary Conditions 262
- 6.4 Constitutive Relations 263
 - 6.4.1 Fick's Law of Diffusion for Dilute Solutions 263
 - 6.4.2 Diffusion in Concentrated Solutions 264
- 6.5 Diffusion as a Random Walk 266
- 6.6 Estimation of Diffusion Coefficients in Solution 270
 - 6.6.1 Transport Properties of Proteins 271
 - 6.6.2 The Stokes-Einstein Equation 272
 - 6.6.3 Estimation of Frictional Drag Coefficients 274
 - 6.6.4 The Effects of Actual Surface Shape and Hydration 277
 - 6.6.5 Correlations 281
- 6.7 Steady-State Diffusion in One Dimension 282
 - 6.7.1 Diffusion in Rectangular Coordinates 282
 - 6.7.2 Radial Diffusion in Cylindrical Coordinates 291
 - 6.7.3 Radial Diffusion in Spherical Coordinates 293
- 6.8 Unsteady Diffusion in One Dimension 295
 - 6.8.1 One-Dimensional Diffusion in a Semi-Infinite Medium 295
 - 6.8.2 One-Dimensional Unsteady Diffusion in a Finite Medium 305
 - 6.8.3 Model of Diffusion of a Solute into a Sphere from a Well-Stirred Bath 313
 - 6.8.4 Quasi-Steady Transport Across Membranes 317
- 6.9 Diffusion-Limited Reactions 321
 - 6.9.1 Diffusion-Limited Binding and Dissociation in Solution 322
 - 6.9.2 Diffusion-Limited Binding between a Cell Surface Protein and a Solute 323
 - 6.9.3 Diffusion-Limited Binding on a Cell Surface 326
- 6.10 A Thermodynamic Derivation of Stokes-Einstein Equation 328
- 6.11 Questions 330
- 6.12 Problems 331
- 6.13 References 336

7 Diffusion with Convection or Electrical Potentials 338

- 7.1 Fick's Law of Diffusion and Solute Flux 339
- 7.2 Conservation of Mass for Dilute Solutions 339
 - 7.2.1 Transport in Multicomponent Mixtures 344
- 7.3 Dimensional Analysis 347
- 7.4 Electrolyte Transport 349
 - 7.4.1 Nernst-Planck Equation 349
 - 7.4.2 Electrolyte Transport across Membranes 355
- 7.5 Diffusion and Convection 361
 - 7.5.1 Release from the Walls of a Channel: A Short-Contact-Time Solution 362
 - 7.5.2 Momentum and Concentration Boundary Layers 368
- 7.6 Macroscopic Form of Conservation Relations for Dilute Solutions 370
- 7.7 Mass Transfer Coefficients 372
- 7.8 Mass Transfer across Membranes: Application to Hemodialysis 375
 - 7.8.1 Co-Current Exchange 377
 - 7.8.2 Counter-Current Exchange 378
- 7.9 Questions 384
- 7.10 Problems 385
- 7.11 References 386

8 Transport in Porous Media 387

- 8.1 Introduction 387
- 8.2 Porosity, Tortuosity, and Available Volume Fraction 389
- 8.3 Fluid Flow in Porous Media 398
 - 8.3.1 Darcy's Law 398
 - 8.3.2 Brinkman Equation 405
 - 8.3.3 Squeeze Flow 408
- 8.4 Solute Transport in Porous Media 412
 - 8.4.1 General Considerations 412
 - 8.4.2 Effective Diffusion Coefficient in Hydrogels 414
 - 8.4.3 Effective Diffusion Coefficient in a Liquid-Filled Pore 415
 - 8.4.4 Effective Diffusion Coefficient in Biological Tissues 419
- 8.5 Fluid Transport in Poroelastic Materials 419
- 8.6 Problems 423
- 8.7 References 425

9 Transvascular Transport 427

- 9.1 Introduction 427
- 9.2 Pathways for Transendothelial Transport 428
 - 9.2.1 Continuous Capillaries 429
 - 9.2.2 Fenestrated Capillaries 430
 - 9.2.3 Discontinuous Capillaries 430
- 9.3 Rates of Transvascular Transport 431
 - 9.3.1 Osmotic Pressure 431
 - 9.3.2 Rate of Fluid Flow and Starling's Law of Filtration 435
 - 9.3.3 Rate of Solute Transport and the Kedem-Katchalsky Equation 436
- 9.4 Phenomenological Constants in the Analysis of Transvascular Transport 438
- 9.5 A Limitation of Starling's Law 441
 - 9.5.1 Fluid Filtration in the Steady State 441
 - 9.5.2 A New View of Starling's Law 443
- 9.6 Problems 444
- 9.7 References 447

Part III The Effect of Mass Transport upon Biochemical Interactions 449

10 Mass Transport and Biochemical Interactions 451

- 10.1 Introduction 451
- 10.2 Chemical Kinetics and Reaction Mechanisms 451
 - 10.2.1 Reaction Rates 451
 - 10.2.2 Reaction Mechanisms 454
 - 10.2.3 First-Order Reactions 455
 - 10.2.4 Second-Order Irreversible Reactions 456
 - 10.2.5 Reversible Reactions 462
- 10.3 Sequential Reactions and the Quasi-Steady-State Assumption 463
- 10.4 Enzyme Kinetics 467
 - 10.4.1 Derivation of Michaelis-Menten Kinetics 469
 - 10.4.2 Application of the Quasi-Steady-State Assumption to Enzyme Kinetics 473
 - 10.4.3 Determination of K_M and $R_{\max}$ 474

10.5	Regulation of Enzyme Activity	475
10.5.1	Competitive Inhibition	475
10.5.2	Uncompetitive and Noncompetitive Inhibition	476
10.5.3	Substrate Inhibition	479
10.6	Effect of Diffusion and Convection on Chemical Reactions	480
10.6.1	Reaction and Diffusion in Solution	481
10.6.2	Interphase Mass Transfer and Reaction	483
10.6.3	Intraphase Chemical Reactions	486
10.6.4	Interphase and Intraphase Diffusion and Reaction	490
10.6.5	Observable Quantities and the Effectiveness Factor	492
10.6.6	Transport Effects upon Enzymatic Reactions	495
10.7	Questions	502
10.8	Problems	504
10.9	References	507

11 Cell Surface Ligand–Receptor Kinetics and Molecular Transport within Cells 509

11.1	Receptor–Ligand Binding Kinetics	509
11.2	Determination of Rate Constants for Receptor–Ligand Binding	513
11.3	Deviations from Simple Bimolecular Kinetics	517
11.3.1	Ligand Depletion	518
11.3.2	Two or More Receptor Populations	520
11.3.3	Interconverting Receptor Subpopulations	523
11.4	Receptor-Mediated Endocytosis	525
11.4.1	A Kinetic Model for LDL Receptor-Mediated Endocytosis	529
11.4.2	Receptor Interaction with Coated Pits	533
11.5	Receptor Regulation during Receptor-Mediated Endocytosis	536
11.6	Signal Transduction	541
11.6.1	Qualitative Aspects of Signal Transduction	541
11.6.2	Quantitative Aspects of Signal Transduction	546
11.7	Regulation of Gene Expression	556
11.7.1	Simplified Model for Gene Induction and Expression	558
11.8	Questions	562
11.9	Problems	563
11.10	References	567

12 Cell Adhesion 568

12.1	Introduction	568
12.2	Effect of Force on Bond Association and Dissociation	569

12.2.1	The Influence of Energy Barriers on Molecular Interactions	569
12.2.2	Bond Disruption in the Presence of an Applied Force	571
12.2.3	Bond Formation in the Presence of an Applied Force	571
12.2.4	The Effect of Loading Rates on Bond Forces	572
12.3	Cell-Matrix Adhesion	574
12.3.1	Cell Attachment	576
12.3.2	Cell Detachment	579
12.4	Biophysics of Leukocyte Rolling and Adhesion	588
12.4.1	Overview	588
12.4.2	Modeling Leukocyte-Endothelial Cell Interactions	589
12.4.3	Effect of Cell Deformation on Leukocyte Adhesion to Endothelium	594
12.5	Stochastic Effects on Chemical Interactions	596
12.5.1	Kinetic Analysis of Stochastic Chemical Reactions	596
12.5.2	Monte Carlo Analysis of Stochastic Chemical Reactions	601
12.6	Questions	602
12.7	Problems	602
12.8	References	603

Part IV Transport in Organs 607

13 Transport of Gases between Blood and Tissues 609

13.1	Introduction	609
13.2	Oxygen-Hemoglobin Equilibria	610
13.3	Oxygen-Hemoglobin Binding Kinetics	615
13.4	Dynamics of Oxygenation of Blood in Lung Capillaries	616
13.5	Oxygen Delivery to Tissues	621
13.5.1	The Krogh Cylinder Model of Oxygen Transport in Tissues	621
13.5.2	Analysis of Assumptions Used in Krogh Model	626
13.6	Nitric Oxide Production and Transport in Tissues	630
13.6.1	NO Formation and Reaction	630
13.6.2	NO Formation, Diffusion, and Reaction in Tissues	632
13.7	Questions	636
13.8	Problems	636
13.9	References	638

14 Transport in the Kidneys 639

- 14.1 Introduction 639
- 14.2 Mechanisms of Transmembrane Transport 640
 - 14.2.1 Direct Diffusion 640
 - 14.2.2 Facilitated Transport 644
 - 14.2.3 Active Transport 648
- 14.3 Renal Physiology 648
 - 14.3.1 Renal Blood Flow 648
 - 14.3.2 Urine Formation 651
- 14.4 Quantitative Analysis of Glomerular Filtration 657
 - 14.4.1 Hydraulic Conductivity of Glomerular Capillaries 657
 - 14.4.2 Solute Transport across Glomerular Capillaries 659
- 14.5 Quantitative Analysis of Tubular Reabsorption 665
 - 14.5.1 Mass Balance Equations 666
 - 14.5.2 Fluxes of Passive Diffusion and Convection 668
 - 14.5.3 Goldman–Hodgkin–Katz Equation for Ion Channels 669
 - 14.5.4 Mathematical Modeling of Carrier-Mediated Transport 670
 - 14.5.5 A Mathematical Model of Na^+/K^+ ATPase 680
- 14.6 A Whole-Organ Approach to Renal Modeling 682
 - 14.6.1 Filtration 683
 - 14.6.2 Reabsorption 683
 - 14.6.3 Secretion 684
- 14.7 Problems 685
- 14.8 References 687

15 Drug Transport in Solid Tumors 689

- 15.1 Introduction 689
 - 15.1.1 Drug Delivery in Cancer Treatment 689
 - 15.1.2 Routes of Drug Administration 691
 - 15.1.3 Drug Transport within Solid Tumors 692
- 15.2 Quantitative Analysis of Transvascular Transport 697
- 15.3 Quantitative Analysis of Interstitial Fluid Transport 697
 - 15.3.1 Governing Equations 697
 - 15.3.2 Unidirectional Flow of Fluid at Steady State 698
 - 15.3.3 Unsteady State Fluid Transport 700
- 15.4 Interstitial Hypertension in Solid Tumors 704
 - 15.4.1 Effects of Interstitial Hypertension on Drug and Gene Delivery 704
 - 15.4.2 Etiology of Interstitial Hypertension 706
 - 15.4.3 Strategies for Reducing Interstitial Fluid Pressure 707

- 15.5 Quantitative Analysis of Interstitial Transport of Solutes 709
 - 15.5.1 Governing Equations 709
 - 15.5.2 Unidirectional Transport in a Solid Tumor 710
 - 15.5.3 Unidirectional Transport in the Krogh Cylinder 711
- 15.6 Problems 714
- 15.7 References 716

16 Transport in Organs and Organisms 718

- 16.1 Introduction 718
- 16.2 General Considerations in Pharmacokinetic Analysis 719
- 16.3 Simple Compartment Models in Pharmacokinetic Analysis 720
 - 16.3.1 One-Compartment Model 720
 - 16.3.2 Two-Compartment Model 722
- 16.4 Physiologically Based Pharmacokinetic Models 726
 - 16.4.1 Transport in Individual Organs 726
 - 16.4.2 Physiologically Based Pharmacokinetic Analysis of Methotrexate 728
- 16.5 Allometric Scaling Law and Its Application to Transport Properties 733
 - 16.5.1 Scaling Laws 733
 - 16.5.2 Applications of the Allometric Scaling Law in Pharmacokinetic Analysis 735
- 16.6 Problems 740
- 16.7 References 743

Appendix Mathematical Background 744

- A.1 Review of Calculus and Solution of Ordinary Differential Equations 744
- A.2 Solution of Partial Differential Equations by the Method of Separation of Variables 752
- A.3 Basics of Vectors and Tensors 758
- A.4 Introduction to MATLAB 766
- A.5 References 772

Index 773
